**Table of Contents**

Foreword .................................................................................................................. 8
Before use ................................................................................................................ 8

Chapter 1 : Overview

Features ................................................................................................................... 9

Locations and Functions of Parts and Controls .............................................. 11
- Power supply ....................................................................................................... 11
- Accessory attachments ....................................................................................... 12
- Operating and connectors section .................................................................... 13
- HDVF-20A viewfinder (optional) ....................................................................... 26
- Status display on the viewfinder screen ............................................................ 27

Chapter 2 : Preparations

Preparing a Power Supply .................................................................................... 33
- Using a battery pack ........................................................................................... 33
- Using AC power .................................................................................................. 34

Attaching the Viewfinder ..................................................................................... 34
- Attaching the HDVF-20A/C35W ....................................................................... 34
- Adjusting the viewfinder position ....................................................................... 35
- Moving the viewfinder shoe up .......................................................................... 35
- Using the BKW-401 Viewfinder Rotation Bracket ............................................ 36
- Detaching the eyepiece ...................................................................................... 37
- Adjusting the viewfinder focus and screen ....................................................... 37

Setting the Area of Use ....................................................................................... 38

Setting the Date/Time of the Internal Clock ..................................................... 39

Mounting the Lens ............................................................................................... 40

Adjusting the Flange Focal Length ..................................................................... 41

Preparing the Audio Input System .................................................................. 42
- Connecting a microphone to the MIC IN connector ........................................ 42
- Connecting microphones to the AUDIO IN connectors .............................. 43
- Attaching a UHF portable tuner (for a UHF wireless microphone system) ...... 44
- Connecting line input audio equipment ............................................................ 46

Tripod Mounting ................................................................................................. 47
Connecting a Video Light ................................................................. 48
Using the Shoulder Strap ................................................................. 48
Adjusting the Shoulder Pad Position .................................................. 49
Connecting the Remote Control Unit ............................................... 50

Chapter 3 : Adjustments and Settings for Shooting

Setting the Recording Format .......................................................... 52
  Setting the system frequency ......................................................... 52
  Setting the video recording format ............................................... 52
  Mixed recording of clips in different formats on the same disc ....... 53
Adjusting the Black Balance and the White Balance ...................... 54
  Adjusting the black balance ......................................................... 54
  Adjusting the white balance ....................................................... 55
Setting the Electronic Shutter .......................................................... 59
  Shutter modes ............................................................................ 59
  Selecting the shutter mode and shutter speed ......................... 60
Changing the Reference Value for Automatic Iris Adjustment ....... 62
Adjusting the Audio Level .............................................................. 64
  Manually adjusting the audio levels of the audio inputs from the
    AUDIO IN CH1/CH2 connectors ............................................. 64
  Manually adjusting the audio level of the MIC IN connector ...... 65
  Recording audio on channels 3 and 4 ....................................... 65
Setting the Time Data .................................................................... 67
  Setting the timecode .................................................................. 67
  Setting the user bits .................................................................. 67
  Synchronizing the timecode ....................................................... 68

Chapter 4 : Shooting

Handling Discs .............................................................................. 71
  Discs used for recording and playback ....................................... 71
  Notes on handling .................................................................... 71
  Write-protecting discs .............................................................. 71
  Loading and unloading a disc ..................................................... 72
  Formatting a disc ...................................................................... 73
  Handling of discs when recording does not end normally
    (salvage function) ................................................................. 73
Basic Procedure for Shooting ....................................................... 75
  Playing back the recorded clip .................................................. 77
Deleting the recorded clip ............................................................... 78
Using the Freeze Mix function..................................................... 78

**Advanced Operations for Shooting** ............................................. 79
Recording essence marks ............................................................... 79
Setting clip flags with switches..................................................... 80
Setting the thumbnail image at recording time ......................... 80
Starting a shoot with a few seconds of pre-stored picture data
  (Picture Cache function) ........................................................... 80
Time-lapse video (Interval Rec function) ....................................... 82
Exchanging discs while recording
  (Disc Exchange Cache function) .............................................. 86
Recording with the Clip Continuous Rec function ....................... 87
Retaking the most recent clip........................................................ 87
Assigning user-defined clip titles automatically ......................... 88
Assigning user-defined names to clips and clip lists ..................... 91
Using planning metadata............................................................. 92
Recording video from external devices.................................... 95
Using the Live Logging function .............................................. 96
Recording proxy data ................................................................ 97

**Chapter 5 : Operations in GUI Screens**

**Overview** ................................................................................ 100
Switching between GUI screens ................................................. 100
Information and controls in thumbnail screens ....................... 102
Displaying menus .................................................................... 105
GUI screen operations ............................................................. 109

**Thumbnail Operations** ............................................................. 110
Selecting thumbnails ................................................................ 110
Searching with thumbnails ..................................................... 111
Playing the scene you have found ............................................ 113
Selecting clips by type (Filter Clips function) ......................... 114
Selecting the information displayed on thumbnails ............... 115
Changing clip index pictures..................................................... 115
Checking clip properties ........................................................... 116
Setting clip flags ...................................................................... 119
Locking (write-protecting) clips ........................................... 119
Deleting clips ................................................................. 120

**Scene Selection (Clip List Editing)** ...................................... 121
What is scene selection? ............................................................ 121
Creating and editing clip lists................................................... 122
Managing clip lists ............................................................... 127

**Disc Operations** .................................................................... 129
Checking disc properties ....................................................... 129
Using planning metadata ................................................................. 129
Checking user-defined essence marks .............................................. 131
Formatting discs ............................................................................. 132
Displaying disc and clip properties in a web browser.................... 132

**Transferring clips (Direct FTP function)** ........................................... 136
Preparing clip transfers .................................................................. 137
Uploading clips .............................................................................. 137
Downloading clips ......................................................................... 141
Copying clips directly between XDCAM devices ......................... 141

**Shortcut List** .................................................................................. 143

---

**Chapter 6 : Menu Displays and Detailed Settings**

**Menu Organization** ........................................................................ 144
TOP menu and top-level menus ..................................................... 145

**Menu List** ....................................................................................... 147
OPERATION menu ............................................................................. 147
PAINT menu ..................................................................................... 158
MAINTENANCE menu ...................................................................... 165
FILE menu .......................................................................................... 183
DIAGNOSIS menu ........................................................................... 187

**Menu Operations** .......................................................................... 189
Displaying menus ............................................................................ 189
Basic menu operations ................................................................... 189
Using the USER menu (example menu operation) ....................... 192
Editing the USER menu .................................................................. 193
Resetting USER menu settings to the standard settings .............. 196

**Setting the Status Display on the Viewfinder Screen and the LCD Monitor** ................................................................. 197
Selecting the display items .............................................................. 197
Change confirmation/adjustment progress messages .................... 198
Setting the marker display .............................................................. 199
Setting the viewfinder .................................................................... 200
Recording shot data superimposed on the color bars .................... 200
Setting the shot ID .......................................................................... 201
Displaying the status confirmation screens ................................... 202

**Adjustments and Settings from Menus** ............................................. 203
Setting gain values for the GAIN selector positions .................... 203
Selecting the output signals ............................................................ 204
Assigning functions to ASSIGN switches .................................... 204
Setting power saving functions ..................................................... 207
Setting up a wireless LAN ............................................................. 208
Setting the color temperature manually .................................... 210

---

Table of Contents 5
Chapter 7: Saving and Loading User Setting Data

Handling the “Memory Stick”.............................................................. 214

Saving and Recalling User Files ..................................................... 215
  Saving user menu data to the “Memory Stick” ............................. 215
  Loading saved data from a “Memory Stick” .............................. 217
  Returning the user file settings to the standard settings .......... 218

Saving and Loading Scene Files ..................................................... 218
  Saving a scene file .................................................................. 218
  Loading scene files .............................................................. 220
  Returning the scene file settings to the standard settings .... 221

Jumping to a File-Related Menu Page When Inserting a
  “Memory Stick” ......................................................................... 221

Chapter 8: File Operations

Overview .......................................................................................... 223
  Directory structure ................................................................. 223
  File operation restrictions ..................................................... 224

File Operations in File Access Mode (for Windows) ................... 229
  Making FAM connections ..................................................... 229
  Operating on files ............................................................... 230
  Exiting file operations .......................................................... 230

File Operations in File Access Mode (for Macintosh) .................. 231
  Making FAM connections ..................................................... 231
  Operating on files ............................................................... 232
  Exiting file operations .......................................................... 232

FTP File Operations ........................................................................ 233
  Making FTP connections ..................................................... 233
  Command list ........................................................................ 234

Recording Continuous Timecode with FAM and
  FTP Connections ..................................................................... 239
Chapter 9 : Maintenance

Testing the Camcorder before Shooting ................................................ 240
  Preparations for testing ................................................................. 240
  Testing the camera ........................................................................ 240
  Testing the VDR ................................................................. 242

Maintenance ............................................................................................. 244
  Cleaning the viewfinder ................................................................. 244
  Note about the battery terminal ..................................................... 245

Operation Warnings ................................................................................ 246

Appendix

Important Notes on Operation ............................................................... 254

Specifications ............................................................................................ 256

About a “Memory Stick” .......................................................................... 267

Index.......................................................................................................... 268
After purchasing this unit, before operating, it is necessary to set the region of use. (Unless this setting is made, the unit will not operate.)

For details of these settings, see “Setting the Area of Use” on page 38.

**Note**

Before attaching/removing optional components or accessories to/from the camcorder, be sure to turn the power of the camcorder off.
Chapter 1  Overview

Features

2/3-inch full HD (1920 × 1080) CMOS image sensors

Incorporates three 2/3-inch full HD (1920 × 1080) “Exmor” CMOS image sensors, each with effective pixel count of 2.07 megapixels, that feature F12 (59.94i)/F13 (50i) sensitivity and 59 dB S/N ratio for shooting high-definition images.

Mechanisms for high reliability

A new duct cooling system prevents overheating inside the unit and on its surfaces, for greater reliability in high-temperature environments. Reliability is also enhanced by the drip-proof design.

Recording can continue even when the unit is subjected to jarring shocks, because data is stored in shockproof memory before being recorded to the media. Reliable recording is ensured by a recording verification function, similar to the confidence playback function of tape recorders, qualifying the unit for use in demanding broadcast applications.

Multi-format support

The unit supports HD recording at 1080/59.94i and 1080/50i system frequencies. It also supports recording and playback of SD signals (both NTSC and PAL), allowing a stepwise transition from SD to HD systems.

A format conversion function enables up- and down-conversion between SD and HD. Squeeze, edge cropping, and letterbox are selectable as the aspect pattern in up- and down-conversion between SD and HD.

Note

It is not possible to combine material recorded at different system frequencies on a single disc (see page 53).

Recording of more than 90 minutes of high-quality video and audio data

- Signals captured by the full-HD (1920 × 1080) image sensors are recorded in MPEG HD422 format for consistently high image quality.
- The unit supports recording of four audio channels sampled at 24 bits for high quality.
- Dual-layer Professional discs can record about 95 minutes of high-quality video and audio data.

The generous recording times and the high-quality of the recorded video and audio allow this unit to meet the most stringent requirements of production teams in a wide range of genres, from news gathering through digital cinema and program production.

1) The MPEG-2 422P@HL codec performs 4:2:2 sampling and records at a video bit rate of 50 Mbps.
2) Image compression uses the MPEG-2 Long GOP system.
3) The PDW-HD1500 supports recording of up to eight channels in MPEG HD422 format.

Format compatibility with earlier models

The unit is capable of recording in the MPEG-2 MP@HL 35/25 Mbps formats used by earlier XDCAM HD devices. These formats offer longer recording times than the MPEG-2 422P@HL 50 Mbps format.

It is also capable of recording and playback in the MPEG IMX 50/40/30 Mbps and DVCAM 25 Mbps formats.

Rich selection of interfaces

- HDSDI and SDSDI output connectors: Allow free combination of HDSDI and SDSDI signals. Timecode and other text data can be superimposed on signals from one of the two interfaces.
- Composite signal output connector
- Selectable video input connectors: The unit is designed to support recording in every type of environment, including reporting by pool coverage teams. The optional CBK-HD01 HD/SD SDI Input Board or CBK-SC02 Analog Composite Input Board can be installed to
Enable selection of HD SDI/SD SDI or composite signals. SD signals can be upconverted and recorded as HD signals.

• Gen-lock input connector: Enables synchronized operation of multiple units, with synchronization possible to either VBS or HD-Y signals.

• Audio input connectors: Supports AES/EBU signal input, in addition to microphone input, +48 V microphone input, and line input.

• Timecode input and output connectors

• Network connector and i.LINK connector: Enable transfer of MXF-format files.

• USB connector: Enables use of a Windows USB keyboard or mouse. You can also connect a USB flash drive to record proxy data or load planning metadata, or connect the optional CBK-WA01 Wi-Fi adapter to connect to a wireless LAN network.

Features for improved performance under various shooting conditions

Picture Cache function
The unit can utilize its internal memory to continuously record the current video input, allowing recording to commence a certain time (2 to 30 seconds) in advance of the time when the recording button is pressed, and allowing discs to be exchanged seamlessly without interrupting the recording.

Color temperature filters
Color temperature filters are composed of electronic circuits, allowing smooth and instantaneous switching – an important advantage in ENG (Electronic News Gathering) – and linked operation with ND filters. Dedicated switches are provided to enable rapid switching between color temperature filters, and absolute color temperature settings can be recalled instantly without being effected by white balance settings.

Noise suppression circuits
New noise suppression circuits offer improved performance under difficult evening or nighttime shooting conditions.

Slow shutter function
A maximum of 16 frames can be accumulated using the slow shutter function. In low light levels this allows clear and noiseless video to be shot, and provides a fantasy video effect with ghost images.

Time lapse function (interval recording)
Using this function slow-moving subjects can be shot with the movement compressed in time. This is convenient for many applications, such as monitoring plant growth, or the progress of a construction site.

Freeze Mix function
This allows a still image from previously captured video to be aligned with the current video output from the camera. Thus you can adjust the camera position to get exactly the same framing for new shots. For example, this function makes it easy to frame summer and winter shots of a landscape scene in exactly the same way.

Digital extender function
This magnifies the center section of the video. It utilizes electronic processing, which prevents the decrease in sensitivity (F-drop) that occurs when the lens extender function is used.

Focus magnification function
This magnifies the center section of the viewfinder by a factor of about two. It enables highly precise focus adjustments in HD shooting.

Assignable switches
Frequently used function can be assigned to switches for quick and convenient operation.

Hyper gamma
This enables a wide dynamic range without using the Knee function, by smoothly compressing the high-luminance range.

Supports digital wireless microphone system
The digital wireless microphone system offers high-quality, superior resistance to noise, and simultaneous multi-channel operation. Installation of the DWR-S01D Digital Wireless Receiver 1) enables simultaneous reception of two channels.

1) These products are not available in countries where they are prohibited by radio frequency regulations.

3.5-inch color LCD monitor
The 3.5-inch color LCD monitor displays easy-to-read audio meters, menus, disc and battery capacity indications, and thumbnails of clips stored on disc.
Inherits unique features of XDCAM series

The unit inherits the workflow features of the XDCAM series, including thumbnail display and metadata management, and improves them by introducing an improved man-machine interface. Metadata includes new user-settable clip flags (OK/NG/KEEP) in addition to the existing Rec Start essence marks. The new metadata types enable more efficient workflows when clips recorded on this unit are edited on nonlinear editing systems.

Plays clips shot with existing equipment

Clips recorded at system frequencies of 1080/29.97p, 1080/25p, 720/59.94p or 720/50p on PDW-700 or other existing XDCAM devices can be transferred to the unit (for example, by inserting a disc containing the clips) and played back, even though the unit does not shoot clips at these frequencies.

Locations and Functions of Parts and Controls

Power supply

1 LIGHT switch

Determines how a video light connected to the LIGHT connector (see page 13) is turned on and off.

AUTO: When the POWER switch of the video light is in the on position, the video light is turned on automatically while the camcorder is recording.

MANUAL: You can turn the video light on or off manually, using its own switch.

Notes

- When this switch is set to AUTO, at the beginning of the recording, the picture is recorded even though the lighting may fluctuate until the video light comes on. If the beginning of the recording is important, you should set this switch to MANUAL.
- To ensure proper operation of the video light, Sony recommends the use of the BP-GL95/L80S Battery Pack with the camcorder.

2 POWER switch

Turns the main power supply on and off.
3 DC IN (DC power input) connector
(XLR type, 4-pin, male)
To operate the camcorder from an AC power supply, connect an optional DC power cord to this terminal and then connect the cord to the DC output terminal of the BC-L70, BC-L160, or another battery charger.

4 DC OUT 12V (DC power output) connector (4-pin, female)
Supplies power for a WRR-860A/861/862 UHF Synthesized Diversity Tuner (not supplied) (maximum 0.5 A).
Do not connect any equipment other than the UHF synthesized diversity tuner.

5 Battery attachment shoe
Attach a BP-GL95/GL65/L60S/L80S Battery Pack. Alternatively, you can attach an AC-DN2B/DN10 AC Adaptor to operate the camcorder on AC power supply.

For details about how to attach the battery or AC adaptor, see “Preparing a Power Supply” on page 33. For information about attaching a synthesized tuner, see “Attaching a UHF portable tuner (for a UHF wireless microphone system)” on page 44.

Note
For your safety, and to ensure proper operation of the camcorder, Sony recommends the use of the following battery packs: BP-GL95, BP-GL65, BP-L60S, and BP-L80S.

Accessory attachments

1 Shoulder strap fitting
Attach the supplied shoulder strap (see page 48).

2 Accessory fitting shoe
Attach an optional accessory such as a video light (see page 48).

3 Viewfinder front-to-back positioning lever
To adjust the viewfinder position in the front-to-back direction, loosen this lever and the LOCK knob. After adjustment, retighten this lever and the LOCK knob.

4 Viewfinder left-to-right positioning ring
Loosen this ring to adjust the left-to-right position of the viewfinder (see page 35).

5 Viewfinder fitting shoe
Attach an optional viewfinder.

6 VF (viewfinder) connector (20-pin)
Connect an optional viewfinder. Consult a Sony representative for information about available viewfinders.

7 Lens mount securing rubber
After locking the lens in position using the lens locking lever, fit this rubber over the lower of the two projections. This fixes the lens mount, preventing it from coming loose.
8 Viewfinder front-to-back positioning knob (LOCK knob)
Loosen this knob to adjust the front-to-back position of the viewfinder (see page 35).

9 Fitting for microphone holder
Fit an optional CAC-12 Microphone Holder (see page 43).

10 Shoulder pad
Raise the shoulder pad fixing lever to adjust the position in the front-to-rear direction. Adjust the position for maximum convenience when operating the unit on your shoulder.
For details of the adjustment, see “Adjusting the Shoulder Pad Position” on page 49.

11 LIGHT (video light) connector (2-pin, female)
A video light with a maximum power consumption of 50 W, such as the Anton Bauer Ultralight 2 or equivalent can be connected (see page 48).

12 Lens cable clamp
Clamp a lens cable.

13 MIC IN (microphone input) (+48 V) connector (XLR type, 5-pin, female)
Connect a stereo microphone to this connector. The power (+48 V) is supplied via this connector.

14 LENS connector (12-pin)
Connect a lens cable to this connector.

Note
When connecting the lens cable to this connector, power off this unit first.

15 Tripod mount
When using the unit on a tripod, attach the tripod adaptor (optional).

16 Lens mount (special bayonet mount)
Attach the lens.
Consult a Sony representative for information about available lenses.

17 Lens locking lever
After inserting the lens in the lens mount, rotate the lens mount ring with this lever to lock the lens in position.

After locking the lens, be sure to use the lens mount securing rubber to prevent the lens from becoming detached.

18 Lens mount cap
Remove by pushing up the lens locking lever. When no lens is mounted, keep this cap fitted for protection from dust.

Operating and connectors section

Front

1 REC START (recording start) button
Press to start recording. Press it again to stop recording. The effect is the same as that of the REC button on the lens.

2 SHUTTER selector
Set to ON to use the electronic shutter. Flick to SELECT to switch the shutter speed or shutter mode setting within the range previously set with the menu. When this switch is operated, the new setting appears on the setting change/adjustment progress message display area for about three seconds.
For details about the shutter speed and shutter mode settings, see “Setting the Electronic Shutter” on page 59.

3 FILTER selector
Switches between optical filters built into this unit.
When this selector is used with the menu item for filter selection display set to ON (see page 198), the new setting appears on the viewfinder screen for about three seconds. It is possible to switch between four ND filters.

<table>
<thead>
<tr>
<th>FILTER selector setting</th>
<th>ND filter</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>CLEAR</td>
</tr>
<tr>
<td>2</td>
<td>(1/4) ND (attenuates light to approximately (1/4))</td>
</tr>
<tr>
<td>3</td>
<td>(1/16) ND (attenuates light to approximately (1/16))</td>
</tr>
<tr>
<td>4</td>
<td>(1/64) ND (attenuates light to approximately (1/64))</td>
</tr>
</tbody>
</table>

You can change a MAINTENANCE menu setting so that different white balance settings can be stored for different FILTER selector positions. This allows you to automatically obtain optimum white balance for the current shooting conditions in linkage with the filter selection.

