

## Microphone Array System Manager MASM-1

Free management software  
supporting calibration, settings  
and management of MAS-A100

### Overview

#### **Comprehensive microphone management solution**

Our free software offers a complete management solution for the Beamforming Microphone MAS-A100. The MASM-1 software supports the installation and management of multiple microphones centrally via the local network. The system manager is easy to set up and operate and assists with initial setup, calibration, general settings, operations and firmware management.

The MASM-1 Microphone Array System Manager software will be offered as a free download from this site when available.

### Features

#### **Search and set-up function**

The microphone manager search function discovers microphone(s) in the local area, setting them up and registering them to the microphone manager. You also have the option to group devices together as desired.

#### **Automatic calibration**

The MASM-1 software can seamlessly carry out multiple microphones auto calibration at the same time, in the same room. Each Beamforming Microphone can be individually tuned

and optimised for the parameters of the room with ease.

### **Default settings maintained**

The microphone manager software allocates default settings for the devices when turned on, and when switching from standby to active. Any audio settings are automatically initiated upon startup.

### **Monitor and control status**

The MASM-1 software monitors and controls multiple microphones via the network. Thanks to the centrally controlled software, the workflow and management of your Beamforming Microphone(s) is simple to maintain.
