

HKC-FB30

Optical Fibre Transmission Adaptor

Overview

Optical Fibre Transmission Adaptor

The HKC-FB30 is an optional side panel that adds optical fibre connectivity to the Sony HDC-3500H 4K/HD System Camera.

This allows easy exchange between fibre or triax transmission to suit operational requirements. Since all replacement connectors are located within the exchangeable outside panel, camera balance is maintained.

The Sony HDC-3500H 4K/HD System Camera offers exceptional imaging performance, mobility and creative flexibility to satisfy today's demanding live production requirements.