For details, see “Adjusting the white balance” on page 55.

**MENU knob**

Changes the page selection or a setting within the menu.

For details about how to use the MENU knob, see “Menu Operations” on page 189.

**EARPHONE jack (monaural, minijack)**

You can monitor the E-E \(^1\) sound during recording and playback sound during playback. When an alarm is indicated, you can hear the alarm sound through the earphone. You can use this with the EARPHONE jack on the rear of the unit at the same time. Plugging an earphone into the jack automatically cuts off the built-in speaker.

\(^1\) E-E: Abbreviation of “Electric-to-Electric”. In E-E mode, video and audio signals input to the camcorder are output after passing through internal electric circuits only. This can be used to check input signals.

**AUTO W/B BAL (automatic white/black balance adjustment) switch**

Activates the automatic white/black balance adjustment functions.

**WHT:** Adjusts the white balance automatically. If the WHITE BAL switch (see page 16) is set to A or B, the white balance setting is stored in the corresponding memory. If the WHITE BAL switch is set to PRST, the automatic white balance adjustment function does not operate.

**BLK:** Adjusts the black set and black balance automatically.

**MIC (microphone) LEVEL control**

Adjusts the input level of audio channels 1, 2, 3 and 4.

For details, see “Adjusting the Audio Level” on page 64.

**ASSIGN (assignable) 1/2 switches**

You can assign the desired functions to these switches on the ASSIGNABLE SW page of the OPERATION menu.

Nothing is assigned to these switches when the camcorder is shipped from the factory (equivalent to a selection of OFF in the menu).
For details, see “Assigning functions to ASSIGN switches” on page 204.

2 COLOR TEMP. (color temperature) button

Press to light the button and change the color temperature for shooting. You can use this as an ASSIGN (assignable) switch (see page 204).

3 ALARM (alarm tone volume adjustment) knob

Controls the volume of the warning tone that is output via the built-in speaker or optional earphones. When the knob is turned to the minimum position, no sound can be heard. However, if the MIN ALARM VOL item on the AUDIO-1 page of the MAINTENANCE menu is set to SET, the alarm tone is audible even when this volume control is at the minimum position.

4 MONITOR (monitor volume adjustment) knob

Controls the volume of the sound other than the warning tone that is output via the built-in speaker or optional earphones. When the knob is turned to the minimum position, no sound can be heard.

5 MONITOR (audio monitor selection) switches

By means of combinations of the two switches, you can select audio that you want to hear through the built-in speaker or optional earphones.

Position of down-side switch: CH-1/2

<table>
<thead>
<tr>
<th>Position of up-side switch</th>
<th>Audio output</th>
</tr>
</thead>
<tbody>
<tr>
<td>CH-1/CH-3</td>
<td>Channel 1 audio</td>

</tr>
</tbody>
</table>

Position of down-side switch: CH-3/4

<table>
<thead>
<tr>
<th>Position of up-side switch</th>
<th>Audio output</th>
</tr>
</thead>
<tbody>
<tr>
<td>CH-1/CH-3</td>
<td>Channel 3 audio</td>
</tr>
</tbody>
</table>

a) By connecting stereo headphones to the EARPHONE jack on the rear of the unit, you can hear the audio in stereo. (On the AUDIO-1 page of the MAINTENANCE menu, HEADPHONE OUT must be set to STEREO.)

6 VDR SAVE/STBY (VDR save/standby) switch

Switches the status of the power supply to the video disc drive (referred to as “VDR”) while recording is stopped (STOP) or paused (REC PAUSE).

SAVE: The disc stops rotating and some functions are disabled. Power consumption is lower than when the camcorder is in STBY mode. Battery life is extended.

STBY: Recording to the disc starts immediately when the REC START button is pressed.

An internal operating sound may be recorded at the start of recording when the VDR SAVE/STBY switch is set to SAVE.

7 GAIN selector

Switches the gain of the video amplifier to match the lighting conditions during shooting. The gains corresponding to the L, M, and H settings can be selected in the menu. (The factory settings are L=0 dB, M=6 dB, and H=12 dB.)

When this switch is adjusted, the new setting appears on the setting change/adjustment progress message display area of the viewfinder screen for about three seconds.

For details, see “Setting gain values for the GAIN selector positions” on page 203.

8 OUTPUT/DCC (output signal/dynamic contrast control) switch

Switches the video signal, which is output to the VDR, viewfinder, and video monitor from the camera section, between the following two.

BARS: Outputs the color bar signal.

CAM: Outputs the video signal from the camera.

When this is selected, you can switch DCC 1) on and off.
1) **DCC (Dynamic Contrast Control):** Against a very bright background with the iris opening adjusted to the subject, objects in the background will be lost in the glare. The DCC function will suppress the high intensity and restore much of the lost detail and is particularly effective in the following cases.
   - Shooting people in the shade on a sunny day
   - Shooting a subject indoors, against a background through a window
   - Any high contrast scene

9 **WHITE BAL (white balance memory) switch**
Controls adjustment of the white balance.
   - **PRST:** Adjusts the color temperature to the preset value (the factory default setting: 3200K).
     Use this setting when you have no time to adjust the white balance.
   - **A or B:** Recall the white balance adjustment settings already stored in A or B. Flick the AUTO W/B BAL switch (see page 14) on the WHT side, to automatically adjust the white balance, and save the adjustment settings in memory A or memory B.
     You can use the AUTO W/B BAL switch even when ATW ¹ is in use.
   - **B (ATW):** When this switch is set to B and WHITE SWITCH <B> is set to ATW on the WHITE SETTING page of the OPERATION menu, ATW is activated.
     When this switch is adjusted, the new setting appears on the setting change/adjustment progress message display area of the viewfinder screen for about three seconds.

1) **ATW (Auto Tracing White Balance):** The white balance of the picture being shot is adjusted automatically for varying lighting conditions.

10 **STATUS ON/SEL/OFF (menu display on/page selection/display off) switch**
To enable this switch, set the MENU ON/OFF switch to ON.
Closing the cover automatically sets this switch to OFF.
   - **ON/SEL:** Each time this switch is pushed upward, a window to confirm the menu settings and status of the camcorder appears on the viewfinder screen. The window consists of four pages, which are switched each time the switch is pushed upward. Each page is displayed for about 10 seconds.
   - **OFF:** To clear the page immediately after display, push this switch down to the OFF position.

You can select the pages to be displayed on the menu.
For details, see “Displaying the status confirmation screens” on page 202.

11 **MENU ON/OFF switch**
To use this switch, open the cover.
This switch is used to display the menu on the viewfinder screen or the test signal screen.
Closing the cover automatically sets this switch to OFF.
   - **ON:** Displays the menu on the viewfinder screen or the test signal screen.
   - **OFF:** Removes the menu from the viewfinder screen or the test signal screen.

12 **CANCEL/PRST (preset)/ESCAPE switch**
To enable this switch, set the MENU ON/OFF switch to ON.
Closing the cover automatically sets the MENU ON/OFF switch to OFF.
   - **CANCEL/PRST:** Flicking this switch up to this position displays the message to confirm whether the previous settings are cancelled or settings are reset to their initial values, depending on the menu operating condition. Flicking this switch up to this position again cancels the previous settings or resets the settings to their initial values.
   - **ESCAPE:** Use this switch when the menu page, which has a hierarchical structure, is opened. Each time the switch is flicked to this position, the page returns to one stage higher in the hierarchy.

13 **“Memory Stick” compartment**
Open the cover of the menu operating section, and insert a “Memory Stick”, with the notch facing downward, in the direction shown by the arrow, so that it clicks into place.
To remove a “Memory Stick”, first press it in to release the lock, then withdraw. The “Memory Stick” access indicator lights in green when a “Memory Stick” is loaded, and lights in red when the “Memory Stick” is being accessed for reading or writing. For details about “Memory Stick”, see “Handling the “Memory Stick”” on page 214.

14 Cover

Right side (near the rear)

For details about alarms, see “Operation Warnings” on page 246.

2 LCD monitor
Displays camera video, VDR-related warnings, remaining battery capacity, remaining disc capacity, audio levels, time data, and so on. For details, see “Status Display on the LCD monitor and monochrome LCD” on page 19.

3 WARNING indicator
Lights up or flashes when an abnormality occurs in the VDR section. For details about the meaning of the states of the WARNING indicator, see “Operation Warnings” on page 246.

4 ACCESS indicator
This lights when data is written to or read from the disc.

5 Protection cover of the audio control section
Open to access the audio control section (see page 22).

6 Protection cover of the GUI screen operations section
Open to access the GUI screen operations section (see page 22).

7 Monochrome LCD
This shows the remaining battery capacity, remaining disc capacity, time data, and so on. For details, see “Status Display on the LCD monitor and monochrome LCD” on page 19.

8 EJECT button and indicator
Press this button to insert a disc or eject the disc. The indicator flashes while the disc is being ejected.

9 F REV (fast reverse) button and indicator
This plays back at high speed in the reverse direction. The indicator lights during high-speed playback in the reverse direction.

10 PLAY/PAUSE button and indicator
Press this button to view play back video images using the viewfinder screen or the LCD monitor. The indicator lights during playback.
Press this button again during playback to pause, outputting a still image. At this time the indicator flashes.

This unit is equipped with an image search function at approximately four times normal playback speed, for easy checking of recorded material. To use the image search function at approximately four times normal playback speed, press the F REV button or F FWD button during playback.

At this time the PLAY indicator and F REV or F FWD indicator light.

11 F FWD (fast forward) button and indicator

This plays back at high speed in the forward direction. The indicator lights during high-speed playback in the forward direction.

12 PREV button

This jumps to the first frame of the current clip. During the jump, the F REV indicator flashes.

If you press this together with the F REV button, the jump is to the first frame of the first recorded clip on the disc.

13 STOP button

Press this button to stop disc playback.

14 NEXT button

This jumps to the first frame of the next clip. During the jump, the F FWD indicator flashes.

If you press this together with the F FWD button, the jump is to the last frame of the last recorded clip on the disc.

15 DISP SEL (display selection) / EXPAND (expand function) button

With each press of this button, the display in the LCD monitor changes as follows.

<table>
<thead>
<tr>
<th>Display indication</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Video with superimposed information (CHAR)</td>
<td>The LCD monitor displays the same text information as the viewfinder.</td>
</tr>
<tr>
<td>Video without superimposed information (MONI)</td>
<td>The video only appears.</td>
</tr>
<tr>
<td>Status display (STATUS)</td>
<td>Counter indications, warnings, audio levels, and similar information appear. No video image appears.</td>
</tr>
</tbody>
</table>

If you press this button when the thumbnail screen is displayed, the duration of the selected clip is divided into 12, and the first frame of each of the divisions is shown in a further thumbnail display (expand function). Each time you press this button, the division is repeated (to a maximum of three times, with 1,728 divisions). Hold down the SHIFT button and press this button to step back through the division process.

*For details of the expand function, see page 111.*

16 HOLD (display hold)/CHAPTER (chapter function) button

Pressing this button instantly freezes the time data displayed in the counter display section. (The timecode generator continues running.) Pressing this button again releases the hold.

You can use this button, for example, to determine the exact time of a particular shot.

*For details of the counter display, see page 20.*

If you press this button when the clip thumbnail screen is displayed, those frames on which shot marks are recorded appear in a list (chapter function). Press the button once more to return to the normal thumbnail display.

By displaying thumbnails with shot marks attached in place of index frames, you can check the contents of clips more easily and more quickly. This is also useful for cueing up long clips.

*For details of the chapter function, see page 112*

17 RESET/RETURN button

Resets the value shown in the time counter display. According to the settings of the PRESET/REGEN/CLOCK switch (see page 22) and the F-RUN/SET/R-RUN switch (see page 22), this button resets the display as follows.
Locations and Functions of Parts and Controls

Chapter 1  Overview

a) Of the timecode bits for every frame recorded on the disc, those bits which can be used to record useful information for the user such as scene number, shooting place, etc. For details, see “Setting the Time Data” on page 67.

This button returns to the previous screen when pressed during thumbnail display. For details, see “GUI screen operations” on page 109.

18 DISPLAY switch
This cycles the data displayed in the counter display through the sequence COUNTER, TC, and U-BIT.

COUNTER: Display the elapsed recording/playback time (hours, minutes, seconds, frames).

TC: Display timecode.

U-BIT: Display user bit data. For details, see “Status Display on the LCD monitor and monochrome LCD” on page 19.

19 BRIGHT (brightness) button
Switches the brightness of the LCD monitor backlight, and turns the backlight of the monochrome LCD on and off. Each press of the button selects the next setting in the order shown in the following table.

### Settings of switches

<table>
<thead>
<tr>
<th>Setting</th>
<th>LCD monitor backlight</th>

</tbody>
</table>

### Status Display on the LCD monitor and monochrome LCD
The following display appears on the LCD monitor display which is set to STATUS with the DISP SEL/EXPAND button, and on the monochrome LCD.

1 Resolution
Indicates the resolution of HD output video. The unit has a fixed 1080 (1920 horizontal x 1080 vertical) resolution.
2 Video format
Indicates the format of video being currently played back or recorded.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Format</th>
<th>Bit rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>HD422 50</td>
<td>MPEG HD422</td>
<td>50 Mbps</td>
</tr>
<tr>
<td>HD420 HQ/SP/LP</td>
<td>MPEG HD420</td>
<td>35/25/18 Mbps</td>
</tr>
<tr>
<td>IMX 50/40/30</td>
<td>MPEG IMX</td>
<td>50/40/30 Mbps</td>
</tr>
<tr>
<td>DVCAM</td>
<td>DVCAM</td>
<td>25 Mbps</td>
</tr>
</tbody>
</table>

a) LP is playback only.

3 System frequency
Indicates the system frequency of video being currently played back or recorded.

If NTSC AREA is selected 1)

<table>
<thead>
<tr>
<th>Indication</th>
<th>Field or frame rate</th>
<th>Scan mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>59.9i</td>
<td>59.94 fields per second</td>
<td>Interlace</td>
</tr>
</tbody>
</table>

If PAL AREA is selected 1)

<table>
<thead>
<tr>
<th>Indication</th>
<th>Field or frame rate</th>
<th>Scan mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>50i</td>
<td>50 fields per second</td>
<td>Interlace</td>
</tr>
</tbody>
</table>

1) Selected by COUNTRY setting on the FORMAT page of the OPERATION menu (see page 154).

Note
There may be no indication displayed when this unit cannot identify the system frequency, for example, when playing back a disc recorded with other equipment.

4 Audio format
Indicates the format of audio being currently played back or recorded.

<table>
<thead>
<tr>
<th>Indication</th>
<th>Quantization bit rate/sampling frequency</th>
</tr>
</thead>
<tbody>
<tr>
<td>24bit</td>
<td>24 bits/48 kHz</td>
</tr>
<tr>
<td>16bit</td>
<td>16 bits/48 kHz</td>
</tr>
</tbody>
</table>

5 Audio level indicators
Indicates the audio recording or playback levels of channels 1 to 4.

6 Status display
PB: Appears during playback.
NDF: Appears when non-drop-frame timecode is selected.

EXT-LK: Appears when the internal timecode generator is locked to an external signal input to the TC IN (timecode input) connector.

HOLD: Appears when the internal timecode generator is stopped.

7 Time counter display
Switches displays of time counter, timecode, and user bits, depending on the position of the DISPLAY switch.

When the HOLD/CHAPTER button is pressed to hold the timecode value, the timecode is displayed in the format shown below. When the HOLD/CHAPTER button is pressed again to release the hold, the timecode is displayed in the normal format.

Lights when the HOLD/CHAPTER button is pressed.

8 Warning indicator area
Displays warnings when trouble with recording or moisture condensation occurs.

For details, see “Operation Warnings” on page 246.

Also, when it is possible to set clip names by using planning metadata (see page 93), displays as clip information the title contained in the planning metadata that has been loaded into this unit. (The display format follows the setting of Planning Clip Name in Clip Info. Area in the Disc Menu.)

The following characters can be displayed.
- Digits: 0 to 9
- Alphabetic characters: a to z, A to Z
- The following symbols: !, , #, $, %, &, ', (, ), *, +, , (comma), -, . (period), /, : (colon), ; (semicolon), <, =, >, ?, @, [ ], ^, _{, |, } , ~
- Space
### Remaining disc capacity indicator

<table>
<thead>
<tr>
<th>Indication</th>
<th>Remaining recording time</th>
</tr>
</thead>
<tbody>
<tr>
<td>DISC E [◼◼◼◼◼◼◼◼◼◼◼◼] B</td>
<td>More than 30 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼◼◼◼◼◼◼] B</td>
<td>25 to 30 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼◼◼◼◼◼] B</td>
<td>20 to 25 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼◼◼◼◼] B</td>
<td>15 to 20 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼◼◼◼] B</td>
<td>10 to 15 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼◼◼] B</td>
<td>5 to 10 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼◼] B (flashing)</td>
<td>2 to 5 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼◼] B (flashing)</td>
<td>0 to 2 minutes</td>
</tr>
<tr>
<td>DISC E [◼◼◼◼] B (flashing)</td>
<td>0 minutes</td>
</tr>
</tbody>
</table>

### Remaining battery capacity indicator

<table>
<thead>
<tr>
<th>Indication</th>
<th>Battery voltage BP-L90A/L60S/L80S</th>
<th>Other batteries a)</th>
</tr>
</thead>
<tbody>
<tr>
<td>BATT E [◼◼◼◼◼◼◼◼◼◼◼◼] F</td>
<td>15.5 V or more</td>
<td>17.0 V or more</td>
</tr>
<tr>
<td>BATT E [◼◼◼◼◼◼◼◼◼◼◼◼] F</td>
<td>15.1 to 15.5 V</td>
<td>16.0 to 17.0 V</td>

</tbody>
</table>
GUI screen operations section and audio control section

1 THUMBNAIL indicator
This lights when thumbnails are displayed.

2 THUMBNAIL/ESSENCE MARK button
Press this button to carry out a thumbnail search or create a clip list (see page 111).
When pressed, the whole-screen display changes to a thumbnail display. Press once more to return to the whole-screen display.
For a thumbnail search using essence marks, hold down the SHIFT button and press this button (see page 112).

3 SET/S.SEL (set/scene selection) button and arrow buttons
Use these buttons to make timecode and user bit settings, and for GUI screen operations.
The arrow buttons select items and change values, and the SET/S.SEL button confirms settings.
Pressing this button with thumbnails displayed and the SHIFT button held down adds a sub clip to the current clip list (scene selection).
See page 109 for more information about GUI screen operations.
See page 121 for more information about scene selection.

4 MENU button
Displays a special menu for operations in GUI screens (see page 105).
When the whole-screen is displayed, pressing this button has no effect, and the operation is invalid.

5 F-RUN/SET/R-RUN (free run/set/recording run) switch
Selects the operating mode of the internal timecode generator. The operating mode is set as explained below, depending on the position of the switch.
F-RUN: Timecode keeps advancing, regardless of the operating state of the VDR. Use this setting when synchronizing the timecode with an external timecode.
SET: Sets the timecode or user bits.
R-RUN: Timecode advances only during recording. Use this setting to have a consecutive timecode on the disc.
For details, see “Setting the timecode” on page 67 and “Setting the user bits” on page 67.

6 LEVEL CH-1/CH-2 (audio channel 1/2 recording level) knobs
Adjusts the audio levels to be recorded on channels 1 and 2 when the AUDIO SELECT CH-1/CH-2 switches are set to MANUAL.

7 SUB CLIP indicator
This lights when using a clip list for playback.

8 SUB CLIP/DISC MENU button
Press this to play back according to a clip list. You can play back a particular clip or sequential clips, or carry out a search of the selected clip list.
To display the Disc Menu which allows you to carry out operations such as saving, recalling, or deleting a clip list, hold down the SHIFT button and press this button.

9 SHIFT button
Use this in combination with other buttons.

10 PRESET/REGEN (regeneration)/CLOCK switch
Selects whether to set a new timecode or to utilize the existing timecode.
PRESET: Records a new timecode.
REGEN: Records timecode continuous with the existing timecode recorded on the disc.
Regardless of the setting of the F-RUN/SET/R-RUN switch, the camcorder operates in R-RUN mode.
CLOCK: Records timecode synchronized to the internal clock. Regardless of the setting of the F-RUN/SET/R-RUN switch, the camcorder operates in F-RUN mode.
11 AUDIO SELECT CH-1/CH-2 (audio channel 1/2 adjustment method selection) switches
Select the audio level adjustment method for each of audio channels 1 and 2.
AUTO: Automatic adjustment
MANUAL: Manual adjustment

12 AUDIO IN CH-1/CH-2/CH-3/CH-4 (audio channel 1/2/3/4 input selection) switches

AUDIO IN CH-1/CH-2 switches
Select the audio input signals to be recorded on audio channels 1 and 2.
FRONT: Audio input signals from the microphone connected to the MIC IN connector
REAR: Audio input signals from an audio device connected to the AUDIO IN CH1/CH2 connectors
WIRELESS: Audio input signals from the UHF portable tuner (not supplied) if it is installed

AUDIO IN CH-3/CH-4 switches
Select the audio input signals to be recorded on audio channels 3 and 4.
F (FRONT): Audio input signals from a microphone connected to the MIC IN connector
R (REAR): Audio input signals from an audio device connected to the AUDIO IN CH1/CH2 connectors
W (WIRELESS): Audio input signals from the UHF portable tuner (not supplied) if it is installed

Left side and upper section

1 ASSIGNABLE 3/4 switches
You can assign the desired functions to these switches on the ASSIGNABLE page of the OPERATION menu.
Nothing is assigned to these switches when the camcorder is shipped from the factory (equivalent to a selection of OFF in the menu).
For details, see “Assigning functions to ASSIGN switches” on page 204.

