

PCSA-B768S

ISDN unit for PCS Series Video Communication System

Overview

This ISDN interface unit is designed for use exclusively with Sony PCS Series Video Communication Systems.

Up to six ISDN lines can be connected (via 12B channels), providing a total bandwidth of 768kbps for multi-point conferences with smooth, crisp sound and picture quality.

Features

Hold conferences over ISDN

Video conferences can be held over standard ISDN lines as an alternative to using a broadband (IP) network connection.

Use up to three ISDN lines simultaneously

Boost your conference bandwidth by connecting up to six ISDN lines via 12B channels. Support for ITU-T H.320 standards gives total available bandwidth of up to 768 kbps via ISDN.

Compatible with Sony PCS Series

The PCSA-B768S is designed for use exclusively with Sony PCS Series Video Communication Systems.
