

PCSA-MCG106

6-site MCU software license
for PCS-XG100/77
Videoconferencing System

Overview

Hold crisp, clear multi-point videoconferences with up to five other remote sites.

The PCSA-MCG106 optional license key enables Multi-point Control Unit (MCU) software exclusively for the Sony PCS-XG100/77 Videoconferencing System.

With PCSA-MCG106 MCU software installed, the PCS-XG100/77 can be configured to communicate with up to five remote videoconferencing sites (six sites total) simultaneously, using either an IP (H.323 protocol) or ISDN (H.320 protocol) connection. 'Bridging' allows using any combination of IP and ISDN connections.

Two PCS-XG100/77 units – each installed with PCSA-MCG106 MCU software – can be cascaded to support large-scale multi-point conferences with up to ten sites simultaneously.

Hold multi-point conferences

Work more efficiently and productively: MCU software allows the PCS-XG100/77 to be configured for virtual meetings with up to five remote videoconferencing sites (six sites total).

Use IP or ISDN connections

For maximum flexibility, participants at remote sites can connect using IP (H.323 protocol) or ISDN (H.320 protocol) – or any mix of IP and ISDN connections.

Large-scale conferences with up to ten sites

Two PCS-XG100/77 Videoconferencing Systems can be 'cascaded' (via IP connection), supporting large-scale multi-point conferences with up to ten sites linked simultaneously.

Activation key for pre-installed software.
