

REA-L0400

Chromakey-less CG Overlay
License for Edge Analytics
Appliance

Edge Analytics Appliance

Handwriting Extraction
PTZ Auto Tracking
Chromakey-less CG Overlay

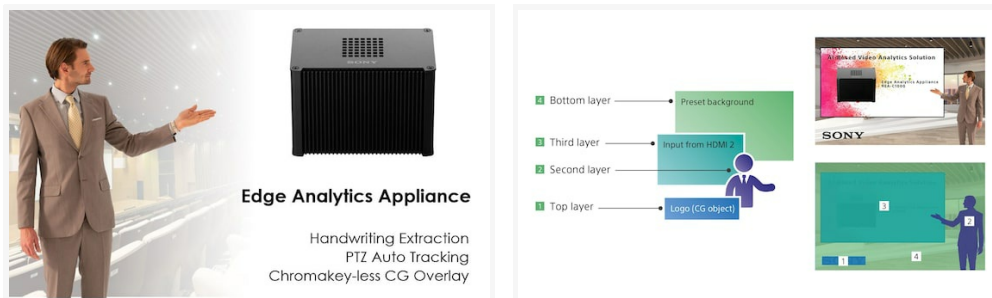

Overview

The REA-L0400 optional license activates the Chromakey-less CG overlay feature for the REA-C1000 Edge Analytics Appliance.

Using Sony's advanced motion detection technology, the presenter's image is extracted and overlaid onto any background image, animation or video in real time - creating a high-quality backdrop without the need for dedicated studio equipment or a specialist graphics operator.

Note: This is an activation key for pre-installed software

The diagram illustrates the layered video processing architecture of the Edge Analytics Appliance. It consists of four layers:

- Bottom layer:** Preset background
- Third layer:** Input from HDMI 2
- Second layer:** Logo (CG object)
- Top layer:** Logo (CG object)

Two inset images show the appliance in use. The top inset shows a presentation screen displaying a 'Mixed Video Analytics Solution' with the Sony logo. The bottom inset shows a person pointing at a screen displaying a video with overlaid analysis markers (1, 2, 3, 4).
