

LKRL-A003

Combined 3D Dual Lens and
Polarising Filter System for the
SRX-R320

Overview

Sony 3D system extends choice in the cinema market

To further expand the choice for cinema operators Sony has introduced its new 3D system employing the unique 3D dual lens in combination with Sony 3D polarising filters.

Unlike other systems, Sony Digital Cinema 4K projectors show two images simultaneously. This means triple-flash artefacts are eliminated and motion effects and judder are dramatically reduced, even in high-paced action sequences. The result is a spectacular, immersive 3D experience that will bring audiences back for every new 3D release.

The Sony 3D system is optimised for use in conjunction with the new SRX-R320SP and SRX-R515P projection systems.

Features

Studio approved 3D system

Deliver sensational easy-on-the-eye 3D pictures to your customers

Excellent brightness performance

Minimal ghosting when used with approved glasses
