

CBKZ-WTCL

Upgrade software key to enable
WIRELESS TC LINK options on
PXW-Z90 and HXR-NX80

Overview

WIRELESS TC LINK

When shooting with multiple camcorders, you can synchronize the timecode of each camcorder using Content Browser Mobile™ (CBM) smartphone application*.

CBM offers two synchronisation methods:

- Set one camcorder as the primary and the other camcorder(s) synchronise to its timecode
- Manually set the timecode you prefer - for example the current time or any alternate value - and all camcorders synchronise to it.

*Version 3.0 Content Browser Mobile™ required which is compatible with iOS 9.0 - 10.3 or Android 4.4 through 7.1.

Activation key for pre-installed software.
