

BKM-31GM

3D circular micro-polariser glasses (clip-on)

Overview

Lightweight clip-on passive polarising 3D glasses for use with LMD-3251MT and LMD-2451MT medical monitors.

Clipping easily on to the wearer's ordinary glasses, these passive circular polarising glasses are designed for use when viewing stereoscopic images on a compatible 3D monitor. They are optimised for the Sony LMD-3251MT and LMD-2451MT.

Light and easy to wear, the BKM-31GM clips directly onto the top of the wearer's normal eyeglasses. It can be simply flipped up when 3D viewing is not required.

The low-distortion polycarbonate lenses minimise transmission of UV light* and are designed to withstand temperature changes and shock in normal operation.

*NB: not suitable for use as sunglasses.
