

BC-DWZ1

**Recharges AA NiMH-type batteries operating with the ZTX-M02RC digital wireless handheld transmitter and ZTX-B02RC digital wireless body-pack transmitter**

The BC-DWZ1 is a contactless recharger, this means you simply place the transmitter into the charging station to recharge NiMH-type batteries. You do not need to physically remove the batteries to recharge them, which saves you time and reduces wear and tear to the transmitters.
