MDR-7550

High quality in-ear monitoring headphones for live stage use

1

Overview

Precision made for precision work

Ideally suited for musicians who listen to custom-crafted mixes of vocals and stage instrumentation during live performance, this model utilizes large calibre 16mm dynamic drivers to enable a wide dynamic range with clear and accurate sound reproduction.

The 7550 offers a unique multi-layer diaphragm (comprised of hundreds of layers of polymer, each less than 0.01-micron thick) and a flexible ear hanger made of TEKNOROTE[™] material, which easily folds and maintains its shape, insuring a superior fit for each individual ear. Also included are newly developed hybrid silicone rubber earbuds, with three sizes to fit different ear types.
