

PEQA-C20

Remote Communication License

Overview

This PEQA-C20 Remote Communications software license activates the videoconferencing function with PEQ-C100 and PEQ-C130 Vision Exchange main units.

It allows workgroups using Vision Exchange to connect with other sites using traditional standards-based videoconference systems.

An input source (including wirelessly sent images and HDMI images) can be shared with a remote site, together with overlaid annotations or whiteboard images.