2 Lid of the disc compartment
This opens when the EJECT button on the top panel is pressed. Press the side of the lid to close.

3 SDI IN (OPTION) connector (BNC type)
This is an input connector for the optional CBK-HD01 HD/SD SDI Input Board. When the CBK-HD01 is installed, the unit can record HD-SDI or SD-SDI signals that are input to this connector.

4 GENLOCK IN (genlock signal input) connector (BNC type)
- This connector inputs a reference signal when the camera is to be genlocked or when timecode is to be synchronized with external equipment.
Use the GENLOCK page of the MAINTENANCE menu to adjust the genlock H-phase (phase of horizontal sync signal). Available reference signals vary depending on the current system frequency as shown in the following table.

<table>
<thead>
<tr>
<th>System frequency</th>
<th>Available reference signals</th>
</tr>
</thead>
<tbody>
<tr>
<td>1080/59.94i</td>
<td>1080/59.94i, 525/59.94i</td>
</tr>
<tr>
<td>1080/50i</td>
<td>1080/50i, 625/50i</td>
</tr>
</tbody>
</table>

- This connector also inputs a return video signal. You can display the HD-Y (1080i) signal in the viewfinder screen while holding the RET button down with RETURN VIDEO set to ON on the ASSIGNABLE SW page of the OPERATION menu.
- Input an external video signal. When the optional CBK-SC02 Analog Composite Input Board is installed, the unit can record analog composite video signals that are input to this connector.

5 TC IN (timecode input) connector (BNC type)
To apply an external lock to the timecode of this unit, input the reference timecode. For details of timecode, see “Setting the timecode” on page 67.

6 TEST OUT connector (BNC type)
This connector outputs the video signal for a video monitor. The output signal can be selected from composite video, HD-Y, R/G/B, and a composite video signal like that displayed in the LCD status monitor. To switch output signals, use the TEST OUT SELECT item on the OUTPUT 1 page of the OPERATION menu. If the output signal is set to one of R, G, or B, then this setting changes to HD-Y when the camcorder is powered off and on again. Depending on menu settings, menus, timecode, and shot data can be superimposed on the image on the monitor. This connector can also be used to synchronize the timecode of an external VTR with the timecode of the camcorder.

7 TC OUT (timecode output) connector (BNC type)
To lock the timecode of an external VTR to the timecode of this unit, connect this connector to the external VTR’s timecode input connector.
Chapter 1  Overview

Before using this connector, you must set ETHERNET/USB on the POWER SAVE page of the OPERATION menu to “ENABL” (see page 207).

4  **(network) connector (RJ-45 type)**

This is a 10BASE-T/100BASE-TX connector for network connection. Before using this connector, you must set ETHERNET/USB on the POWER SAVE page of the OPERATION menu to “ENABL” (see page 207).

**CAUTION**

For safety, do not connect the connector for peripheral device wiring that might have excessive voltage to this port. Follow the instructions for this port. When you connect the network cable of the unit to peripheral device, use a Category 6 (or higher) cable to prevent malfunction due to radiation noise.

5  **EARPHONE jack (stereo, minijack)**

You can monitor the E-E sound during recording and playback sound during playback. When an alarm is indicated, you can hear the alarm sound through the earphone. You can use this with the EARPHONE jack on the front of the unit at the same time. Plugging an earphone into the jack automatically cuts off the built-in speaker. You can select monaural or stereo on the AUDIO-1 page of the MAINTENANCE menu.

6  **LINE / AES/EBU / MIC selectors**

These select the audio source of the audio input signals input to the AUDIO IN CH1/CH2 connectors.

- **LINE**: Line input audio equipment
- **AES/EBU**: AES/EBU format audio signal
- **MIC**: Microphone input

**Note**

When these switches are in the MIC position, and the +48V/OFF switch is set to +48V, if you inadvertently connect any audio device other than a microphone to the AUDIO IN CH1/CH2 connectors, the device may be damaged.

7  **+48V/OFF switches**

Select either of the following positions for the microphones to be connected.

- **+48V**: For a microphone to use an external power supply
- **OFF**: For a microphone to use an internal power supply

**8 REMOTE connector (8-pin)**

Connect an RM-B170/B750 remote control unit, which makes it possible to control the camcorder remotely.

**Note**

Before connecting/disconnecting the Remote Control Unit to/from the camcorder, be sure to turn off the camcorder POWER switch.

9  **SDI OUT 1 connector (BNC type)**

Outputs an HDSDI or SDSDI signal (with embedded audio). To switch between HDSDI and SDSDI output, use the SDI OUT 1 SELECT item on the OUTPUT 1 page of the OPERATION menu.

10  **SDI OUT 2 connector (BNC type)**

Outputs an HDSDI or SDSDI signal (with embedded audio). To switch between HDSDI and SDSDI output, use the SDI OUT 2 SELECT item on the OUTPUT 1 page of the OPERATION menu.

Setting menus, timecode, or shot data can be superimposed on the camera output video depending on the menu settings, and you can view them on the monitor screen.

11  **AUDIO IN CH1/CH2 (audio channel-1 and channel-2 input) connectors (XLR type, 3-pin, female)**

These are audio input connectors for channels 1 and 2 to which you can connect audio equipment or a microphone. When the LINE / AES/EBU / MIC selector is set to AES/EBU, the CH1 connector is used for channel-1 and -2 inputs, and the CH2 connector, for channel-3 and -4 inputs.

<table>

</tr>
</tbody>
</table>

Before using this connector, you must set ETHERNET/USB on the POWER SAVE page of the OPERATION menu to “ENABL” (see page 207).
**Locations and Functions of Parts and Controls**

**1. Plug**
Connect to the VF connector on the camcorder.

**2. Stopper**
Prevents the viewfinder from coming off the camcorder when it is slid from side to side.

**3. Camera operator tally indicator**
Lights up while camcorder is recording. This indicator can be covered when not in use. This indicator also flashes to indicate warnings, in the same manner as the tally indicator and the REC indicator in the viewfinder.

**4. Eyecup**

**5. Indicators and status display**
For details, see “Status display on the viewfinder screen” on page 27.

**6. Diopter adjustment ring**
Allows for optimal focus adjustment.

**7. Tally indicator**
Lights up while camcorder is recording. Set the TALLY switch to OFF when not in use. The brightness can also be adjusted with the TALLY switch. This indicator also flashes to indicate warnings, in the same manner as the camera operator tally indicator and the REC indicator in the viewfinder.

**8. PEAKING control**
Turning this control clockwise adjusts the picture sharpness, and makes focusing easier. This control has no effect on the output signals of the camcorder.

**9. CONTRAST control**
Adjusts the contrast of the screen. This control has no effect on the output signals of the camcorder.

**10. BRIGHT control**
Adjusts the brightness of the screen. This control has no effect on the output signals of the camcorder.

**11. TALLY switch**
Controls the tally indicator located on the front of the viewfinder. **HIGH**: The tally indicator brightness is set to high.

---

**12. AUDIO OUT connector (XLR type, 5-pin, male)**
Outputs the audio signals recorded on audio channels 1 and 2 or audio channels 3 and 4. The audio signals are selected by the MONITOR switch.

**13. (i.LINK) S400 connector (6-pin, IEEE1394 compliant)**
Use an i.LINK cable (DV cable) to connect the camcorder to a computer for File Access Mode file operations.
For details, see “File Operations in File Access Mode (for Windows)” on page 229.

**Note**
When you connect the camcorder and other equipment, such as a hard disk drive, with an i.LINK interface to a computer with i.LINK connectors, turn off the power of the computer, the other equipment, and the camcorder before connecting them using the i.LINK cable (DV cable). If a bus-powered type 1) hard disk drive or similar equipment is connected while the computer is powered on, electric current flows into the camcorder because of the high voltage caused by the load shift of the computer power, and this may cause a malfunction.

1) Equipment that can be powered through i.LINK cable (DV cable)
OFF: The tally indicator is disabled.
LOW: The tally indicator brightness is set to low.

12 ZEBRA (zebra pattern) switch
Controls the zebra pattern display on the viewfinder screen as follows.
ON: A zebra pattern appears and stays.
OFF: The zebra pattern disappears.
MOMENT: A zebra pattern appears and stays for about five seconds.

13 DISPLAY/ASPECT switch
Turns the marker indication on and off, and switches between 4:3 and 16:9 aspect ratios for viewfinder screen display.
DISPLAY: When the marker indication is enabled with the camcorder, the marker indication on the viewfinder screen turns on and off every time you push the switch up to this position.
ASPECT: Each push of the switch down to this position toggles the mask display on and off.
(Make mask display settings on the MARKER 1 page of the OPERATION menu (see page 151).)

14 Viewfinder cable
15 Microphone holder

Status display on the viewfinder screen

Indicators
The following indicators are arranged above and below the viewfinder screen to show the current state and adjustments of the camcorder.

1 TALLY (green tally) indicator
Lights when the camcorder is the following states.
- Picture Cache mode enabled
- Disc Exchange Cache mode enabled
- Recording with HDSDI REMOTE I/F on the CAM CONFIG 1 page of the MAINTENANCE menu set to G-TLY
Flashes when the camcorder is the following states.
- Set to Auto Interval Rec mode or the consecutive mode of Manual Interval Rec mode (1 flash per second)
- Recording in Auto Interval Rec mode or recording in the consecutive mode of Manual Interval Rec mode (4 flashes per second)
- Set to the single-shot mode of Manual Interval Rec mode, or recording in that mode (2 flashes per second)

2 BATT (battery) indicator
This indicator starts flashing when the battery connected to the camcorder is nearly exhausted, and stays lit when the battery is completely exhausted.
To prevent interruption during operation, replace the battery as soon as this indicator starts flashing.

The battery power level at which the indicator starts flashing can be set on the BATTERY 1 page of the MAINTENANCE menu. For details, see page 167.

3 REC (recording, red tally) indicator
Lights up while camcorder is recording.
This indicator also flashes to indicate warnings, in the same manner as the tally indicator and the camera operator tally indicator.
4 Viewfinder screen

5 VTR SAVE indicator
This indicator lights when the VDR SAVE/STBY switch is set to SAVE, putting the VDR into power save mode.

6 ! (warning) indicator
This indicator lights when any of the following conditions occurs with the corresponding item set to ON on the ‘!’ LED page of the OPERATION menu.
• The gain is set to other than 0 dB.
• The SHUTTER selector is not set to the standard setting (OFF).
• The WHITE BAL switch is set to PRST.
• ATW is enabled.
• The lens extender is used.
• The FILTER selector is set to other than ND:1.
• The reference value of auto iris adjustment is not the standard value.

Layout of the status display on the viewfinder screen
The viewfinder screen displays not only the video picture but also characters and messages indicating the camcorder settings and operating status, a center marker, a safety zone marker, etc. When the menu screen is not displayed and the DISPLAY of the DISPLAY/ASPECT switch is set to on, the items for which an ON setting was made on the VF DISP 1, VF DISP 2, or VF DISP 3 page of the OPERATION menu or with related switches are displayed at the top and bottom of the screen. The messages that give details of the settings and adjustment progress and results can also be made to appear for about three seconds while settings are being changed, during adjustment, and after adjustment.

For details about the display item selection, see “Selecting the display items” on page 197.
For details about setting change and adjustment progress messages, see “Change confirmation/adjustment progress messages” on page 198.
For details about marker display, see “Setting the marker display” on page 199.

All items that can be displayed on the viewfinder screen are shown below.

Top of viewfinder screen

1 Color temperature
Displays a color temperature calculated from the gain of R and B, in the range 0.0 K to 99.9 K (in steps of 0.1 K). The +/- signs may be displayed depending on the OFFSET WHT setting (see page 211).
No display: OFFSET WHT is OFF
+: The value of OFFSET WHT is greater than 3200K.
–: The value of OFFSET WHT is less than 3200K.

2 Video format
Indicates the format of video being currently played back or recorded (see page 52). The video aspect ratio (16:9 or 4:3) can also be displayed when the recording format is set to IMX 50, IMX 40, IMX 30, or DVCAM.

3 Extender
Displays the extender settings of this unit and the lens.
EX: The lens extender is on.
08: The lens shrinker is on.
x*D: This unit’s extender function is on (where * is 2 to 4, depending on the selected magnification).
Ex*D: The lens extender and the digital extender function of this unit are both on (where * is 2 to 4, depending on the selected magnification).

4 Zoom position
Indicates the zoom position of the zoom lens in the range from 0 to 99.
5 Clip information

During shooting, displays information about the clip being recorded or the clip to be recorded next. During playback, displays information about the playback clip.

The information that appears depends on the setting of DISP CLIP NAME on the VF DISP 3 page of the OPERATION menu. You can also set DISP CLIP NO(PB) on the VF DISP 2 page of the OPERATION menu to “ON” to display the clip number and total number of clips during playback.

When DISP CLIP NAME is set to “PLAN”:

During shooting, when Planning Clip Name Display in the Disc Menu is set to “Enable”, this area displays the title specified in the currently loaded planning metadata. (The display format follows the setting of “Planning Clip Name in Clip Info. Area” in the Disc Menu.)

When DISP CLIP NAME is set to “AUTO”:

During shooting, this area displays one of the following, depending on the setting of AUTO NAMING on the FILE NAMING page of the OPERATION menu.

- “C****” or “TITLE”: The clip name (standard name, user-specified name, or title) specified by “Display Title” in the Disc Menu
- “PLAN”: During shooting, when Planning Clip Name Display in the Disc Menu is set to “Enable”, the title specified in the currently loaded planning metadata. (The display format follows the setting of “Planning Clip Name in Clip Info. Area” in the Disc Menu.)

During playback, this area displays the clip name (standard name, user-specified name, or title) specified by “Display Title” in the Disc Menu.

The following characters can be displayed in this area.

- Digits: 0 to 9
- Alphabetic characters: a to z, A to Z
- The following symbols: !, , #, $, &, , ( ), *, +, , (comma), -, . (period), : (colon), ; (semicolon), <, =, >, ?, @, [ ], ^, _, {, |, }, ~
- Space

6 Wireless microphone reception level

When a UHF portable tuner is installed in the camcorder, “W” appears together with four-segment reception level indicators for each of the channels (1 or 2 channels) that can be used by the tuner. The indications are as follows.

Normal use: The number of white segments indicates the strength of the signal level.

Muted: The number of gray segments indicates the strength of the signal level.

Reception level over peak: “P” is displayed instead of the indicators. 1)

Tuner battery is low: The channel number and indicator of the corresponding channel flash. 1)

1) DWR-S01D only

7 Power source voltage/battery remaining capacity

When the unit is powered from a battery pack, indicates the remaining capacity of the power source voltage. When the unit is powered from a battery connected to the DC IN connector or AC adaptor attached to the battery attachment shoe, indicates the power source voltage.

8 External battery

Appears if the power is supplied from an AC adaptor connected to the DC IN connector.

9 Clip Continuous Rec function

Appears when the Clip Continuous Rec function (see page 87) is enabled.

CONT (lit): Continuous recording to extend the previous clip is possible.

CONT (flashing): A new clip will be created and recorded.

10 Cooling fan control mode

This appears when FAN CONTROL on the CAM CONFIG 2 page of the MAINTENANCE menu is set to “R.MIN” or “MIN”.

FAN (lit): The cooling fan is operating at low speed.

FAN (flashing): The cooling fan is operating at low speed, but the temperature inside the unit has risen to a level just below the level at which an alarm occurs.

Note

If you do nothing while the FAN display is flashing, the unit will attempt to lower the internal temperature by operating the fan at high speed. When the FAN display...
begins to flash, you should stop shooting and other operations and wait until the internal temperature drops, and then restart operations.

**11 Memory symbol and remaining memory capacity, or wireless LAN connection status**

When a USB flash drive is connected to the enabled USB connector, a memory symbol appears indicating the mount status of the USB flash drive and its remaining capacity.

**Memory symbol and remaining capacity display**

<table>
<thead>
<tr>
<th>Icon</th>
<th>Remaining capacity display</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lit</td>
<td></td>
<td>Proxy data recording is enabled, and there is at least 5 minute of remaining capacity.</td>
</tr>
<tr>
<td>Flashing</td>
<td></td>
<td>Proxy data recording is enabled, but there is less than 5 minute of remaining capacity. a)</td>
</tr>
<tr>
<td>Out</td>
<td></td>
<td>Proxy data recording is disabled. b)</td>
</tr>
<tr>
<td>INH</td>
<td></td>
<td>The USB flash drive is write protected. c)</td>
</tr>
<tr>
<td>Out</td>
<td></td>
<td>The USB flash drive could not be mounted. d)</td>
</tr>
</tbody>
</table>

a) Use a USB flash drive with enough free capacity remaining.
b) Enable the proxy data recording function.
c) Clear the write protection on the USB flash drive.
d) Format or exchange the USB flash drive.

When Wi-Fi on the POWER SAVE page of the OPERATION menu is set to “ENABL”, the wireless LAN connection status is displayed in this area, as follows.

**Not connected, or connection destination unknown**: An “×” lights.

**Connecting**: Four gray segments flash.

**Connection completed (signal strength 0)**: One gray segment lights.

**Connection completed (signal strength 1 to 4)**: White segments light. The number of white segments (1 to 4) indicates the reception signal level (1 to 4).

---

**Bottom of viewfinder screen**

**1 External device control and single clip playback**

**REC2**: Appears when HDSDI REMOTE I/F in the CAM CONFIG 1 page of the MAINTENANCE menu is set to “CHARA”, and this unit is controlling recording by an external device connected to the SDI OUT 1/2 connectors (HDSDI output). 1)

**SNGL**: Appears when SINGLE CLIP MODE in the CAM CONFIG 1 page of the MAINTENANCE menu is set to “ON”, and the unit is searching or playing a clip (see page 77).

1) SDI OUT 1 SELECT or SDI OUT 2 SELECT on the OUTPUT 1 page of the OPERATION menu must be set to HDSDI.

**2 Setting change and adjustment progress message display area**

For details, see “Change confirmation/adjustment progress messages” on page 198.

**3 External input status and aberration correction function**

**EXT HDSDI/SDSDI/VBS**: When the REC VIDEO SOURCE item on the SOURCE SEL page of the OPERATION menu has been set to EXT, then “EXT” and the signal type (HDSDI, SDSDI, or VBS) flashes when a valid signal is input to this unit.

For details, see “Recording video from external devices” on page 95.

**ALAC**: Appears when ALAC in the CAM CONFIG 3 page of the MAINTENANCE menu is set to “AUTO” (see page 176).
4 Electric color temperature filter/Scene file number
The electric color temperature filter display appears when the CC 5600K function is set to ON.
When DISP SCENE FILE on the VF DISP 3 page of the OPERATION menu is set to “ON”, the number of the currently loaded scene file (“S1” to “S5”) appears instead of the filter display.

5 Filter
Indicates the currently selected filter type (see page 13).
When the function that switches between electrical CC filters has been assigned to an ASSIGN switch (see page 57), and when a remote control unit has been connected, the electrical CC filter position (A, B, C, or D) appears to the right side of the ND filter display (1 to 4).

6 White balance memory
Indicates the currently selected white balance automatic adjustment memory.
A: Displayed when the WHITE BAL switch is set to A.
B: Displayed when the WHITE BAL switch is set to B.
P: Displayed when the WHITE BAL switch is set to PRST or when the preset button on an RM-B170 has been pushed.
T: Displayed when ATW is being used.
3200: Displayed when the COLOR TEMP SW 3200K function is set to ON.
4300: Displayed when the COLOR TEMP SW 4300K function is set to ON.
5600: Displayed when the COLOR TEMP SW 5600K function is set to ON.
6300: Displayed when the COLOR TEMP SW 6300K function is set to ON.

7 Timecode
Indicates the elapsed recording/playback time, timecode, user bits or other information selected by the DISPLAY switch (see page 19).

8 Gain value
Indicates the gain value (in dB) of the video amplifier, as set by the GAIN selector.

9 Shutter speed
Indicates the shutter speed or the shutter mode. However, if the SHUTTER selector (see page 13) is set to OFF, nothing is displayed.
For details of the displayed shutter speed, see “Setting the Electronic Shutter” on page 59.

10 Operation/alarm message display area
For details, see “Operation/alarm messages” on page 249.

11 Audio level
Indicates the level of audio channel 1 and channel 2. The peak indication of the VDR level meter is related as follows to the audio level.

The segment colors change from gray to white at or above the AU REF LEVEL set on the AUDIO-2 page of the MAINTENANCE menu. This setting does not affect the relationship between the number of lit segments and the audio levels. The example in the above figure shows the colors when AU REF LEVEL is set to –20 dB.

12 Remaining disc capacity
Indicates the remaining recording time (in minutes) of the disc.
### Examples of remaining recording time indication

<td>0 minutes</td>
</tr>
</tbody>
</table>

**Note**

During shooting in special modes such as Interval Rec, the indicated remaining disc time may differ from the time which can be actually shot and recorded.

