

CBK-55F2K

Optical 2K filter for PMW-F55 and PMW-F5

Overview

Creates a better image for 4K or 2K RAW at High Frame Rate (HFR)

The CBK-55F2K is a filter that allows for the reduction of moiré effects during high frame rate, 2K full-scan shooting. The filter provides softer, more organic imagery when shooting in 4K. When shooting HFR in 2K RAW, the filter is designed to create pleasing imagery.

Easy to install

Installed in minutes.

Features

4K and 2K RAW High Frame Rate (HFR) recordings

The filter is designed to reduce moiré effects during high frame rate, 2K full-scan shooting. It also provides a softer image in 4K.

Easy to install

The filter is easy to install, it only takes a few minutes. You can switch back and forth with your existing filter in the camera if necessary.
