

CBK-WA01

Wi-Fi Adaptor for use with the
XMPilot Planning Metadata
Solution

Overview

The CBK-WA01 is a compact Wi-Fi adaptor for use with XDCAM HD422 Camcorders such as the PDW-700, PDW-F800 and PMW-500. When attached to the camcorder, it communicates wirelessly with laptops and other mobile devices running Sony's XDCAM Browser software, and with mobile phones supporting the XMPilot application.

(Wi-Fi capability on supported cameras must be enabled with the CBKZ-UPG01 software key.)

XMPilot extends the XDCAM metadata workflow to directors, location producers, production assistants and camera operators, reducing the length of time it takes to get captured material on-air, minimising ingest time, increasing post-production workflow efficiency and adding value to your archives.