**13 Remaining clips display**

Displays the remaining number of clips that can be recorded. The display flashes once per second when the number of remaining clips is less than 10.

**14 Iris setting/auto iris override**

Indicates the F value (iris setting) of the lens. Auto iris override is shown by an indicator made up of two segments each on the upper and lower sides.

*For details, see “Changing the Reference Value for Automatic Iris Adjustment” on page 62.*
Preparing a Power Supply

For safety, use only the Sony battery packs and AC adaptors listed below.
- BP-GL95/GL65/L60S/L80S Lithium-ion Battery Pack
- AC power using the AC-DN2B/DN10 AC Adaptor

Using a battery pack

When a BP-GL95/GL65/L60S/L80S Battery Pack is used, the camcorder will operate continuously for the time shown below.

<table>
<thead>
<tr>
<th>Model name</th>
<th>Operating time</th>
</tr>
</thead>
<tbody>
<tr>
<td>BP-GL95</td>
<td>Approx. 120 minutes</td>
</tr>
<tr>
<td>BP-GL65</td>
<td>Approx. 75 minutes</td>
</tr>
<tr>
<td>BP-L60S</td>
<td>Approx. 75 minutes</td>
</tr>
<tr>
<td>BP-L80S</td>
<td>Approx. 100 minutes</td>
</tr>
</tbody>
</table>

WARNING

Batteries shall not be exposed to excessive heat such as sunshine, fire or the like.

Note

The battery pack operating time depends on the frequency of use of the battery pack, and the ambient temperature when used.

Before use, charge the battery pack with a charger suitable for each battery.

For details on the battery charging procedure, refer to the battery charger operation manual.

Note on using the battery pack

A warm battery pack may not be able to be fully recharged.

To attach the battery pack

1. Press the battery pack against the back of the camcorder, aligning the line on the side of the battery pack with the matching line on the camcorder.

2. Slide the battery pack down until its “LOCK” arrow points at the matching line on the camcorder.

If the battery pack is not attached correctly, the terminal may be damaged.
To detach the battery pack

Holding the release button in, pull the battery pack up.

Notes

- During recording and playback (while the ACCESS indicator is lit), be careful never to remove the battery pack.
- Make sure to power the camcorder off before replacing the battery pack.

Using AC power

When using the AC-DN10 AC Adaptor

Mount an AC-DN10 on the camcorder in the same way as a battery pack, then connect to the AC power supply.

The AC-DN10 can supply up to 100 W of power.

CAUTION

When the viewfinder is attached, do not leave the camcorder with the eyepiece facing the sun. Direct sunlight can enter through the eyepiece, be focused in the viewfinder and cause fire.

Note

The viewfinder is supplied separately.

Attaching the Viewfinder

Attaching the HDVF-20A/C35W

Note

When attaching the viewfinder, make notes of the following points.

- Be sure to power off the camcorder before coupling the viewfinder connector to the camcorder’s VF connector. If you make this connection when the camcorder power is on, the viewfinder may not function properly.
- Couple the viewfinder connector firmly to the camcorder’s VF connector. If the coupling is loose, noise may appear on the video or the tally light may not operate properly.

For more information about the connection of the viewfinder and camcorder, contact a Sony service representative.

1. **Loosen the viewfinder left-to-right positioning ring,** 2. **attach the viewfinder to the viewfinder fitting shoe,** and 3. **tighten the viewfinder left-to-right positioning ring.**
2 Couple the viewfinder connector to the VF connector.

Detaching the viewfinder
You can carry out this by following the attaching procedure in reverse order, but there is an additional action to take: when detaching the viewfinder from the fitting shoe, pull up the stopper.

Moving the viewfinder shoe up
1 Loosen the front-to-back viewfinder positioning levers and the front-to-back viewfinder positioning knobs, and then pull the viewfinder slide assembly forward.

2 Using a 2.5 mm diameter hexagonal wrench, detach the viewfinder slide assembly and handle front cover.

Adjusting the viewfinder position
To adjust the viewfinder left-right position, loosen the left-right positioning ring, and to adjust the front-back position, loosen the front-to-back positioning knob.
3 Attach the handle front cover with the bottom edge up.

4 Attach the viewfinder slide assembly, reversing the steps of the removal procedure.

Using the BKW-401 Viewfinder Rotation Bracket

By fitting a BKW-401 Viewfinder Rotation Bracket (not supplied), you can rotate the viewfinder out of the way so that your right leg does not hit the viewfinder while you are carrying the camcorder.

1 Carry out steps 1 and 2 of the previous section “Moving the viewfinder shoe up” to detach the viewfinder slide assembly.

2 Attach the BKW-401 with the supplied bolts.

3 Adjust the front-to-back position so that the arm of the BKW-401 does not touch the handle when it is raised.
Detaching the eyepiece

Removing the eyepiece gives a clearer view of the screen from further away. It is also easy to remove dust from the viewfinder screen and mirror when the eyepiece is detached.

1. Turn the eyepiece locking ring fully counterclockwise, to align the red marks on the locking ring and the viewfinder barrel.

2. Detach the eyepiece.

To reattaching the eyepiece

1. Align the red marks on the eyepiece locking ring and the viewfinder barrel.

2. Align the red mark on the end of the eyepiece end with the red marks on the eyepiece locking ring and the viewfinder barrel. Then insert the eyepiece into the viewfinder barrel.

3. Turn the eyepiece locking ring clockwise until its “LOCK” arrow points at the red mark on the viewfinder barrel.

When the eyecup is worn out, replace it with a new one.

For details of a replacement eyecup, contact a Sony service representative.

Adjusting the viewfinder focus and screen

To adjust the viewfinder focus

Turn the diopter adjustment ring until the viewfinder image is sharpest.

Adjust the brightness, contrast, and peaking of the viewfinder screen with the controls shown below.
Setting the Area of Use

When using the unit for the first time

The area of use is not factory preset. Before using this unit, you need to set this item. (You cannot use the unit without setting this item.)

To set the area of use

1 Set the POWER switch to the ON position.
   The screen for setting the area of use appears in the viewfinder.

2 Press the MENU knob.
   • on the left of NOT SELECTED changes to ? , and you can now select the area of use.
3 Turn the MENU knob to display the desired area of use.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Area of use</th>
</tr>
</thead>
<tbody>
<tr>
<td>NTSC(J)AREA</td>
<td>NTSC area (Japan) a)</td>
</tr>
<tr>
<td>NTSC AREA</td>
<td>NTSC area (for areas other than Japan) b)</td>
</tr>
<tr>
<td>PAL AREA</td>
<td>PAL area c)</td>
</tr>
</tbody>
</table>

a) The composite signal output from this unit is an NTSC signal with no black setup. The system frequency is 59.94i.
b) The composite signal output from this unit is an NTSC signal with a black setup (7.5 IRE). The system frequency is 59.94i.
c) The composite signal output from this unit is a PAL signal. The system frequency is 50i.

4 Set the POWER switch to OFF, then once again to ON.
The unit is now ready for use.

### Setting the Date/Time of the Internal Clock

You can set or change the date and time of the internal clock. The date and time set are reflected in the timecode.

(How to select an item in the menu screen: Turn the MENU knob to move ◀ to the desired item.)

1 Display the TIME/DATE page of the DIAGNOSIS menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

```
D020 TIME/DATE   TOP
    ADJUST : EXEC
    HOUR  :  12
    MIN   :  55
    SEC   :  58
    YEAR  :  08
    MONTH :  03
    DAY   :  31
```

2 Press the MENU knob.
The TIME ADJUST setting window appears.

```
TIME ADJUST   ESC
    HOUR  :  12
    MIN   :  55
    SEC   :  58
    YEAR  :  08
    MONTH :  03
    DAY   :  31
    OK
```

- HOUR: Sets the hour value.
- MIN: Sets the minutes value.
- SEC: Sets the seconds value.
- YEAR: Sets the year.
- MONTH: Sets the month.
- DAY: Sets the day.

3 Turn the MENU knob to move ◀ to the item you want to set, and press the MENU knob.

▶ on the left of the selected item changes to ● and ● on the left of the setting changes to ?.
4 Turn the MENU knob to display the desired value, and press the MENU knob.
   ● changes to ◁ and ? changes to ●.

5 To continue the remaining settings, repeat steps 3 and 4.

6 When you finish settings, turn the MENU knob to move ◁ to “OK”, then press the MENU knob.
The internal clock is set with the date and time set in steps 3 to 5. The TIME/DATE page of the DIAGNOSIS menu appears again. The time set on the TIME ADJUST setting window is displayed.

To cancel the setting
Before executing step 6, move ◁ to “ESC” at the top right of the window and press the MENU knob.
Alternatively, flick the CANCEL/PRST/ESCAPE switch down to the ESCAPE side. All settings or changes are discarded and the TIME/DATE page of the DIAGNOSIS menu appears.

**Note**
When you set the time, also set TIME ZONE.
Set TIME ZONE on the UMID SET page of the OPERATION menu. For details, see “Setting the UMID data” (page 212).

---

Mounting the Lens

First power off the camcorder, and then mount the lens using the following procedure.
*For information about using the lens, refer to the operation manual for the lens.*

1 Push the lens locking lever up and remove the lens mount cap from the lens mount.

2 Align the center pin on the lens with the center slot in the lens mount, and insert the lens into the mount.

3 Holding the lens in place, push the lens locking lever down to lock the lens.

**Caution**
If the lens is not firmly locked, it may come off while the camcorder is being used. This could cause a serious accident. Make sure the lens is firmly locked. It is recommended that the lens mount
If the lens does not stay in focus properly as you zoom from telephoto to wide angle, adjust the flange focal length (the distance from the plane of the lens mounting flange to the imaging plane). Make this adjustment after mounting or changing the lens.

The position of the controls for adjusting the flange focal length vary somewhat from lens to lens. Check the identification of the various controls in the lens manual.

1. Set the iris to manual.
2. Open the iris. Place the flange focal length adjustment chart about 3 m (10 ft) away from the camera, lit well enough to provide a satisfactory video output level.
3. Loosen the fixing screws on the F.f or F.B ring (flange focal length adjustment ring).
4. Use manual or power zoom to set the lens to telephoto.
5. Point the camera at the chart by turning the focus ring and focus on it.
6. Set the zoom ring to wide angle.
7. Turn the F.f or F.B ring until the chart is in focus, being careful not to disturb the focus ring.
Preparing the Audio Input System

Connecting a microphone to the MIC IN connector

You can attach the supplied stereo microphone to the microphone holder of the HDVF-20A viewfinder (not supplied).

1. Loosen the screw and open the microphone holder clamp.

2. Place the microphone in the microphone holder.
   - ① Place the microphone in the holder so that “UP” is at the top.
   - ② Close the microphone holder.
   - ③ Tighten the screw.

3. Plug the microphone cable into the MIC IN connector, then set the AUDIO IN switch for the channel on which you want to record the audio from this microphone to FRONT (for CH-1/CH-2) or F (for CH-3/CH-4).

Repeat steps 4 to 7 until the chart stays in focus all the way from wide angle to telephoto.

Tighten the F.f or F.B ring fixing screws.
4 Secure the microphone cable with the cable clamps.

**Connecting microphones to the AUDIO IN connectors**

You can connect up to two monaural microphones to the AUDIO IN CH1/CH2 connectors, using a CAC-12 Microphone Holder (not supplied).

The following is the procedure for attaching an electret condenser microphone such as the ECM-674/678.

*On how to attach the CAC-12, refer to the operation manual for the CAC-12.*

1 **Attach the electret condenser microphone.**
   
   〇 Loosen the ball joint lock lever.
   ① Wind the microphone spacer (sheet type, supplied with the microphone) around the microphone, while peeling off the protective sheets on both sides of the microphone spacer.
   ③ Place the microphone in the holder so that “UP” is at the top.
   ④ Close the microphone holder.
   ⑤ Tighten the screw.
   ⑥ Position so that the microphone does not interfere with the viewfinder and tighten the ball joint lock lever.

When attaching the ECM-674/678, use the microphone adaptor supplied with the CAC-12 Microphone Holder.

2 **Connect the microphone cable to the AUDIO IN CH1 or CH2 connector.**

3 **Set the switches as follows.**

   Set the LINE / AES/EBU / MIC selector to MIC.
   - Set the +48V/OFF switch indicated below, depending on the power supply type of the microphone.
     
     **Internal power supply:** Set the +48V/OFF switch to OFF.
     **External power supply:** Set the +48V/OFF switch to +48V.
   - Set the AUDIO IN (CH-1/CH-2/CH-3/CH-4) switch for the channel to which the microphone is connected to REAR (for CH-1/CH-2) or R (for CH-3/CH-4).
4 Switch the input level to match the sensitivity of the microphone used.
Switch the input level by changing the REAR MIC REF setting on the AUDIO-1 page of the MAINTENANCE menu (factory default setting is –60 dB). For details, see page 169.

XLR connection automatic detection function
With the XLR connection automatic detection function being on, when a cable is connected to the AUDIO IN CH1 or CH2 connector, the input from that connector is automatically selected for audio recording, regardless of the setting of the AUDIO IN CH-1 or CH-2 switch.
The XLR connection automatic detection function can be switched on or off on the AUDIO-1 page of the MAINTENANCE menu, with the REAR XLR AUTO item.

Notes
- If the input level on this unit is not at an appropriate setting for the microphone sensitivity, loud sounds may be distorted, and the signal-to-noise ratio may be affected.
- In order for the AUDIO IN CH1 and CH2 connectors on the camcorder to be able to provide a phantom 48 V power supply, female XLR connectors (3-pin) are fitted. If the microphone cable has a female connector, use an adaptor.
- When you detach a CAC-12 Microphone Holder once you have attached to the camcorder, be careful not to lose the two screws fixing the CAC-12 (in step 1). After detaching the CAC-12, be sure to put the two screws back into their original places.

---

Attaching a UHF portable tuner (for a UHF wireless microphone system)

To use a Sony UHF wireless microphone system, fit one of the following UHF portable tuners.
- DWR-S01D Digital Wireless Receiver
- WRR-855S UHF Synthesized Tuner Unit
- WRR-860A/861/862 UHF Synthesized Diversity Tuner

For details of these units, refer to the operation manuals for them.

To fit the DWR-S01D or WRR-855S

1 Remove the four fixing screws holding the cover of the portable tuner/receiver housing slot located in the rear of this unit, to remove the cover.

2 Insert the DWR-S01D or WRR-855S into the housing slot, and fasten the four fixing screws.

3 Set the AUDIO IN switch for the channel to which you want to input audio signal to WIRELESS (see page 23).

Notes
- When the XLR connection automatic detection function is on, even if the AUDIO IN CH-1 or CH-2 switch is set to WIRELESS, the signal input to the...
The AUDIO IN CH1 or CH2 connector is automatically selected when an audio cable is connected to the AUDIO IN CH1 or CH2 connector. In such a case, set REAR XLR AUTO to OFF on the AUDIO-1 page of the MAINTENANCE menu. (The factory default setting is OFF.)

- When the LINE / AES/EBU / MIC selector is set to LINE or MIC, the audio signals recorded on audio channels 3 and 4 are not affected by the XLR automatic detection function. They are determined by the settings of the AUDIO IN CH-3 and CH-4 switches.

**To fit the WRR-862 (when using a BP-GL65/GL95/L60S/L80S Battery Pack)**

1. **Attach the WRR tuner fitting (not supplied; service part number: A-8278-057-B) to the back of the camcorder.**
   
   ① Use a Phillips type screwdriver to tighten the four screws placed in the tuner fitting. For three of these screws, insert the screwdriver through the corresponding hole and tighten the screw.

   **Note**
   
   Make sure that all four screws are fully tightened.

   ② Loosen the adjustment screws on the tuner fitting.

   ③ Adjust the tuner fitting position for a BP-GL65/GL95/L60S/L80S Battery Pack to be attached, and tighten the adjustment screws to fix its position.

   ④ Attach the mount plate supplied with the WRR-862.

   *About the WRR tuner fitting (service part number: A-8278-057-B), contact a Sony service or sales representative.*

2. **Attach the battery pack.**

   *On how to attach the battery pack, see “To attach the battery pack” on page 33.*

3. **Mount the tuner on the WRR tuner fitting.**

4. **Connect the tuner power cord to the DC OUT connector of the camcorder, and the audio output cable to the AUDIO IN CH1 or CH2 connector.**

5. **Set the switches as follows.**

   - Set the LINE / AES/EBU / MIC selector for the channel to which the audio output cable is attached to MIC.
   - Set the AUDIO IN (CH-1/CH-2/CH-3/CH-4) switch for the channel to which the audio output cable is connected to REAR (for CH-1/CH-2) or R (for CH-3/CH-4).

   If the XLR connection automatic detection function is on, the input signal for audio recording is selected automatically, and therefore this setting is not required.
Connecting line input audio equipment

Connect the audio output connector of the audio equipment that supplies the line input signal to the AUDIO IN CH1 or CH2 connector.

Switch settings
Set the LINE / AES/EBU / MIC selector for the channel to which the audio signal source is connected to LINE.

Selecting the audio inputs to be recorded
• With the XLR connection automatic detection function being off (the factory default setting): A signal must be selected for audio recording by setting the AUDIO IN CH-1 or CH-2 switch to REAR depending on which of the AUDIO IN CH1 and CH2 connectors is used for connecting the external audio equipment.
• With the XLR connection automatic detection function being on: When a cable is connected to the AUDIO IN CH1 or CH2 connector, the input from that connector is automatically selected for audio recording, regardless of the setting of the AUDIO IN CH-1 or CH-2 switch. The XLR connection automatic detection function can be switched on or off on the AUDIO-1 page of the MAINTENANCE menu, with the REAR XLR AUTO item.
Tripod Mounting

1 Attach the VCT-14 tripod adaptor (not supplied) to the tripod.

2 Mount the camcorder on the tripod adaptor.

---

Note

The tripod adaptor pin may remain in the engaged position even after the camcorder is removed. If this happens, press the red button against the lever a second time and move the lever as shown above until the pin returns to the stowed position. If the pin remains in the engaged position, you will not be able to mount the camcorder on the tripod adaptor.

---

To remove the camcorder from the tripod adaptor

Hold down the red button and pull the lever in the direction of the arrow.
Connecting a Video Light

With this camcorder, you can use the Anton Bauer Ultralight 2 or equivalent video light (powered by 12 V with maximum power consumption of 50 W).

- If you connect the video light to the LIGHT connector on the camcorder and set the LIGHT switch to AUTO, you can turn the light on and off automatically as you start and stop the VDR operation.
- The output of the LIGHT connector on the camcorder is controlled to 12 V even when the camcorder is supplied with over 12 V power (through the DC IN connector or battery pack). The brightness or color temperature of the light will not change according to voltage increase.

**Notes**

- Do not use a video light with power consumption of over 50 W.
- The brightness or color temperature of the light will change when the voltage (supplied through the DC IN connector or from the battery pack) is under 12 V.

**To attach the video light**

Fit the video light to the accessory fitting shoe on the camcorder grip, and connect the video light cable to the LIGHT connector.

**Note**

The accessory fitting shoe on this unit is of the 1/4-inch tapped hole type. If you want to replace this with a slide-type shoe, contact a Sony service representative.

Using the Shoulder Strap

**To attach the shoulder strap**

1. Fit one of the clips to a shoulder strap fitting.

   Pull up the strap to lock the fitting.

   ![Clip]

2. Fit the other clip to the shoulder strap fitting on the other side of the grip in the same way as in step 1.
To remove the shoulder strap

Press here and pull in the direction shown by the arrow to release.

Adjusting the Shoulder Pad Position

You can shift the shoulder pad from its center position (the factory default setting) backward by up to 10 mm (3/8 inch) or forward by up to 25 mm (1 inch). This adjustment helps you get the best balance for shooting with the camcorder on your shoulder.

1 Raise the lever in the center of the shoulder pad to unlock the shoulder pad.
2 Slide the shoulder pad backward or forward until it is in the most convenient position.
3 Bring down the lever to lock the shoulder pad in the selected position.
Connecting the Remote Control Unit

Note

Before connecting/disconnecting a remote control unit to/from the camcorder, be sure to turn the power of the camcorder off.

Connecting the RM-B170/B750 Remote Control Unit enables remote control of the principal camera functions.

Connecting the remote control unit to the REMOTE connector (8-pin) automatically puts the camcorder into remote control mode. If you disconnect the remote control unit, the remote control mode is cancelled.

Camcorder switch functions when the remote control unit is connected

The following switches on the camcorder do not function.

- GAIN selector
- OUTPUT/DCC switch
- WHITE BAL switch
- AUTO W/B BAL switch
- SHUTTER selector
- Button to which the TURBO SWITCH function has been assigned (ASSIGN 1/3/4 switch, COLOR TEMP. button, or RET button on the lens)
- REC START button (and the VTR button on the lens, and the button to which the recording start/stop function has been assigned (ASSIGN 1/3/4 switch, COLOR TEMP. button, or RET button on the lens)) (when the RM REC START item on the CAM CONFIG 2 page of the MAINTENANCE menu is set to RM)
- Buttons to which the COLOR TEMP SW 3200K/4300K/5600K/6300K functions have been assigned (ASSIGN 1/3/4 switches, COLOR TEMP. button, and RET button on the lens)

Paint adjustment when the remote control unit is connected

The settings of the paint adjustment that were in effect the last time the remote control unit was used are recalled.

