Software for Professional Display power management

Overview

Manage power status of multiple display and projector devices

Easy to use PC software for networked power status control of multiple display devices, including Professional Displays and Sony data projectors.

Controlling meeting room displays normally requires investment in costly control systems. Easy to install and use, this PC software lets organisations benefit from energy savings by simple remote management of power settings for displays and projectors - with no additional control hardware needed.

Power status for individual devices can be controlled manually or by schedule.

Features

Remote display power management
Monitor and control power status of multiple devices (Professional Displays and data projectors) via networked server.

Manual or scheduled operation
Power status for individual devices can be controlled manually or by schedule. Specify power on/off times during the working day, with individual schedules for every day of the week.

Secure Control

Set a key code on each display to prevent operation by unauthorised users.

Easy operation

Software only needs to be installed on a Windows PC to allow display control with no other devices needed.
