

TMR-PJ2

External 3D sync transmitter (IR type) for home cinema projectors

Overview

Compatible with Sony home cinema projectors, this wireless transmitter accessory extends the range of 3D sync signals that can be received by viewers wearing TDG-PJ1 active shutter 3D glasses (available separately).

Extending signal transmission range up to 10m, the sync transmitter lets viewers enjoy a superb 3D entertainment experience, even if they're seated further from the screen in larger living rooms or home theatre spaces.

Synchronisation signals are transmitted via infrared to viewers wearing TDG-PJ1 active shutter 3D glasses.

Features

Extend your projector's 3D transmission range

Compatible with all Sony 3D home cinema projectors, the TMR-PJ2 transmits sync signals that are received by viewers wearing TDG-PJ1 active shutter 3D glasses. Transmission range is extended as far as 10m, allowing reliable, high-quality 3D viewing in larger rooms where viewers are further from the screen.

Easy connection and operation

Just plug the TMR-PJ2 into any compatible Sony VPL series home cinema projector. Then start enjoying the show immediately with no set-up or calibration needed. 3D sync

transmitter power is drawn directly from the projector: no batteries or adaptors required.

Wide transmission and reception angle

3D sync signals are transmitted via infrared over a wide angle for comfortable, immersive 3D viewing by everyone in the room.