Function of the recording start/stop buttons when the remote control unit is connected

When the remote control unit is connected, you can make a setting to determine which of the recording start/stop buttons you will use. This setting is made using the RM REC START item on the CAM CONFIG 2 page of the MAINTENANCE menu.

Relationship between the setting of the RM REC START item and the function of recording start/stop buttons

<table>
<thead>
<tr>
<th>Recording start/stop button</th>
<th>Settings of RM REC START</th>
</tr>
</thead>
<tbody>
<tr>
<td>Camcorder’s REC START button</td>
<td>Disabled Enabled Enabled</td>
</tr>
<tr>
<td>Lens VTR button</td>
<td>Disabled Enabled Enabled</td>
</tr>
<tr>
<td>Button to which the recording start/stop function has been assigned (camcorder ASSIGN 1/3/4 switch, COLOR TEMP. button, or RET button on the lens)</td>
<td>Disabled Enabled Enabled</td>
</tr>
<tr>
<td>Remote control unit’s VTR button</td>
<td>Enabled Disabled Enabled</td>
</tr>
</tbody>
</table>
When the monitor is connected to the MONITOR OUT connector of the remote control unit

The MONITOR connector (BNC type) of the RM-B170/B750 outputs the same signal as that from the TEST OUT connector on the camcorder. Use the black cable supplied with the RM-B170/B750 to connect the monitor to the MONITOR connector on the RM-B170/B750.

When the remote control unit is disconnected from the camcorder

The camcorder settings return to the settings in effect before the remote control unit was connected.

Structure of the paint adjustment data

The non-volatile memory of the camcorder used for storing paint adjustment data consists of two regions as shown below: one is the “independent data region” that is used when a remote control unit is not connected, and the other is the “remote control data region” that is used when a remote control unit is connected. Paint adjustment data is automatically selected and output to the camera section depending on whether or not a remote control unit such as the RM-B170 is connected.

Thus, when a remote control unit is connected to the camcorder, the effective data region is switched to the “remote control data region” and the settings of the paint adjustment that were in effect the last time the remote control unit was used are recalled.

The settings of the absolute value rotational controls 1) and absolute value switches 2) are overwritten by those on the remote control unit after the remote control unit is connected.

When the remote control unit is disconnected from the camcorder, the “independent data region” becomes effective. Thus the camcorder will return to the settings that were in effect before the remote control unit was connected.

1) Absolute value rotational controls: The data corresponding to the angular position of controls is output. Rotational controls for which the data corresponding to the amount of their rotation is output are called relative value controls.

2) Absolute value switches: Like toggle switches or slide switches (except momentary switches), the switches (or knobs) whose positions must coincide with their functions are called absolute value switches.

When RM COMMON MEMORY on the CAM CONFIG 2 page of the MAINTENANCE menu is set to “ON”, you can use settings of the paint adjustment data stored in the independent data region even if you connect the remote control unit. In this case, the settings stored in the independent data region will be renewed when you change the settings on the remote control unit. Thus, the settings of the paint data made with the remote control unit can be retained even if the remote control unit is removed. However, if the switch position on the remote control unit differs from the one on the camcorder, the switch position on the camcorder takes precedence over that on the remote control unit.

Also, it is possible to keep the settings that are in effect before you connect the remote control unit. In this case, you should set the control knob to the relative value mode on the remote control unit.

For details, refer to the operation manual supplied with the remote control unit.
Chapter 3  Adjustments and Settings for Shooting

Setting the Recording Format

The recording formats supported by this camcorder are as follows.

**Video**

<table>
<thead>
<tr>
<th>Recording format</th>
<th>Resolution</th>
<th>System frequency a)</th>
</tr>
</thead>
<tbody>
<tr>
<td>MPEG HD422 50</td>
<td>1080</td>
<td>59.94i/50i</td>
</tr>
<tr>
<td>(Bit rate: 50 Mbps)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MPEG HD420 HQ/SP</td>
<td>1080</td>
<td>59.94i/50i</td>
</tr>
<tr>
<td>(Bit rate: 35/25</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Mbps)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MPEG IMX 50/40/30</td>
<td>525</td>
<td>59.94i</td>
</tr>
<tr>
<td>(Bit rate: 50/40/30</td>
<td>625</td>
<td>50i</td>
</tr>
<tr>
<td>Mbps)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>DVCAM</td>
<td>525</td>
<td>59.94i</td>
</tr>
<tr>
<td>(Bit rate: 25 Mbps)</td>
<td>625</td>
<td>50i</td>
</tr>
</tbody>
</table>

a) 59.94i: When the area of use is set to NTSC(J)AREA/NTSC AREA.
50i: When the area of use is set to PAL AREA.

**Audio**

<table>
<thead>
<tr>
<th>Recording format</th>
<th>Number of channels</th>
</tr>
</thead>
<tbody>
<tr>
<td>24bit/48kHz</td>
<td>8 channels a)</td>
</tr>
<tr>
<td></td>
<td>4 channels b)</td>
</tr>
<tr>
<td>16bit/48kHz</td>
<td>8 channels b)</td>
</tr>
<tr>
<td></td>
<td>4 channels c)</td>
</tr>
</tbody>
</table>

a) When the video recording format is set to MPEG HD422 50.
b) When the video recording format is set to MPEG IMX 50/40/30.
c) When the video recording format is set to MPEG HD420 HQ/SP or DVCAM.

**Notes**

- It is not possible to combine material recorded at different system frequencies on a single disc (see page 53).

- This unit can record up to four channels of audio. If you select a format with eight channels of audio, silence is recorded in channels 5 to 8.

Setting the system frequency

The system frequency is set automatically according to the area of use setting (page 38).

**NTSC(J) AREA, NTSC AREA:** 59.9i
**PAL AREA:** 50i

The system frequency and the area of use setting can be checked on the FORMAT page of the OPERATION menu.

```
?024OFORMAT TOP
SYSTEM FREQUENCY: 59.91
REC FORMAT : HD422 50
COUNTRY : NTSC (J) AREA
```

For details on menu operations, see “Basic menu operations” on page 189.

Change the COUNTRY setting when changing the system frequency.

Setting the video recording format

1. Display the FORMAT page of the OPERATION menu.

   For details on menu operations, see “Basic menu operations” on page 189.

2. Select REC FORMAT, and turn the MENU knob to select the desired recording format.

   As you turn the MENU knob, the recording format changes as follows: HD422 50 ↔ HD420 HQ ↔ HD420 SP ↔ IMX 50 ↔ IMX 40 ↔ IMX 30 ↔ DVCAM.

   To set the aspect ratio (when IMX 50, IMX 40, IMX 30, or DVCAM is selected)

   Select ASPECT RATIO(SD) on the FORMAT page, and turn the MENU knob to select the desired aspect ratio.
As you turn the MENU knob, the aspect ratio changes as follows: 16:9 ↔ 4:3.

As long as the system frequency is the same, clips in different recording formats can be recorded or written to the same disc. ¹)

In this manual, this is referred to as “mixed format recording mode”.

¹) The recording format is regarded as different whenever the system frequency, video resolution, video codec/bit rate, or number of audio channels or number of bits does not match.

Notes

- Regardless of system frequency matching, it is not possible to mix clips with different video resolutions (number of system lines) in the same clip list.
- When the unit is in a mode that calls for playback across clips that were recorded in different recording formats, video and audio playback may stop at the point where the format changes from one format into another, and then start again.

You can record clips with different recording formats, for example HD422 and HD420SP clips, by putting this unit into mixed format recording mode.

To enable mixed format recording mode
Set MIXED RECORDING on the CAM CONFIG 1 page of the MAINTENANCE menu to “ENABL”.

If you want to disable mixing of clips with different recording formats, leave this item set to “DSABL”. However, regardless of the mixed format recording mode setting, it is always possible to mix clips in the following formats.

- HD420 HQ, SP, and LP

---

Note

The unit ignores this setting when it records video from external devices (see page 95).

To set the audio recording format (when IMX 50, IMX 40, or IMX 30 is selected)
Select AU DATA LEN(IMX) on the FORMAT page or AUDIO-2 page of the MAINTENANCE menu, and turn the MENU knob to select the desired audio recording format.

As you turn the MENU knob, the audio recording format changes as follows: 16bit ↔ 24bit.
To ensure excellent image quality when using this camcorder, conditions may require that both the black balance and the white balance be adjusted.

**Black balance adjustment**

The black balance will require adjustment in the following cases.
- When the camcorder is used for the first time
- When the camcorder has not been used for a long time
- When the camcorder is used under conditions in which the surrounding temperature has changed greatly
- When the GAIN selector (L/M/H) values have been changed by using the USER menu

It is not usually necessary to adjust the black balance when using the camcorder after it has been off.

**White balance adjustment**

Always readjust the white balance when the lighting conditions change.

**Viewfinder screen displays**

If the black balance or white balance adjustment is started, messages that report on the progress and results are displayed on the viewfinder screen when the VF DISP MODE item is set to “2” or “3” on the VF DISP 1 page of the USER menu.

---

**Notes**

Black balance and white balance adjustment values that are automatically set by the camcorder and the various settings are stored in the camcorder memory and retained even when the power is turned off.

---

**Adjusting the black balance**

In automatic black balance mode, adjustments are performed in the following order: black set and black balance. Manual black balance adjustment can be selected from the setup menu.

*For details of manual black balance adjustment, refer to the Maintenance Manual.*

---

**If automatic black balance adjustment cannot be made**

If the black balance adjustment cannot be completed normally, an error message will appear for about 3 seconds on the viewfinder screen.
Possible messages are listed below.

<table>
<thead>
<tr>
<th>Error message</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABB : NG IRIS NOT CLOSE</td>
<td>The lens iris did not close; adjustment was impossible.</td>
</tr>
<tr>
<td>ABB : NG TIME LIMIT</td>
<td>Adjustment could not be completed within the standard number of attempts.</td>
</tr>
<tr>
<td>ABB : NG R (or G or B) : OVERFLOW</td>
<td>The difference between the reference value and the current value is so great that it exceeds the range. Adjustment was impossible.</td>
</tr>
</tbody>
</table>

If any of the above error messages is displayed, retry the black balance adjustment.
Keep pushing the AUTO W/B BAL switch to BLK until “-BLACK SET-” appears after “-BLACK BALANCE-” appears. If the error message occurs again, an internal check is necessary.

For information about this internal check, refer to the Maintenance Manual.

**Note**

If the lens cable is not firmly connected to the LENS connector, it may not be possible to adjust the lens iris. If this happens, the black balance will be incorrect.

**Black balance memory**

Values stored in memory are held until the black balance is next adjusted.

**If a memory error occurs**

If the error message “: STORED DATA : NG” flashes on the viewfinder screen when the camcorder is turned on, the black balance and white balance memory contents have been lost. Adjust the black balance and white balance again. Contact a Sony representative if this message continues to appear even after the black balance and white balance have been adjusted again.

For details, refer to the Maintenance Manual.

**Adjusting the white balance**

1. Set the switches and selectors as shown in the figure below.

**FILTER selector (inner knob)**

<table>
<thead>
<tr>
<th>ND filter setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/CLEAR</td>
</tr>
<tr>
<td>2/1/4 ND</td>
</tr>
<tr>
<td>3/1/16 ND</td>
</tr>
<tr>
<td>4/1/64 ND</td>
</tr>
</tbody>
</table>

If the setting of the FILTER selector is changed, a message reporting the setting appears for about 3 seconds in the setting change and adjustment progress message display area of the viewfinder screen (in display mode 3).
3  Place a white test card under the same lighting conditions as for the subject to be shot and zoom up to it.
Alternatively, any white object such as a cloth or a wall can be used.
The absolute minimum white area is as follows.

Rectangle centered on the screen. The lengths of the sides are 70% of the length and width of the screen.

The white object must be within the rectangle and have an area of at least 10% of the screen.

Note
Make sure there are not bright spots in the rectangle.

4  Adjust the lens iris.
Manually adjusted lens: set the iris to an appropriate setting.
Lens with automatic iris: set the automatic/manual switch on the lens to automatic.

5  Flick the AUTO W/B BAL switch to WHT and then release the switch.

The white balance adjustment ends in about one second with the message shown in the following figure, and the adjustment setting is automatically stored in the memory (A or B) that was selected in step 1.

The white object must be within the rectangle and have an area of at least 10% of the screen.

Note
If the camera has a zoom lens with an automatic iris, the iris may hunt 1) during the adjustment. To prevent this, adjust the iris gain knob (indicated as IG, IS, or S) on the lens.
For details, refer to the lens operation manual.

1) Hunting: Repeated brightening and darkening of the image, resulting from repeated response to automatic iris control.

If the automatic white balance adjustment cannot be made
If the white balance adjustment cannot be completed normally, an error message will appear for about 3 seconds on the viewfinder screen. Possible messages are listed below.

Approximate color temperature of the subject

Note
If the white balance adjustment cannot be completed normally, an error message will appear for about 3 seconds on the viewfinder screen. Possible messages are listed below.
### Error message Meaning

<table>
<thead>
<tr>
<th>Error message</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>WHITE : NG LOW LEVEL</td>
<td>The white video level is too low. Either open the lens iris or increase the gain.</td>
</tr>
<tr>
<td>WHITE : NG COLOR TEMP HIGH</td>
<td>The color temperature is too high.</td>
</tr>
<tr>
<td>WHITE : NG COLOR TEMP LOW</td>
<td>The color temperature is too low.</td>
</tr>
<tr>
<td>WHITE : NG TIME LIMIT</td>
<td>Adjustment could not be completed within the standard number of attempts.</td>
</tr>
<tr>
<td>WHITE : NG POOR WHITE AREA</td>
<td>The white area could not be checked.</td>
</tr>
<tr>
<td>WHITE : NG OVER LEVEL</td>
<td>The white video level is too high. Either stop down the lens iris or change the ND filter.</td>
</tr>
</tbody>
</table>

If any of the above error messages is displayed, retry the white balance adjustment. If the error message occurs again, an internal check is necessary.

*For information about this internal check, refer to the Maintenance Manual.*

### If you have no time to adjust the white balance

Set the WHITE BAL switch to PRST.

This makes it possible to automatically set the white balance to 5600K (factory default value) by pressing the COLOR TEMP. button. The color temperature to which the white balance is set when the COLOR TEMP. button is pressed can be selected from among 3200K, 4300K, 5600K, and 6300K on the ASSIGNABLE SW page of the OPERATION menu. You can also assign color temperatures to the ASSIGN 1/3/4 switches and the RET button on the lens.

*For details of automatic white balance adjustment, see page 55.*

#### To change the color temperature when the ND filter is switched

You can assign electrical CC (color correction) filters to ND filters (see page 13). This allows you to change the color temperature automatically when the ND filter is switched.

1. Display the WHITE FILTER page of the MAINTENANCE menu.

   ![Menu Screenshot]

   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Select ND FILTER CTEMP, and turn the MENU knob to display “ON”.

3. To assign an electrical CC filter to FILTER selector position number 1, select “ND FLT CTEMP <1>”. To assign it to positions 2 to 4, select “ND FLT CTEMP 2-4”.

4. Turn the MENU knob to display the desired color temperature.

   As you turn the MENU knob, the color temperature changes as follows: 3200K ↔ 4300K ↔ 5600K ↔ 6300K.

5. Repeat steps 3 and 4 as required.

### To switch between electrical CC filters with an ASSIGN switch

You can assign the function that switches between electrical CC filters to an ASSIGN switch. This allows you to switch between color temperatures (3200K/4300K/5600K/6300K) that have been assigned to up to four positions (A to D) with each press of the ASSIGN switch. Regardless of assignments to ASSIGN switches, you can also switch between the color temperatures assigned to each position from a remote control unit.  

1) When the RM-B170/B750, MSU-900/950, or RCP-750/751/920/921 is connected.

1. Display the WHITE FILTER page of the MAINTENANCE menu.

   *For details on menu operations, see “Basic menu operations” on page 189.*
2. Select the position to which to assign a CC filter by selecting one of “ELECTRICAL CC <A>” to “ELECTRICAL CC <D>”, and then turn the MENU knob to select the desired color temperature. As you turn the MENU knob, the color temperature changes as follows: 3200K → 4300K → 5600K → 6300K.

To set no color temperature, select “-----” with ELECTRICAL CC <C> or <D> selected. When the ASSIGN switch is pressed, the setting for that position is not displayed. For example, if “-----” is set for one position, then switching between the remaining three positions is carried out.

3. Repeat step 2 as required.

4. Assign the electrical CC filter switching function (ELECTRICAL CC) to an ASSIGN 1/3/4 switch, the COLOR TEMP. button, or the RET button on the lens (see page 204).

White balance memory
Values stored in memory are held until the white balance is next adjusted. There are two sets of white balance memories, A and B, and adjustments for each of the ND filters can be automatically stored in the memory corresponding to the setting (A or B) of the WHITE BAL switch. The camcorder has four built-in ND filters, so a total of eight (4 × 2) adjustments can be stored. However, the memory contents are not linked to the ND filter settings in the following cases:
- When the number of memories allocated to each of A and B is limited to one by setting the FILTER WHT MEM item on the WHITE SETTING page of the OPERATION menu to OFF.
- When the electrical CC filter switching function has been assigned to an ASSIGN switch, or when a remote control unit has been connected. (In these cases, the contents of white balance memory are linked to electrical CC filter positions (A to D).)
If the WHITE BAL switch is set to B, and on the WHITE SETTING page of the OPERATION menu, the WHITE SWITCH <B> item is set to “ATW (Auto Tracing White Balance)”, the ATW function is activated to automatically adjust the white balance of the picture being shot for varying lighting conditions.

To save white balance settings obtained by ATW
Set ATW HOLD MEMORY in the WHITE SETTING page of the OPERATION menu to “ON”. When this is done, auto white balance settings obtained by ATW are written to the memory corresponding to the setting (A or B) that is currently selected with the WHITE BAL switch. 1) You can then turn ATW off and continue shooting with the current white balance values. The unit continues to use the values that were in effect immediately before ATW was turned off.
1) This function is not available when the WHITE BAL switch is set to PRST. If you have connected a remote control unit, the unit uses the memory corresponding to the remote control unit setting (A, B, or C).
Setting the Electronic Shutter

If a memory error occurs

If the error message "STORED DATA: NG" flashes on the viewfinder screen when the camcorder is turned on, the white balance and black balance memory contents have been lost. Adjust the white balance and black balance again. Contact a Sony representative if this message continues to appear even after the white balance and black balance have been adjusted again. For details, refer to the Maintenance Manual.

The shutter modes that can be used with the electronic shutter and the shutter speeds that can be selected are listed below.

**Standard mode**
Select this mode for shooting fast-moving subjects with little blurring.

<table>
<thead>
<tr>
<th>System frequency</th>
<th>Shutter speed (unit: seconds)</th>
</tr>
</thead>
<tbody>
<tr>
<td>59.94i</td>
<td>1/100, 1/125, 1/250, 1/500, 1/1000, 1/2000</td>
</tr>
<tr>
<td>50i</td>
<td>1/60, 1/125, 1/250, 1/500, 1/1000, 1/2000</td>
</tr>
</tbody>
</table>

**ECS (Extended Clear Scan) mode**
Select this mode for obtaining images with no horizontal bands of noise when shooting subjects such as monitor screens.

<table>
<thead>
<tr>
<th>System frequency</th>
<th>Shutter speed (unit: Hz)</th>
</tr>
</thead>
<tbody>
<tr>
<td>59.94i</td>
<td>60.00 to 4300</td>
</tr>
<tr>
<td>50i</td>
<td>50.00 to 4700</td>
</tr>
</tbody>
</table>

**SLS (slow speed shutter) mode**
Select this mode for shooting subjects in low level lighting conditions.

**Shutter speed** (unit: frames): 2, 3, 4, 5, 6, 7, 8, 16

**Notes**
- Whatever the operating mode of the electronic shutter, the sensitivity decreases with increasing shutter speed.
- When the automatic iris is used, the iris opens wider as the shutter speed increases, thus reducing the depth of field.
- Under artificial light, particularly fluorescent or mercury lamps, the light intensity may appear to be constant, but the red, green, and blue intensities are actually changing in synchronization with the frequency of the power supply causing flicker. Using an electronic shutter under such lighting could...
make the flicker even worse. Color flicker is particularly likely to happen when the power supply frequency is 60 Hz. In this case, setting FLICKER REDUCE to ON or AUTO on the CIS COMP page in the OPERATION menu can reduce flicker. If the power frequency is 50 Hz, setting the shutter speed to $\frac{1}{100}$ can reduce this flicker.

- The selectable shutter speeds vary depending on the current system frequency.

### Selecting the shutter mode and shutter speed

**Switching the shutter mode, and the shutter speed in standard mode:** Repeatedly flick the SHUTTER selector to the SELECT side (see the next section).

**Switching the shutter speed in ECS mode and SLS mode:** Select ECS mode or SLS mode with the SHUTTER selector, and then turn the MENU knob (see page 60).

You can use the SHT ENABLE page of the OPERATION menu to narrow the range of choice in advance, or to select in advance whether or not you use ECS or SLS.

