

## SAL35F14G

G Series 35mm F1.4 G prime lens

### Overview

#### **Fast, versatile prime lens**

With its fast F1.4 aperture and versatile angle of view, this lens can be used for anything from close-ups and portraits to fashion, fine art, and landscapes.

#### **Full frame A-mount**

This 35mm full frame lens works with Sony  $\alpha$  A-Mount cameras, using the LA-EA4 lens adapter for E-Mount cameras.

### Features

#### **See the difference with G Lens**

Renowned for their descriptive power, G Series lenses maintain excellent peripheral light characteristics and maximum contrast even at the edges of the frame.

#### **Say goodbye to blur**

Pair the lens with a camera by Sony with SteadyShot™ inside and you'll enjoy smooth, blur-free results when shooting handheld.

#### **Smooth defocusing**

Instead of a standard polygon-shaped lens aperture, this lens features a 9-blade circular aperture for more natural, rounded defocusing or 'bokeh'.

## Refined optical performance

To optimise performance, aspherical lens elements maintain high contrast (even with the aperture wide open) and minimise distortion and flatness of the image plane.

## Fast, agile focusing

A rear focusing mechanism means the lens barrel doesn't move, enabling a more compact design, faster autofocus response, and reduced minimum focusing distances.
