

BRBK-304

DV card for BRC-300P SD robotic compact camera

Overview

i.LINK optional card that allows i.LINK (DV) output from the BRC-300P camera and BRU-300 optical multiplex unit

The BRBK-304 interface card is designed to be used exclusively with the BRC-300P 3 CCD colour video camera or the BRU-300P optical multiplex unit. The BRBK-304 converts the image shot by the camera into the signal conforming to DV. The i.Link for this unit is especially designed to output signals in DV format and allows direct digital connection to DSR Series DVCAM recording decks and direct streaming to a personal computer.