### To set the shutter mode and standard-mode shutter speed

Once the shutter speed is selected, it is retained even when the camcorder power is turned off.

1. Follow the procedure described in “Selecting the display items” on page 197 to set the VF DISPLAY MODE item to “2” or “3” on the VF DISP 1 page of the USER menu.

2. Flick the SHUTTER selector from ON to SELECT.

   The current shutter setting indication appears for about 3 seconds in the setting change and adjustment progress message display area of the viewfinder screen.

   Examples: “: SS : 1/250”, “: ECS : 60.0 Hz”

3. Before the shutter setting indication disappears, flick the SHUTTER selector down to SELECT again and repeat this until the desired mode or speed appears.

   When all modes and speeds are displayed, the display changes in the following order.

   Standard mode (with system frequency: 59.94i) [diagram]

   - 1/100 → 1/125 → 1/250 → 1/500 → 1/1000 → 1/2000
   - SLS mode ← ECS mode ←

   If you have changed the configuration, only the selected modes and speeds appear.

- When the unit is shipped from the factory, it is configured to display all of the modes and speeds in “Shutter modes” on page 59, except SLS mode. You can change this configuration by selecting only the required modes and speeds on the SHT ENABLE page of the OPERATION menu (see page 154).

- Shutter speeds in standard mode can also be switched to angle display by using SHT DISP MODE in the CAM CONFIG 2 page of the MAINTENANCE menu (see page 175).

### To set the shutter speed in ECS or SLS mode

1. Set the shutter speed mode to ECS or SLS (see the previous item).

2. Turn the MENU knob to select the desired frequency or number of frames.

**When the RM-B170 Remote Control Unit is connected**

You can set the shutter speed of ECS or SLS with the rotary encoder of the RM-B170.
To change the range of choice of shutter mode and speed settings

You can reduce the time required to select the shutter mode and speed by narrowing the choice of settings in advance. This can be done by using the SHT ENABLE page of the OPERATION menu.

**Note**
The settings selected on the SHT ENABLE page of the OPERATION menu become invalid when the RM-B170 or another remote control unit is connected to the camcorder.

1. **Display the SHT ENABLE page of the OPERATION menu, and press the MENU knob.**
   
   *For details on menu operations, see “Basic menu operations” on page 189.*

   ![Menu Layout](image)

   0220SHT ENABLE
   
   →SHUTTER ECS : ● ON
   SHUTTER SLS : ● OFF
   SHUTTER 1/100 : ● ON
   SHUTTER 1/125 : ● ON
   SHUTTER 1/250 : ● ON
   SHUTTER 1/500 : ● ON
   SHUTTER 1/1000 : ● ON
   SHUTTER 1/2000 : ● ON

2. **Turn the MENU knob to move ● to the shutter mode or shutter speed you want, then press the MENU knob.**
   
   ● on the left of the selected item changes to ● and ● on the left of the setting changes to ●.

3. **Turn the MENU knob until ON appears, then press the MENU knob.**
   
   ● on the left of the selected item changes to ● and ● on the left of the setting changes to ●.
   
   To set another mode or speed, return to step 2.

   Note that only the shutter speeds set to ON can be selected with the SHUTTER selector.

4. **To end the menu operation, set the MENU ON/OFF switch to OFF or close the cover of the menu operating section.**

   The menu disappears from the screen and the display indicating the current status of the camcorder appears along the top and bottom of the screen.
Changing the Reference Value for Automatic Iris Adjustment

The reference value for automatic iris adjustment can be changed to aid the shooting of clear pictures of back-lit subjects, or to prevent blown-out highlights. The reference value for the lens iris can be set within the following range with respect to the standard value.

- 0.25 to 1 (increasing by increments of 0.25):
  About 0.25 to 1 stop further open
- –0.25 to –1 (decreasing by increments of 0.25):
  About 0.25 to 1 stop further close

Also you can set the area where light detection occurs.

To change the reference value
(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1. Display the AUTO IRIS page of the OPERATION menu, and press the MENU knob.

   For details on menu operations, see “Basic menu operations” on page 189.

2. Check that the mark is at the IRIS OVERRIDE position, and then press the MENU knob.

   on the left of the selected item changes to and on the left of the setting changes to ?.

3. Turn the MENU knob until “ON” appears, then press the MENU knob.

   on the left of the selected item changes to and ? on the left of the setting changes to .

   The IRIS OVERRIDE item is set to “ON”.

4. Set the MENU ON/OFF switch to OFF. The AUTO IRIS page disappears from the screen.

5. Turn the MENU knob to change the reference value.

   **Note**

   Be sure to confirm that the current shutter mode is not ECS.

   The changed reference value is retained until the power of the camcorder is turned off. Even if the reference value is changed, it reverts to the standard value every time the power is turned on.

   **To make the iris more open**

   Turn the MENU knob counterclockwise as seen from the front of the camera. The iris stop indicators as shown in the following table appear in the upper part to the left of the F number in the iris indication.

<table>
<thead>
<tr>
<th>Iris stop</th>
<th>Indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.25</td>
<td>□</td>
</tr>
<tr>
<td>0.5</td>
<td>□</td>
</tr>
<tr>
<td>0.75</td>
<td>□□</td>
</tr>
<tr>
<td>1</td>
<td>□□</td>
</tr>
</tbody>
</table>

   **To stop down the iris**

   Turn the MENU knob clockwise as seen from the front of the camera. The iris stop indicators as shown in the following table appear in the lower part to the left of the F number in the iris indication.

<table>
<thead>
<tr>
<th>Iris stop</th>
<th>Indicator</th>
</tr>
</thead>
<tbody>
<tr>
<td>–0.25</td>
<td>□</td>
</tr>
<tr>
<td>–0.5</td>
<td>□</td>

<tr>
<td>–0.75</td>
<td>□□</td>
</tr>
<tr>
<td>–1</td>
<td>□□</td>
</tr>
</tbody>
</table>
Changing the Reference Value for Automatic Iris Adjustment

Chapter 3 Adjustments and Settings for Shooting

When the RM-B170 Remote Control Unit is connected

The IRIS control knob of the RM-B170 can be used for lens iris setting. In this case, the indicator is not displayed.

To set the automatic iris window

1. Follow the procedure of steps 1 and 2 described in the previous item to display the AUTO IRIS page.

2. Turn the MENU knob to move ◀ to IRIS WINDOW IND, then press the MENU knob.
   ◀ on the left of IRIS WINDOW IND changes to ● and ● on the left of the setting changes to ?.

3. Turn the MENU knob until ON appears, then press the MENU knob.
   ● changes to ◀ and ? changes to ●.
   The currently selected auto iris window appears on the screen.
   If it is not necessary to display the auto iris window on the screen, set to OFF.

4. Turn the MENU knob to move ◀ to IRIS WINDOW, then press the MENU knob.
   ◀ changes to ● and ● changes to ?.

5. Turn the MENU knob until the desired auto iris window appears, then press the MENU knob.
   ● changes to ◀ and ? changes to ●.

If you select “VARIABLE”, the following items become effective and you can set the window of the desired size. Set each item to the desired size.

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>IRIS VAR WIDTH</td>
<td>The width of the window</td>
</tr>
<tr>
<td>IRIS VAR HEIGHT</td>
<td>The height of the window</td>
</tr>
<tr>
<td>IRIS VAR H POS.</td>
<td>The position of the window in the horizontal direction</td>
</tr>
<tr>
<td>IRIS VAR V POS.</td>
<td>The position of the window in the vertical direction</td>
</tr>
</tbody>
</table>

6. Set the MENU ON/OFF switch to OFF.
   The menu disappears from the screen and the display indicating the current status of the camcorder appears along the top and bottom of the screen.

To counter problems with very bright highlights

If the subject is too bright, the iris may close too much, leaving the overall image dark, or the highlights may be blown out. In such cases, setting the highlight clip function on reduces the luminance range, avoiding problems from the automatic iris correction.

In the AUTO IRIS page of the USER menu, set the CLIP HIGH LIGHT item to ON.
Adjusting the Audio Level

Setting the AUDIO SELECT CH-1/CH-2 switches to AUTO automatically adjusts the input levels of the audio signal to be recorded in audio channels 1 and 2. You can also adjust the audio level manually.

For audio channels 3 and 4, menu settings allow you to select automatic adjustment, manual adjustment, or fixed.

**Target audio level for automatic audio level adjustment**

Make adjustment using –20 dB as the target level. If the audio level meter shows a maximum level of 0 dB, then it indicates that the input audio level is excessive.

With the XLR connection automatic detection function being on, when a cable is connected to the AUDIO IN CH1 or CH2 connector, the input from these connectors is automatically selected for audio recording. In this case, start the operation from step 2.

You can turn on and off the XLR connection automatic detection function on the AUDIO-1 page of the MAINTENANCE menu.

### Manually adjusting the audio levels of the audio inputs from the AUDIO IN CH1/CH2 connectors

With the XLR connection automatic detection function being on, when a cable is connected to the AUDIO IN CH1 or CH2 connector, the input from these connectors is automatically selected for audio recording. In this case, start the operation from step 2.

You can turn on and off the XLR connection automatic detection function on the AUDIO-1 page of the MAINTENANCE menu.

### Correspondence between recording level adjustments and audio level controls

On the AUDIO-3 page of the MAINTENANCE menu, you can select which audio level control controls the audio recording level of the input to each of the AUDIO IN CH1/CH2 connectors. The correspondences between the settings of the menu items and the controls are as follows.

**REAR1/WRR LEVEL:** Audio recording level of channel 1

<table>
<thead>
<tr>
<th>Setting</th>
<th>Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIDE1</td>
<td>LEVEL (CH-1) control (on the left)</td>
</tr>
<tr>
<td>FRONT</td>
<td>MIC LEVEL control</td>
</tr>
<tr>
<td>F+S1</td>
<td>LEVEL (CH-1) control linked with MIC LEVEL control</td>
</tr>
</tbody>
</table>
REAR2/WRR LEVEL: Audio recording level of channel 2

<table>
<thead>
<tr>
<th>Setting</th>
<th>Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIDE2</td>
<td>LEVEL (CH-2) control (on the right)</td>
</tr>
<tr>
<td>FRONT</td>
<td>MIC LEVEL control</td>
</tr>
<tr>
<td>F+S2</td>
<td>LEVEL (CH-2) control linked with MIC LEVEL control.</td>
</tr>
</tbody>
</table>

**Note**
When you have operation of the LEVEL (CH-1/CH-2) controls and MIC LEVEL control linked together, if the MIC LEVEL control is set to 0, the audio signals on channels 1 and 2 cannot be recorded. Check the position of the MIC LEVEL control before adjusting the LEVEL (CH-1/CH-2) controls.

### Manually adjusting the audio level of the MIC IN connector

**Note**
If the XLR connection automatic detection mode is on, when the cables are connected to the AUDIO IN CH1/CH2 connectors, the camcorder detects the connection to the AUDIO IN CH1/CH2 connectors. Thus, the AUDIO IN switches are internally reset to REAR and the audio signals input to the AUDIO IN CH1/CH2 connectors are automatically selected.

Before adjusting the audio level of the front microphone, confirm that no cables are connected to the AUDIO IN CH1/CH2 connectors. Alternatively, set the REAR XLR AUTO item to OFF on the AUDIO-1 page of the MAINTENANCE menu.

1. Set either or both of the AUDIO IN switch(es) to FRONT.
2. Set the AUDIO SELECT switch(es) for the desired channel(s) selected in step 1 to MANUAL.
3. Turn the MIC LEVEL control, and adjust so that the audio level meter shows up to –20 dB for a normal input volume.

### Correspondence between recording level adjustments and audio level controls

On the AUDIO-3 page of the MAINTENANCE menu, you can select which audio level control controls the audio recording level of the front microphone input. The correspondences between the settings of the menu items and the controls are as follows.

**MIC CH1 LEVEL:** Audio recording level of channel 1

<table>
<thead>
<tr>
<th>Setting</th>
<th>Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIDE1</td>
<td>LEVEL (CH-1) control (on the left)</td>
</tr>
<tr>
<td>FRONT</td>
<td>MIC LEVEL control</td>
</tr>
<tr>
<td>F+S1</td>
<td>LEVEL (CH-1) control linked with MIC LEVEL control.</td>
</tr>
</tbody>
</table>

**MIC CH2 LEVEL:** Audio recording level of channel 2

<table>
<thead>
<tr>
<th>Setting</th>
<th>Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>SIDE2</td>
<td>LEVEL (CH-2) control (on the right)</td>
</tr>
<tr>
<td>FRONT</td>
<td>MIC LEVEL control</td>
</tr>
<tr>
<td>F+S2</td>
<td>LEVEL (CH-2) control linked with MIC LEVEL control.</td>
</tr>
</tbody>
</table>

**Note**
When you have operation of the MIC LEVEL control and LEVEL (CH-1/CH-2) controls linked together, if the LEVEL (CH-1/CH-2) controls are set to 0, the audio signals on channels 1 and 2 cannot be recorded. Check the position of the LEVEL (CH-1/CH-2) controls before adjusting the MIC LEVEL control.

### Recording audio on channels 3 and 4

### Selecting the recorded audio

You can select the audio recorded on audio channels 3 and 4 with the AUDIO IN CH-3/CH-4 switches, or you can have the selection made automatically, as follows.
To automatically select the same audio as on channels 1 and 2

On the AUDIO-1 page of the MAINTENANCE menu, set the AUDIO CH3/4 MODE item to “CH 1/2”.

Note

When the LINE / AES/EBU / MIC selector is set to LINE or MIC, the audio signals recorded on audio channels 3 and 4 are not affected by the XLR automatic detection function. They are determined by the settings of the AUDIO IN CH-3 and CH-4 switches.

Adjusting the audio recording levels

To adjust automatically

Set AU CH34 AGC MODE on the AUDIO-2 page of the MAINTENANCE menu to STREO or MONO.

To adjust manually

1. Set AU CH34 AGC MODE on the AUDIO-2 page of the MAINTENANCE menu to OFF.

2. Set AUDIO CH3 LEVEL (for audio channel 3) and AUDIO CH4 LEVEL (for audio channel 4) on the AUDIO-3 page of the MAINTENANCE menu to FRONT.

The levels of audio channels 3 and 4 can now be adjusted with the MIC LEVEL control.

To set to a fixed value

In step 2 of the previous procedure “To adjust manually”, set the menu items to FIX.
Setting the Time Data

Setting the timecode

The timecode setting range is from 00:00:00:00 to 23:59:59:29 (hours:minutes:seconds:frames).

1. Set the DISPLAY switch to TC.
2. Set the PRESET/REGEN/CLOCK switch to PRESET.
3. Set the F-RUN/SET/R-RUN switch to SET.
   The first (leftmost) digit of timecode flashes.
4. Use the up and down arrow buttons to change values, and use the left and right arrow buttons to move the flashing digit. Repeat until all digits are set.
   To reset the timecode value to 00 00 00 00
   Press the RESET/RETURN button.
5. Set the F-RUN/SET/R-RUN switch to F-RUN or R-RUN.

F-RUN: Free run. The timecode generator keeps running.
R-RUN: Recording run. The timecode generator runs only while recording.

To set the drop frame mode/non-drop frame mode
You can select the drop frame (DF) mode or non-drop frame (NDF) mode on the TIMECODE page of the MAINTENANCE menu.

To make the timecode consecutive
When the F-RUN/SET/R-RUN switch is set to R-RUN, recording a number of scenes on the disc normally produces consecutive timecode. However, once you remove the disc and record on another disc, the timecode will no longer be consecutive when you use the original disc again for recording. In this case, to make the timecode consecutive, set the PRESET/REGEN/CLOCK switch to REGEN.

Saving the real Time in the Timecode
Setting the PRESET/REGEN/CLOCK switch to CLOCK saves the real time in the timecode. When it is necessary to set the actual time, use the TIME/DATE page of the DIAGNOSIS menu.

For details, see “Setting the Date/Time of the Internal Clock” on page 39.

Setting the user bits

By setting the user bits (up to 8 hexadecimal digits), you can record user information such as the date, time, or scene number on the timecode track.
1. Set the DISPLAY switch to U-BIT.

2. Set the F-RUN/SET/R-RUN switch to SET.
   The first (leftmost) digit flashes.

3. Use the up and down arrow buttons to change values, and use the left and right arrow buttons to move the flashing digit. Repeat until all digits are set.
   To reset the user bit data to 00 00 00 00 Press the RESET/RETURN button.

4. Set the F-RUN/SET/R-RUN switch to F-RUN or R-RUN, corresponding to the desired operating mode for the timecode generator.
   The set user bit data will be recorded for both LTC and VITC.

   To store the user bit setting in memory
   The user bit setting (apart from the real time) is automatically retained in memory even when the power is turned off.

**Synchronizing the timecode**

You can synchronize the internal timecode generator of this camcorder with an external generator for the regeneration of an external timecode. You can also synchronize the timecode generators of other camcorders/VTRs with the internal generator of this camcorder.

**Connections for timecode synchronization**

Connect both the reference video signal and the external timecode as illustrated below.

**Example 1: Synchronizing with an external timecode**

![Diagram of timecode synchronization](image)

- Set GENLOCK to ON on the GENLOCK page of the MAINTENANCE menu, if GENLOCK is set to OFF.

   a) Set GENLOCK to ON on the GENLOCK page of the MAINTENANCE menu, if GENLOCK is set to OFF.
Example 2: Interconnecting a number of camcorders or timecode synchronization

To lock the timecode to an external source

1. Turn on the POWER switch.
2. Set the PRESET/REGEN/CLOCK switch to PRESET.
3. Set the F-RUN/SET/R-RUN switch to F-RUN.
4. Set the DISPLAY switch to TC.
5. Supply a timecode signal and a reference video signal complying with the SMPTE standard and in proper phase relationship, to the TC IN connector and to the GENLOCK IN connector, respectively.

---

To another camcorder to be synchronized

1. TEST OUT
2. TC OUT
3. TC IN
4. GENLOCK IN

a) Set GENLOCK to ON on the GENLOCK page of the MAINTENANCE menu, if GENLOCK is set to OFF.
This operation synchronizes the internal timecode generator with the external timecode. After about 10 seconds, you can disconnect the external timecode without losing the synchronization. However, there will be noise on the recorded image if you connect or disconnect the timecode signal during recording.

**Notes**

- When you finish the above procedure, the internal timecode is immediately synchronized with the external timecode and the counter display will show the value of the external timecode. However, wait for a few seconds until the sync generator stabilizes before recording.
- If the frequency of the reference video signal is not the same as the system frequency of the camcorder, the camera cannot be correctly genlocked. In such a case, the internal timecode is not correctly synchronized with the external timecode.
- When the GENLOCK ON/OFF item is set to OFF on the GENLOCK page of the MAINTENANCE menu, the timecode cannot be synchronized with the reference video signal. In this case, set the GENLOCK item to ON on the GENLOCK page of the MAINTENANCE menu.

**User bit settings during timecode synchronization**

When the timecode is synchronized, only the time data is synchronized with the external timecode value. Therefore, each camcorder can have its own user bit settings.

You can lock the users bits of this camcorder to the user bits of external timecode by setting EXT-LK UBIT in the TIMECODE page of the MAINTENANCE menu to EXT.

**To release the timecode synchronization**

First disconnect the external timecode, then set the F-RUN/SET/R-RUN switch to R-RUN.

**To change the power supply from the battery pack to an external power supply during timecode synchronization**

To maintain a continuous power supply, connect the external power supply to the DC IN connector before removing the battery pack. You may lose timecode synchronization if you remove the battery pack first.

**Camera synchronization during timecode synchronization**

During timecode synchronization, the camera is genlocked to the reference video signal input from the GENLOCK IN connector.
Handling Discs

Discs used for recording and playback

The following Professional Discs 1) can be used for recording and playback on this unit:
- PFD23A (capacity 23.3 GB)
- PFD50DLA (capacity 50.0 GB)

1) Professional Disc is a trademark of Sony Corporation.

Notes
- It is not possible to use the following discs for recording or playback on this unit:
  - Blu-ray Disc
  - Professional Disc for Data
- PFD50DLA discs can be used only by XDCAM devices with the DL mark (see the following illustration). They cannot be used by XDCAM devices without this mark.

Notes on handling

Handling
The Professional Disc is housed in a cartridge, and is designed to allow handling free of risk from dust or fingerprints. However, if the cartridge is subjected to a severe shock, for example by dropping it, this can result in damage or scratching of the disc. If the disc is scratched, it may be impossible to record video/audio, or to play back the content recorded on the disc. The discs should be handled and stored carefully.
- Do not touch the surface of the disc itself within the cartridge.
- Deliberately opening the shutter may cause damage.

- Do not disassemble the cartridge.
- The supplied adhesive labels are recommended for indexing discs. Apply the label in the correct position.

Storage
- Do not store discs where they may be subjected to direct sunlight, or in other places where the temperature or humidity is high.
- Do not leave cartridges where dust may be able to gain ingress.
- Store cartridges in their cases.

Care of the discs
- Remove dust and dirt on the outside of a cartridge using a soft dry cloth.
- If condensation forms, allow ample time to dry before use.

Write-protecting discs

To protect the content recorded on the disc from accidental erasure, move the Write Inhibit tab on the lower surface of the disc in the direction of the arrow, as shown in the following figure.

