CBK-WA01

Wi-Fi Adaptor for use with the XMPilot Planning Metadata Solution

Overview

The CBK-WA01 is a compact Wi-Fi adaptor for use with XDCAM HD422 Camcorders such as the PDW-700, PDW-F800 and PMW-500. When attached to the camcorder, it communicates wirelessly with laptops and other mobile devices running Sony's XDCAM Browser software, and with mobile phones supporting the XMPilot application.

(Wi-Fi capability on supported cameras must be enabled with the CBKZ-UPG01 software key.)

XMPilot extends the XDCAM metadata workflow to directors, location producers, production assistants and camera operators, reducing the length of time it takes to get captured material onair, minimising ingest time, increasing post-production workflow efficiency and adding value to your archives.
