

A-1865-787-A

PMW-F3 modification kit for 2D shooting with zoom lens control

Overview

Cheese plate kit for 2D shooting to improve weight and size of the PMW-F3

The A-1865-787-A modification kit for the PMW-F3K/L Super 35mm CineAlta camcorder improves its flexibility, weight and handling in 2D productions or when shooting with two cameras side-by-side in a 3D rig. The modification is ideal for 2D shooting where size is important. The stripped-down camera body is fitted with a cheese plate with multiple screw holes for accepting mounting plates or camera accessories. It works in conjunction with the SCL-Z18X140 zoom lens. Each kit includes parts to equip one PMW-F3.

Only available through Sony Service channels

The modifications can only be done via Accredited Service Partners or Sony Specialist Dealers that offer the service.