Write Inhibit tab settings

Lower surface of the disc
Write Inhibit tab

Recording enabled
Recording disabled
You can also write protect-individual clips. For details, see “Locking (write-protecting) clips” on page 119.

### Loading and unloading a disc

#### To load a disc

1. **Turn on the POWER switch.**

   ![POWER switch](image)

   The disc is loaded.

   **Note**

   If there is condensation inside the VDR section, the message “HUMID” appears in the status display on the color LCD. If this happens, wait until the indicator goes off before going on to step 2.

2. **Press the EJECT button.**

   This opens the lid of the disc compartment.

   ![EJECT button](image)

   **Note**

   To insert the disc correctly, make sure that the camcorder is in the upright position (the grip upside, the bottom downside).

3. **Insert the disc in the ▼ direction, and close the disc compartment lid manually.**

   ![Insert disc](image)

   ![Close lid](image)

   ![Eject disc](image)

   ![Close rubber cover](image)

#### To unload a disc

With the power supply on, press the EJECT button to open the disc compartment lid and eject the disc, then remove the disc. If you are not going to insert another disc, close the disc compartment lid.

**To unload a disc when the power supply is off**

If the battery is exhausted, it is not possible to remove the disc by pressing the EJECT button. In such cases, use the following emergency procedure to remove the disc manually.

1. **Turn off the POWER switch.**

2. **Carry out the operation shown in the following figure.**

   ① Open this rubber cover.

   ② Using a screwdriver or similar implement, slide the black metal plate visible inside, in the direction of the rear of the camcorder. The disc compartment lid opens. A red Phillips screw is visible inside the rubber cap.

   ③ Use a Phillips screwdriver to turn the screw counterclockwise (the direction shown on the rubber cap). This ejects the disc.

   ④ Close the rubber cover firmly.
You need not return the screw to its original position after taking out the disc. Turning on the power makes the disc compartment mechanism operable again.

**Note**
Do not touch the disc or try to forcibly remove it until it has been completely ejected.

### Formatting a disc

#### When using a new disc
An unused disc requires no formatting operation. The disc is automatically formatted so that it is ready to use when loaded into this unit.

#### To format a disc on which material is recorded

*See page 132 for details of formatting a disc.*

**Note**
When a recorded disc is formatted, all the data on the disc is erased. (Even locked clips *(see page 119)* are also erased.)

---

### Handling of discs when recording does not end normally (salvage function)

Recording processing does not end normally if, for example, the battery pack is removed during recording, or if the power cord is disconnected during recording. Because the file system is not updated, video and audio data recorded in real time is not recognized as files and clip contents recorded up to that point are lost.

However, this unit has a salvage function which can hold losses to the minimum by reconstructing clips on such discs. Note that no recorded clip contents are lost when the POWER switch is set to OFF and when battery exhaustion is detected, because the unit does not become powered off until after the end of recording processing.

#### Notes
- Do not disconnect the battery pack or power cord until recording processing has finished and the ACCESS indicator has gone out.
- This function salvages as much recorded material as possible after an unforeseen accident, but 100% restoration cannot be guaranteed.
- Even when this function is used, it is not possible to recover data from immediately before the interruption of recording. The amount of data lost is as follows.
  - **Quick salvage:** From 2 to 5 seconds of data before the interruption of recording.
  - **Full salvage:** From 3 to 6 seconds of data before the interruption of recording.
  (More data may be lost when the unit is subject to vibrations, when you switch frequently between recording and paused, and when you use functions such as Picture Cash.)

#### Quick salvage
When the unit is powered on again after a recording interruption due to a power interruption, with the disc still loaded in the unit, clips are reconstructed on the basis of backup data stored in nonvolatile memory and markers recorded on the disc. Processing time is about 5 seconds.

#### Full salvage
When recording on an XDCAM device is interrupted because of a power interruption, and a disc is manually ejected from that device with the
power off, clips are reconstructed on the basis of markers recorded on the disc when the disc is loaded in this unit. Therefore, processing takes longer than for a quick salvage (about 30 seconds, although it depends on the state of the disc). Proceed as follows to perform a full salvage.

1 Insert the disc on which recording did not end normally.
   The following salvage message appears.

   **SAVAGE**
   **TO RECORD ON THE DISC, IT IS NECESSARY TO EXECUTE SALVAGE.**
   **SAVAGE OK?**
   **YES ➔ NO**

2 Turn the MENU knob to move ➔ to “YES”, and press the MENU knob.
   Salvage processing starts, and the message “EXECUTING” appears.

   A results message appears when the processing finishes.
   - If the salvage succeeded, the message “COMPLETED” appears.
   - If the salvage failed, the message “INCOMPLETED” appears. Clips for which recording did not end normally are lost.

To exit without salvaging
Select NO in step 1 to exit without performing salvage processing.
However, the status of the disc does not change. Salvage is still required to recover the clips for which recording did not end normally. The salvage message will appear again when that disc is inserted again, or when the camcorder is powered on again.

Notes
- If salvage processing is not done, sections which were recorded normally can be played back, but no new recording can be done on the disc.
- Full salvage of discs recorded by this camcorder can be performed with the PDW-F1600, PDW-HD1500, PDW-F800, or PDW-700. Full salvage cannot be performed with any other XDCAM device. The following message may appear when you insert a disc that was not recorded normally. The “XXXX” in the message is a code for XDCAM devices that can salvage the disc. Refer to the table below and use one of the indicated devices to salvage the disc.

<table>
<thead>
<tr>
<th>Code (XXXX)</th>

</tbody>
</table>

   a) Does not appear on this unit.

To cancel the message and return to normal operation, exchange the disc for a usable disc and flick the CANCEL/PRST/ESCAPE switch to the ESCAPE side, or press the MENU knob.
This section describes the basic procedures for shooting and recording.

Before a shooting session, ensure that the camcorder is functioning properly.

For details, see “Testing the Camcorder before Shooting” on page 240.

Basic procedure for shooting: from power supply to disc loading

1. Attach a fully charged battery pack.  
   For details, see “Preparing a Power Supply” on page 33.

2. Set the POWER switch to ON.

3. Press the DISP SEL/EXPAND button to switch the LCD monitor to status display, and check that the following conditions are met.
   - The HUMID indicator is not showing.
     If it is, wait until it disappears.
   - The battery status indicator shows at least five segments (■).
     If it does not, replace the battery pack with a fully charged one.

4. Check that there are no obstructions such as cables near the disc compartment lid. Then press the EJECT button to open the disc compartment lid.

5. After checking that the disc is not write-protected (see page 71), load it and close the disc compartment lid.

Basic procedure for shooting: from adjusting the black balance and white balance to stopping recording

Switch settings

After turning on the power and loading a disc, set the switches and selectors as shown below and begin operation.

- DISPLAY: ON
- Iris: Automatic
- Zoom: Automatic
- OUTPUT/DCC: CAM, DCC: ON
- F-RUN/SET/R-RUN: F-RUN or R-RUN (set as needed)
- AUDIO SELECT CH-1/CH-2: AUTO
1 Flick the AUTO W/B BAL switch to BLK to adjust the black balance. 
For details of black balance adjustment, see page 54.

2 Select the CC filter and ND filter to match the lighting conditions, and adjust the white balance. 
For details, see “Adjusting the white balance” on page 55.

3 Aim the camera at the subject and adjust the focus and zoom.

4 If necessary, set the electronic shutter for an appropriate mode and speed. 
For details, see “Setting the Electronic Shutter” on page 59.

5 To start recording, press the REC START button or the VTR button on the lens.
If the recording start/stop function is assigned to one of the ASSIGN 1/3/4 switches, COLOR TEMP. button, or RET button on the lens, you can also use this switch. 
On how to assign functions to the ASSIGN switches, see page 204.

During recording, the REC indicator lights in the viewfinder. Perform zooming and focus control, if necessary.

**Note**
During recording (while the ACCESS indicator is lit) do not remove the battery pack. If you do, the internal processing for recording may not finish properly, which may cause the last few seconds of recording to be lost.

4 To stop recording, press the REC START button or the VTR button on the lens again. 
The REC indicator in the viewfinder goes off. 
The material recorded from step 5 to step 6 is saved as a single clip.

6 To check the last two seconds of the recording (recording review) 
If you press the RET button on the lens while recording is paused, the last two seconds of the recording is played back. If you hold down the RET button, a low-speed reverse search begins at a position two seconds before the recording end position. When you release the RET button, the reverse search stops and playback in the forward direction begins. After playback, the camcorder is ready to start recording again.
By assigning the same function as that of the RET button on the lens to the ASSIGN 1/3/4 switch or COLOR TEMP. button, you can use the switch in the same way as the lens RET button.
On how to assign functions to the ASSIGN switches, see page 204.

7 Repeat steps 5 and 6 as required for shooting. 
Each time you repeat steps 5 and 6, successive clips are recorded on the disc.
Notes

- It is not possible to record a clip shorter than 2 seconds. If you stop recording within 2 seconds of starting, this results in a 2-second clip.
  - If you stop recording and restart within 2 seconds of the original start, this creates a single continuous clip from the original start time.
- The maximum number of clips that can be recorded on a single disc is 300. If an attempt is made to record more than 300 clips, the error message “MAX # Clips” appears, even if there is free capacity on the disc.

Playback control buttons

During recording, the playback control buttons (EJECT, F REV, F FWD, NEXT, PREV, PLAY/PAUSE, STOP) have no effect.

Playing back the recorded clip

Normal playback
By pressing the PLAY/PAUSE button, you can review any length of recording on the viewfinder screen in black and white or in color on the LCD monitor. There are two other ways to review the recording.

Recording review: You can view the last two seconds of the recording on the viewfinder screen in black and white or in color on the LCD monitor.

Viewing color playback on a video monitor:
You can view the recording in color on a color video monitor without the need for any external adaptor.

You can also view playback video during a fast forward or reverse search.

For details about the switches and controls used to select the audio output signal and to adjust the audio level, see page 15 and page 22.

To freeze a picture during playback

The following operation can also be done from the RM-B170/B750 Remote Control Unit.

1. Press the PLAY/PAUSE button to start playback.
2. Press the PLAY/PAUSE button again at the instant when you want to freeze the picture.
   - The playback pauses and a frozen picture appears.
   - The timecode of the frozen frame is displayed in the counter display and the PLAY/PAUSE indicator now flashes (one flash/second).

To restart playback
Press the PLAY/PAUSE button once again.

Clip playback modes

You can set the clip playback mode to either of the following.

Continuous playback mode: The playback target is all of the clips on the disc (factory default setting)

Single clip playback mode: The playback target is the currently selected clip only

To select single clip playback mode
Set SINGLE CLIP MODE in the CAM CONFIG 1 page of the MAINTENANCE menu to “ON”.

Playback in single clip playback mode
Playback stops when it reaches the start or end of the clip. The next and preceding clips are not played, even if they exist on the disc. The available playback types include normal playback, and high-speed playback in the forward or reverse directions.
To move to another clip, press the PREV, NEXT, F REV + PREV, or F FWD + NEXT button, or perform a thumbnail search.

Disc playback start position

Although this unit uses optical discs, it is designed to offer the most convenient features of tape playback by VTRs. One of these is the playback start position, which works in the same way as with tape, as described below.

After playback stop
The unit stops at the position where the STOP button was pressed.
Press the PLAY/PAUSE button to resume playback at the stop position.

After recording
The unit stops at the position where recording ended.
To play back a clip, press the PREV button to move to the start frame of any clip, or press the F REV button to move to any position.

After disc insertion
The unit stops at the position of the disc when it was most recently ejected.
Press the PLAY/PAUSE button to resume playback at the most recent position. The playback position is saved to the disc when the disc is ejected, which allows playback to start at that position whenever it is loaded into any XDCAM player.

**Note**

The playback position is not recorded to the disc if the disc is write-protected.

---

**Deteriorating playback conditions**

Deteriorating playback may be due to the following causes.

- **Scratches and dust on the disc surface**
  This includes fingerprints, dust from the air, tar from cigarette smoke, and so on. Scratches and soiling which occur before recording are not a problem because they are registered in advance as defects, and recording avoids them. However, scratches and soiling which occur after recording can lead to deteriorating playback conditions.

- **Aging of disc recording layers**
  Over several decades, the recording layers of optical discs can age and cause deteriorating playback conditions.

- **Deteriorating laser diodes performance**
  The performance of the laser diodes used in optical heads can worsen with age, leading to deteriorating playback conditions.

Refer to the Maintenance Manual for an approximate guide to when it is time to replace optical heads.

---

**To prevent playback conditions from deteriorating**

Pay attention to the following points when handling discs.

- Do not open disc cartridges and touch discs directly with your hands.
- Do not store for long periods in locations which are dusty or exposed to air circulated by fans.
- Do not store for long periods under high temperatures or in locations exposed to direct sunlight.

---

**If playback conditions have deteriorated**

Read errors occur when playback conditions continue to deteriorate.

When a read error occurs, the message “DISC ERROR!” appears, the video freezes, and the audio output is suppressed.

If this happens, check the following points.

**Whether the disc displays the same playback condition on other XDCAM devices:** If so, the surface of the disc may be dirty or scratched, or the performance of the recording layers on the disc may have worsened due to age. Do not use discs with these symptoms.

**Whether every disc inserted into an XDCAM device displays the same playback conditions:** If so, the performance of the laser diodes may have deteriorated. Check the total optical output time.

---

**Deleting the recorded clip**

For details, see “Deleting clips” on page 120.

---

**Using the Freeze Mix function**

The Freeze Mix function allows you to display a freeze image over the current shooting video. For example, you can use this function to frame summer and winter shots of a landscape scene in exactly the same way, or to resume an interrupted shooting session with exactly the same framing.

To use the Freeze Mix function, you need to assign it to an ASSIGN 1/3/4 switch or to the COLOR TEMP. button.

For details, see “Assigning functions to ASSIGN switches” (page 204)

1. **Play the disc that contains the scene you want to use as the framing standard.**

2. **When the scene that you want appears, press the PLAY/PAUSE button to pause playback.**

3. **Press the button to which you have assigned the Freeze Mix function.**
   The playback screen changes to black and white, and a freeze image appears over the current shooting video.

To change the standard image

Use the PLAY/PAUSE button, the F REV and F FWD buttons and other controls to find another image, and repeat step 2.

4. **Align the framing of the playback image and the shooting video.**
5 Press the button to which you have assigned the Freeze Mix function once more.
The unit exits Freeze Mix mode.

6 Start recording.

**Note**
If you exchange discs before starting to record, be careful to keep the unit from moving.

---

**Advanced Operations for Shooting**

### Recording essence marks

Shot marks and other essence marks can be recorded on the disc. Recording essence marks for scenes containing important images and sounds enables quick access to the marked points. This increases editing efficiency.

#### To record a shot mark using the RET button on the lens

To make it possible to record shot marks using the RET button on the lens, carry out the following procedure.

(How to select an item in the menu screen: Turn the MENU knob to move ◁ to the desired item.)

1. Display the ESSENCE MARK page of the MAINTENANCE menu.

   ![Menu Screen Screenshot](image)

   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Select the essence mark to be recorded, and press the MENU knob to display “ON”.

3. Repeat the step 2, as necessary.

#### To record shot mark 1/2

When the camcorder is in recording or playback mode, operate the lens RET button as follows.

- **Shot mark 1**: Press the RET button once.
- **Shot mark 2**: Press the RET button twice in rapid succession.
“ShotMark1” or “ShotMark2” appears in the viewfinder screen for about one second near the timecode display.

If the SHOT MARK 1 or SHOT MARK 2 recording function has been assigned to one of the ASSIGN 1/3/4 switches or COLOR TEMP. button, you can also use that switch to record a SHOT MARK 1 or SHOT MARK 2 essence mark.

On how to assign functions to the ASSIGN switches, see page 204.

If you connect a Windows USB keyboard to the USB connector, you can record shot marks from Shot Mark0 up to Shot Mark9 by pressing the 0 to 9 keys on the numeric keypad.

### Setting clip flags with switches

You can set three types of clip flags (OK/NG/KEEP) during recording, immediately after recording, or during playback. Setting these flags in each clip that you record makes it easy for editors and other colleagues to find and select the clips they need.

You can use switches on the unit to set these flags. But before you can do so, you need to assign the corresponding flag functions to the ASSIGN 1/3/4 switches, the COLOR TEMP. button, or the RET button on the lens (see page 204).

**To set a clip flag**

During recording, immediately after recording, or during playback (including search and still picture playback), press the button to which the flag function has been assigned. Press the button once at the position where you want to set the flag.

The specified flag is set, and “*** ClpFlg” (***: OK, NG, or KEEP) appears near the timecode display in the viewfinder for about three seconds.

**To clear a clip flag**

During recording or playback, press the button to which the flag function has been assigned. Press the button twice in rapid succession.

The flag is cleared, and “ClpFlg DEL.” appears for about three seconds.

You can also set and clear clip flags from a GUI screen. For details, see “Setting clip flags” (page 119).

---

### Setting the thumbnail image at recording time

When you record a clip, you can specify which frame to use as the clip thumbnail image (see page 100).

(The factory default setting is to use the first frame in the clip as the thumbnail.)

For example, if all clips have the same image in their first frames, you can specify a frame a few seconds after the start of the clip, so that all thumbnails will not show the same image. (How to select an item in the menu screen: Turn the MENU knob to move ♦ to the desired item.)

1. Display the ESSENCE MARK page of the MAINTENANCE menu, and press the MENU knob.

   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Select INDEX PIC POS, and press the MENU knob.

3. Turn the MENU knob to select the desired time.

4. Press the MENU knob.

### Starting a shoot with a few seconds of pre-stored picture data (Picture Cache function)

The camcorder has a large capacity internal memory, in which you can cache the last few seconds (maximum 30 seconds) of captured video and audio, so that recording starts from a point just before you press the REC START button or the VTR button on the lens.

**Note**

Picture Cache settings cannot be made while this unit is in the following states.

* The Clip Continuous Rec function is enabled.
* The Live Logging function is set to Live View mode.

### Setting the Picture Cache mode/Picture Cache time

To record in Picture Cache mode, you need to turn on Picture Cache mode and set the picture...
data storage time (Picture Cache time) using the USER menu.
The Picture Cache time determines the number of seconds recorded from the Picture Cache, counting back from the time when you press the REC START button or the VTR button on the lens to start recording. However, the number of seconds actually recorded from the Picture Cache may be shorter immediately after the setting of the VDR SAVE/STBY switch is changed, and in the special situations explained in the following notes.

Notes

• Storage of images to memory begins after you select Picture Cache mode. If you begin recording immediately after selecting Picture Cache mode, images from before the selection will not be recorded.
• During playback, recording review or GUI screen operations, no data is saved to the Picture Cache memory. Thus it is not possible to use this function to rerecord the last few seconds of material from playback or recording review.

To set the Picture Cache mode/Picture Cache time
(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1  Display the REC FUNCTION page of the OPERATION menu.

```
?005REC FUNCTION TOP
 CACHE/INTVAL REC: OFF

  DISC EXCHG CACHE: OFF
  CLIP CONT REC: OFF
  LIVE LOGGING: OFF
```

For details on menu operations, see “Basic menu operations” on page 189.

2  Select CACHE REC, and turn the MENU knob to display CACHE.

3  Select CACHE REC TIME, and turn the MENU knob to display the desired Picture Cache time.

As you turn the MENU knob, the Picture Cache time changes as follows: 0-2s ↔ 2-4s ↔ 4-6s ↔ 6-8s ↔ 8-10s ↔ 18-20s ↔ 28-30s.

The Picture Cache mode settings once made continue to be effective until changed.
You can assign the Picture Cache on/off function to one of the ASSIGN 1/2/3/4 switches, COLOR TEMP, button, or RET button on the lens.

For details, see “Assigning functions to ASSIGN switches” on page 204.

Notes

• You can do a menu operation to change the Picture Cache time while the camcorder is in recording mode. However, the new setting takes effect only after the recording is finished.
• In Picture Cache mode, the internal timecode generator operating mode is always F-RUN regardless of the setting of the F-RUN/SET/R-RUN switch.

Camcorder operations in Picture Cache mode
The recording procedure in Picture Cache mode is basically the same as that for normal recording. However, note the following differences.
• When you record in Picture Cache mode, the picture you are shooting now is recorded to disc after the picture data stored in memory (equal to the Picture Cache time) is recorded to disc. For this reason, disc access may continue for a short time after you press the REC START button to stop recording. During this time, the playback control buttons are disabled, as in recording mode. Also, if you press the REC START button or the VTR button on the lens to restart recording during this time, a separate clip is recorded.
• When you press the REC START button or the VTR button on the lens to restart recording during disc access, the start point of the recorded clip may be later than the Picture Cache time, especially when there are a large number of clips recorded on the disc. In Picture Cache mode, you should avoid stop and start recording operations in quick succession.
• The time disc access stops after the REC START button is pressed equals the Picture Cache time. However, if you start recording within the Picture Cache time immediately after selecting Picture Cache mode, changing the Picture Cache time or performing playback or recording review, the picture data for the duration of the Picture Cache time will not be stored in memory. Thus, the time disc access stops after the STOP button is pressed becomes shorter than the Picture Cache time.
• In Picture Cache mode, you cannot set the F-RUN/SET/R-RUN switch to SET to make
timecode settings. To make timecode settings, first exit Picture Cache mode.

