

REA-L0100

Handwriting Extraction License for Edge Analytics Appliance

Overview

The REA-L0100 optional license activates the handwriting extraction feature for the REA-C1000 Edge Analytics Appliance.

Handwriting extraction uses AR (Augmented Reality) techniques to ensure that words and diagrams written on a white board or black board remain in full view of the audience. Handwritten text, sketches and diagrams are automatically recognised, extracted and displayed as a real-time overlay that 'floats' in front of the presenter. Even if the speaker is standing directly in front of the board, their ideas and thinking processes are always accessible to the audience. Viewers watching the presentation in a far location can become immersed in the content too, as the presenter is overlaid and the content is never compromised. You can download extracted text with JPEG file on the laptop.

Note: This is an activation key for pre-installed software
