

CBKZ-FS5RIF

PXW-FS5 RAW Upgrade

Overview

4K 60p/50p and Continuous 2K 240fps/200fps Output in RAW Format

Sony's 12-bit FS RAW allows user to record 4K (4096x2160) 60p/50p and continuous 2K (2048x1080) 240fps/200fps on an external recorder.

Note: Requires version 2.0 or higher firmware. Since lens compensation is not compliant with RAW output, distortion might appear under specific condition with use of the SELP18105G, part of PXW-FS5K kit lens.

Activation key for pre-installed software.

Features

4K RAW output*

The CBKZ-FS5RIF upgrade licence allows the PXW-FS5 camcorder to output 4K (4096x2160) 12-bit RAW at 23.98p, 25p, 29.97p, 50p and 59.94p, recording to the AXS-R5 external recorder attached with the HXR-IFR5 interface unit (sold separately).

PXW-FS5 requires Version 2.0 firmware or above.

Simultaneous XAVC HD internal recording*

While outputting 4K/2K RAW to the AXS-R5, it is possible to simultaneously record XAVC HD on SD memory cards in the

camcorder's internal dual media slots. One application of this could be that the RAW recording is used for production and XAVC HD for on-set review.

* PXW-FS5 requires Version 2.0 firmware or above.

4K cached RAW output*

Approximately 4 seconds of cached 4K RAW can be output at 100 or 120 fps as 23.98p, 25p, 29.97p, 50p or 59.94p.

* PXW-FS5 requires Version 2.0 firmware or above.

Continuous high speed 2K RAW output*

You can output continuous 2K RAW at 100, 120, 200 or 240 fps as 23.98p, 25p, 29.97p, 50p or 59.94p.

* PXW-FS5 requires Version 2.0 firmware or above.
