

TDG-PJ1

3D active shutter glasses (IR type) for home cinema projectors

Overview

Experience superb 3D entertainment with these active shutter glasses that are designed for superb results with Sony home cinema projectors.

The light, easy to wear glasses let viewers enjoy 3D video content in natural, detail-packed Full HD. The active shutter design syncs with alternate images for left and right eyes that are displayed on screen.

Rapid recharging via USB eliminates the need to replace disposable batteries.

Adding extra TDG-PJ1 3D glasses to your Sony home cinema projector allows even more people to enjoy the show.

Enjoy full-resolution 3D images in Full HD

Compatible with all Sony VPL Series 4K and Full HD home cinema projectors, these high-quality active shutter glasses allow uncompromised 3D viewing in Full HD with exceptional brightness, contrast and colour accuracy.

Active shutter design for immersive 3D viewing

The glasses' active shutter design automatically synchronises with signals from the projector. Frame sequential technology alternatively displays Full HD images to left and right eyes for

smooth, immersive, detail-packed 3D viewing with dramatically reduced ghosting.

Light and comfortable to wear

The light, easy to wear glasses are easily adjustable for comfortable viewing by different family members. The glasses can also be worn over normal spectacles.

Enjoy great-looking 3D images from anywhere in the room

High-quality 3D images can be enjoyed over a wider viewing area, in contrast with passive glasses where picture quality deteriorates if you're not sitting directly in front of the screen.
