SONY

HZC-MSCN1

Multi-camera control software
for CNA-1

Overview

Cost effective control for up to 96 Sony system cameras from third party controller

The HZC-MSCN1 multi-camera control software option for the CNA-1 camera control network adaptor allows you to control up to 96 Sony system cameras from a third party controller. This provides very cost effective control of large camera systems and easy installation. Without HZC-MSCN1 software, it would be necessary to have one CNA-1 per camera.

Multi-camera control

Control up to 96 Sony system cameras over an IP network from a third party controller.

Big savings and easy set-up

More cost effective than using standard CNA-1 without HZC-MSCN1 installed.

Activation key for pre-installed software.

Features

Multi-camera control software for CNA-1
The HZC-MSCN1 multi-camera control software for the CNA-1 camera control network adaptor allows you to control up to 96 Sony system cameras from a third party controller, such as Telemetrics, AMX, etc.

Converts Sony 700PTP protocol to Simple Protocol for easy control

CNA-1 can work as a protocol converter, translating Sony cameras' original 700PTP protocol to and from Simple Protocol to allow the cameras to work easily with third party devices. The majority of functions of Sony camera control are included, with a few exceptions for the most complicated protocols.

Add additional cameras and products

The adaptor converts serial protocol to IP protocol, allowing non-network capability products to be connected to a network. If an additional camera chain is required, it can be connected via the CNA-1.