When power is lost during recording in Picture Cache mode
• If the POWER switch is turned off during recording in Picture Cache mode, the camcorder gets powered off after disc access has continued for a few seconds so that the picture at the moment when the POWER switch is turned off is recorded.
• If you remove the battery, pull out the DC cable, or cut power to the AC adaptor during recording in Picture Cache mode, video and audio stored in memory will be lost without being recorded to the disc. For this reason, make sure you do not replace the battery while recording.

---

**Time-lapse video (Interval Rec function)**

Using the memory in the camcorder, you can capture time-lapse video. There are two modes for this function, which is known as “Interval Rec”.

**Auto Interval Rec mode**: In Auto Interval Rec mode, pictures are automatically shot a frame at a time at the specified interval and stored in memory. To use this function, you must set the total time for shooting (TAKE TOTAL TIME) and the length of time for recording on the disc (REC TIME).

**Manual Interval Rec mode**: A specified number of frames (NUMBER OF FRAME) is recorded when you press the REC START button or the lens VTR button. There are two Manual Interval Rec modes: a single shot mode in which recording is done once with each press of the button, and a consecutive mode in which recording is done repeatedly at a specified interval after the button is pressed.

A pre-lighting function is available in Auto Interval Rec mode and the consecutive mode of Manual Interval Rec mode. This function automatically turns on the light before recording starts, which allows you to record pictures under stable light and color temperature conditions.

---

**Note**

Interval Rec settings cannot be made while this unit is in the following states.

---

**Operation limitations during recording**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>Audio signals</td>
<td>Not recorded.</td>
</tr>
<tr>
<td>Playback control buttons</td>
<td>• <strong>Auto Interval Rec mode and the consecutive mode of Manual Interval Rec mode</strong>&lt;br&gt;The EJECT, F REV, F FWD, NEXT, PREV, PLAY/PAUSE and STOP buttons are disabled. To use these buttons, stop recording by pressing the REC START button or the VTR button on the lens.</td>
</tr>
</tbody>
</table>

---

**Menu operations**

The settings of the Interval Rec-related items on the REC FUNCTION page of the OPERATION menu cannot be changed. To change the settings, do either of the following.

• **Auto Interval Rec mode and the consecutive mode of Manual Interval Rec mode**<br>Stop recording by pressing the REC START button or the VTR button on the lens.

• **The single shot mode of Manual Interval Rec mode**<br>Exit the Interval Rec mode by pressing the EJECT button.
Auto Interval Rec mode settings and shooting

**To make settings**

1. Display the REC FUNCTION page of the OPERATION menu.
   
   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Select CACHE/INTVAL REC, and turn the MENU knob to display “A.INT”.

3. Select TAKE TOTAL TIME, and turn the MENU knob to select the desired time for shooting.
   
   As you turn the MENU knob, the setting changes as follows: 5MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 5H ↔ 7H ↔ 10H ↔ 15H ↔ 20H ↔ 30H ↔ 40H ↔ 50H ↔ 70H ↔ 100H.
   
   Here MIN means minutes (5MIN is 5 minutes) and H means hours (1H is one hour).

4. Select REC TIME, and turn the MENU knob to select the desired time to be recorded on the disc.
   
   As you turn the MENU knob, the setting changes as follows: 5SEC ↔ 10SEC ↔ 15SEC ↔ 20SEC ↔ 30SEC ↔ 40SEC ↔ 50SEC ↔ 1MIN ↔ 2MIN ↔ 3MIN ↔ 4MIN ↔ 5MIN ↔ 7MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 5H ↔ 7H ↔ 10H ↔ 15H ↔ 20H ↔ 30H ↔ 40H ↔ 50H ↔ 70H ↔ 100H.
   
   Here SEC means seconds (5SEC is 5 seconds) and MIN means minutes (1MIN is one minute).
   
   You cannot set a REC TIME that is more than one thirtieth of TAKE TOTAL TIME. The setting value changes within the range that can be set.
   
   For example: When TAKE TOTAL TIME is set to 1H, the maximum value of REC TIME is 2MIN. (60 minutes divided by 30 gives 2 minutes.)

5. As required, select PRE-LIGHTING, and turn the MENU knob to select the lighting on-time before recording starts.
   
   As you turn the MENU knob, the setting changes as follows: OFF ↔ 2SEC ↔ 5SEC ↔ 1MIN ↔ 2MIN ↔ 3MIN ↔ 4MIN ↔ 5MIN ↔ 7MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 5H ↔ 7H ↔ 10H ↔ 15H ↔ 20H ↔ 30H ↔ 40H ↔ 50H ↔ 70H ↔ 100H.

   **Note**
   
   Set the LIGHT switch on the camcorder to AUTO to turn on the light before recording. The light switch must also be set to ON. With these settings, the light turns on and off automatically. However, the light remains on continuously if the off time is 5 seconds or less.
   
   When the LIGHT switch is set to MANUAL and the light switch is set to ON, the light remains on continuously. (The light does not turn on and off automatically.)

When the setting is completed, the message “AUTO INTERVAL **M**S” appears along the bottom of the viewfinder screen. “**M**S” indicates the shooting interval.

For example, the message “AUTO INTERVAL 00M04S” indicates that the shooting interval is four seconds.

The camcorder exits Auto Interval Rec mode whenever it is powered off. However, the TAKE TOTAL TIME, REC TIME, and PRE-LIGHTING settings are maintained. You do not need to set them again the next time you use Auto Interval Rec mode.

---

**Item** | **Description**
---|---
When the camcorder power is switched off | • When you set the POWER switch to OFF, the camcorder will switch off by itself after disc access has continued for a few seconds to record the picture data stored in memory.  
• If you remove the battery, unplug the DC cable, or cut power to the AC adaptor, picture data stored before recording stops (a maximum of ten seconds) may be lost. Take care when replacing the battery.

---

**Auto Interval Rec mode settings and shooting**

To make settings

1. Display the REC FUNCTION page of the OPERATION menu.
   
   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Select CACHE/INTVAL REC, and turn the MENU knob to display “A.INT”.

3. Select TAKE TOTAL TIME, and turn the MENU knob to select the desired time for shooting.
   
   As you turn the MENU knob, the setting changes as follows: 5MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 5H ↔ 7H ↔ 10H ↔ 15H ↔ 20H ↔ 30H ↔ 40H ↔ 50H ↔ 70H ↔ 100H.
   
   Here MIN means minutes (5MIN is 5 minutes) and H means hours (1H is one hour).

4. Select REC TIME, and turn the MENU knob to select the desired time to be recorded on the disc.
   
   As you turn the MENU knob, the setting changes as follows: 5SEC ↔ 10SEC ↔ 15SEC ↔ 20SEC ↔ 30SEC ↔ 40SEC ↔ 50SEC ↔ 1MIN ↔ 2MIN ↔ 3MIN ↔ 4MIN ↔ 5MIN ↔ 7MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 5H ↔ 7H ↔ 10H ↔ 15H ↔ 20H ↔ 30H ↔ 40H ↔ 50H ↔ 70H ↔ 100H.
   
   Here SEC means seconds (5SEC is 5 seconds) and MIN means minutes (1MIN is one minute).
   
   You cannot set a REC TIME that is more than one thirtieth of TAKE TOTAL TIME. The setting value changes within the range that can be set.
   
   For example: When TAKE TOTAL TIME is set to 1H, the maximum value of REC TIME is 2MIN. (60 minutes divided by 30 gives 2 minutes.)

5. As required, select PRE-LIGHTING, and turn the MENU knob to select the lighting on-time before recording starts.
   
   As you turn the MENU knob, the setting changes as follows: OFF ↔ 2SEC ↔ 5SEC ↔ 1MIN ↔ 2MIN ↔ 3MIN ↔ 4MIN ↔ 5MIN ↔ 7MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 5H ↔ 7H ↔ 10H ↔ 15H ↔ 20H ↔ 30H ↔ 40H ↔ 50H ↔ 70H ↔ 100H.

   **Note**
   
   Set the LIGHT switch on the camcorder to AUTO to turn on the light before recording. The light switch must also be set to ON. With these settings, the light turns on and off automatically. However, the light remains on continuously if the off time is 5 seconds or less.
   
   When the LIGHT switch is set to MANUAL and the light switch is set to ON, the light remains on continuously. (The light does not turn on and off automatically.)

When the setting is completed, the message “AUTO INTERVAL **M**S” appears along the bottom of the viewfinder screen. “**M**S” indicates the shooting interval.

For example, the message “AUTO INTERVAL 00M04S” indicates that the shooting interval is four seconds.

The camcorder exits Auto Interval Rec mode whenever it is powered off. However, the TAKE TOTAL TIME, REC TIME, and PRE-LIGHTING settings are maintained. You do not need to set them again the next time you use Auto Interval Rec mode.
To shoot and record

1. After performing the basic procedures for shooting and recording, following the instructions in “Basic Procedure for Shooting” (page 75), secure the camcorder so that it will not move.

2. Press the REC START button or the VTR button on the lens.
   
   The camcorder starts recording in Auto Interval Rec mode. When you use the PRE-LIGHTING function, recording starts after the light is switched on. The actual recording to disc begins when the camcorder has saved about ten seconds of video in memory, so disc access is intermittent. While recording in Auto Interval Rec mode, the TALLY (green tally) indicator in the viewfinder flashes (4 flashes/second) and the message “AUTO INTERVAL **M**S” flashes on the viewfinder screen.

   When the camcorder is capturing the picture in memory, the REC (recording, red tally) indicator in the viewfinder lights. After the length of time for recording on the disc (REC TIME) has elapsed, the camcorder automatically stops recording.

   To interrupt shooting
   Press the REC START button or the VTR button on the lens.
   Disc access may occur for recording picture data already stored in memory.

   To continue shooting
   Press the REC START button or the VTR button on the lens again.

   To exit Auto Interval Rec mode
   Do either of the following.
   - Set the POWER switch to OFF.
   - Set CACHE/INTVAL REC to OFF on the REC FUNCTION page of the OPERATION menu.

Time required for shooting and time required for recording on the disc

Auto Interval Rec mode is effective for shooting objects that move very slowly. To use this function, you need to set the total time for shooting (TAKE TOTAL TIME) and the length of time for recording on the disc (REC TIME). The time required for shooting is the time required to capture the very slowly moving subject, and the camcorder must be arranged so that during this time the subject is always in the frame.

The disc recording time indicates the running time of the completed recording. The camcorder calculates the time-lapse interval from these two times.

---

To make settings

1. Display the REC FUNCTION page of the OPERATION menu.
   
   For details on menu operations, see “Basic menu operations” on page 189.

2. Select CACHE/INTVAL REC, and turn the MENU knob to display “M.INT.”
As you turn the MENU knob, the setting changes as follows: OFF ↔ CACHE ↔ A.INT ↔ M.INT.

When M. INT appears, the camcorder is in Manual Interval Rec mode and the TALLY (green tally) indicator in the viewfinder flashes.

3. Select NUMBER OF FRAME, and turn the MENU knob to select the desired number of frames to be recorded in each shot.

As you turn the MENU knob, the setting changes as follows: 1 ↔ 3 ↔ 6.

4. Select TRIGGER INTERVAL, and turn the MENU knob to select the desired trigger mode or length of interval.

As you turn the MENU knob, the setting changes as follows: M ↔ 1SEC ↔ 2SEC ↔ 3SEC ↔ 4SEC ↔ 5SEC ↔ 6SEC ↔ 7SEC ↔ 8SEC ↔ 9SEC ↔ 10SEC ↔ 15SEC ↔ 20SEC ↔ 30SEC ↔ 40SEC ↔ 50SEC ↔ 1MIN ↔ 2MIN ↔ 3MIN ↔ 4MIN ↔ 5MIN ↔ 6MIN ↔ 7MIN ↔ 8MIN ↔ 9MIN ↔ 10MIN ↔ 15MIN ↔ 20MIN ↔ 30MIN ↔ 40MIN ↔ 50MIN ↔ 1H ↔ 2H ↔ 3H ↔ 4H ↔ 6H ↔ 12H ↔ 24H.

Here SEC means seconds (5SEC is 5 seconds) and MIN means minutes (1MIN is one minute).

M: The single shot mode (recording only one shot after one operation). In the viewfinder, the TALLY (green tally) indicator flashes twice per second.

A setting value other than “M”: The consecutive mode (recording shots repeatedly after one operation). In the viewfinder, the TALLY (green tally) indicator flashes four times per second.

5. When a setting value other than “M” (the consecutive mode) is selected in step 4, select PRE-LIGHTING, and turn the MENU knob to select the lighting on-time before recording starts as required.

As you turn the MENU knob, the setting changes as follows: OFF ↔ 2SEC ↔ 5SEC ↔ 10SEC.

Note

Set the LIGHT switch on the camcorder to AUTO to turn on the light before recording. The light switch must also be set to ON. With these settings, the light turns on and off automatically. However, the light remains on continuously if the off time is 5 seconds or less.

When the LIGHT switch is set to MANUAL and the light switch is set to ON, the light remains on continuously. (The light does not turn on and off automatically.)

When the setting is completed, the following message appears along the bottom of the viewfinder screen.

In single shot mode: MANU INTERVAL * FRAME

In consecutive mode: INTERVAL * SEC (MIN/H) * FRAME

“* SEC”, “* MIN”, and “* H” indicate the length of interval and “* FRAME” indicates the number of frames.

The camcorder exits Manual Interval Rec mode whenever it is powered off. However, the NUMBER OF FRAME, TRIGGER INTERVAL, and PRE-LIGHTING settings are maintained. You do not need to set them again the next time you use Manual Interval Rec mode.

To shoot and record

1. After performing the basic procedures for shooting and recording, following the instructions in “Basic Procedure for Shooting” (page 75), secure the camcorder so that it will not move.

2. Press the REC START button or the VTR button on the lens.

The camcorder starts recording in Manual Interval Rec mode. When you use the PRE-LIGHTING function, recording starts after the light is switched on.
While recording in Manual Interval Rec mode, the TALLY (green tally) indicator in the viewfinder flashes (2 or 4 flashes/second) and the message “MANU INTERVAL (* SEC) * FRAME” flashes on the viewfinder screen.

**To exit Manual Interval Rec mode**
Do one of the following.
- In the single shot mode, press the EJECT button.
- In the consecutive mode, press the REC START button or the lens VTR button to stop recording.
- Set the POWER switch to OFF.

After the camcorder has exited from Manual Interval Rec mode, it records picture data stored in memory to the disc.

---

**Exchanging discs while recording (Disc Exchange Cache function)**

Even if you run out of free disc capacity while recording, you can continue recording by using the Disc Exchange Cache function. This function enables seamless recording over extended recording sessions, too long to fit on one disc, by recording to the unit’s internal memory while you exchange the disc.

**Notes**
- Disc Exchange Cache settings cannot be made while this unit is in the following states.
  - The Interval Rec function is enabled.
  - The Clip Continuous Rec function is enabled.
  - The Live Logging function is set to Live View mode.
- The unit’s internal memory is not unlimited, so the video and audio may be interrupted if it takes too long to exchange the disc.

**To enable the Disc Exchange Cache function**

1. Display the REC FUNCTION page of the OPERATION menu.
   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Select DISC EXCHG CACHE, and turn the MENU knob to display “ON”. The TALLY (green tally) indicator lights in the viewfinder.

---

**To exchange discs with the function enabled**

When the disc exchange cache function is enabled, the following procedure allows you to exchange discs while continuing to record.

1. Press the REC START button or the VTR button on the lens to start recording.
   The REC (recording, red tally) indicator lights in the viewfinder, and the tally indicator lights.

2. Press the EJECT button with the unit still in the recording state.
   The REC (recording, red tally) indicator in the viewfinder and the tally indicator flash (once per second), and the disc is ejected.

   **If the message “DISC FULL!” appears**
   You can continue recording, because video and audio continue to be saved to internal memory. Press the EJECT button and continue to step 3.

   **Notes**
   - Do not stop recording before pressing the EJECT button. If you stop recording, the unit will stop storing video and audio in internal memory and this function will not work.

3. Quickly remove the disc, insert a formatted blank disc, and close the cover.
   When the disc is loaded, the REC (recording, red tally) indicator in the viewfinder and the tally indicator change to lit, and recording continues.

   **If the REC indicator and tally indicator begin flashing rapidly during the disc exchange**
   If the indicators change to flashing twice per second, that means that the unit’s internal memory is almost full. Complete the disc exchange quickly.

   **Notes**
   - If you insert a disc that cannot be recorded (such as a full disc or one with the Write Inhibit tab of the disc set to the recording disabled position), the unit ejects that disc as soon as it is recognized.
   - Recording may not start immediately if you insert an unformatted disc, or a disc that already
contains a large number of clips. As a result, the video and audio may be interrupted.

**Recording with the Clip Continuous Rec function**

Normally, a clip is created as an independent file each time that you start and stop recording. But this function allows you to start and stop recording while continuously recording to the same clip, for as long as the function remains enabled. This is convenient when you do not want to generate a large number of short clips, and when you want to record without worrying about exceeding the clip limit (up to 300 clips). It is still easy to find recording start points, because a Rec Start essence mark is recorded at the recording start point each time you start recording.

1. **Display the REC FUNCTION page in the OPERATION menu.**
   
   See “Basic menu operations” (page 189) for more information about menu operations.

2. **Select CLIP CONT REC and turn the MENU knob until ON appears.**
   
   “CONT” appears in the viewfinder, and the function is enabled.

You can assign the Clip Continuous Rec on/off function to one of the ASSIGN 1/2/3/4 switches, the COLOR TEMP. button, or the RET button on the lens.

*For details, see “Assigning functions to ASSIGN switches” on page 204.*

**Note**

Clip Continuous Rec settings cannot be made while this unit is in the following states:
- The Picture Cache function is enabled.
- The Interval Rec function is enabled.
- The Disc Exchange Cache function is enabled.
- The Live Logging function is set to Live View mode.

**To stop the function**

When the function is enabled, you can stop it by executing any of the following operations. (A new clip will be created when you next start recording.)
- Operate on a clip (lock, delete, or rename a clip)
- Establish a network or FAM connection
- Eject the disc
- Change the recording format

**To disable the function**

Set CLIP CONT REC in the REC FUNCTION page of the OPERATION menu to OFF.

**Retaking the most recent clip**

A retake function is available, making it easy to erase and retake the most recently recorded clip. To use the retake function, you need to assign it to one of the ASSIGN 1/3/4 switches or COLOR TEMP. button in advance.

*For details, see “Assigning functions to ASSIGN switches” on page 204.*

Example: After recording clip 3, you want to delete it and record a new clip 3 after clip 2.

<table>
<thead>
<tr>
<th>Clip 1</th>
<th>Clip 2</th>
<th>Clip 3</th>
<th>New clip</th>
</tr>
</thead>
</table>

**To retake the most recent clip**

With recording paused or after the end of a recording review (see page 76), proceed as follows.

1. **Hold down the button to which the retake function has been assigned.**
   
   While the button is held down, the last frame of the recorded clip and the message “PUSH RET FOR CLIP DELETE” appears.

2. **In this state, press the RET button.**
   
   The message “DELETING LAST CLIP” appears, and the processing for deleting the last recorded clip begins. When the deleting has finished, the message “LAST CLIP WAS DELETED” appears.

**Notes**

- The retake function cannot be used when the Clip Continuous Rec function is enabled.
- If an operation (other than recording review) which is not a retake operation is carried out after the last clip has been recorded, the retake function does not work even when the camcorder is in the recording pause state.

In this case, the message “RE-TAKE NOT ALLOWED!” appears. When you want to replace the last clip with a new clip, delete the clip (see page 120). Once you carry out a retake operation, the last clip is
deleted even if you do not carry out a recording operation afterwards.

Assigning user-defined clip titles automatically

About the automatic title generation function

By default, clips on each disc are assigned names in the range C0001.MXF to C9999.MXF. For this reason, two discs can contain clips with the same names. The automatic title generation function allows you to assign titles to all of the clips on several discs, which facilitates clip management. For example, if the titles TITLE00001 to TITLE00020 are assigned to clips C0001.MXF to C0020.MXF on disc 1, then the titles TITLE00021 to TITLE00037 are assigned to clips C0001.MXF to C0017.MXF on disc 2.

Titles are made up of prefixes, up to 10 characters in length, and five-digit serial numbers such as TITLE 00001.

Setting the title prefix

You can assign title prefixes by choosing from a prefix list stored in internal memory, or by entering the prefix directly.

However, to choose from a prefix list, you must create the list beforehand on a computer and transfer it to the unit’s internal memory with a “Memory Stick”.

Setting the initial value of the serial number

The initial value of the serial number can be set to 00001 (the default) or to any other number. The number is automatically incremented by 1 each time you record a clip. When it reaches 99999, it returns to 00001 for the next clip.

Note

Duplicate clip titles can be generated depending on the serial number setting, for example if you reset the serial number to the original value after recording several clips. Care should be taken when setting the serial number.

To assign user-defined titles automatically when clips are recorded

(How to select an item in the menu screen: Turn the MENU knob to move ↑ to the desired item.)

1. Display the CLIP TITLE page of the OPERATION menu.

2. Select “TITLE” and then press the MENU knob.

3. Turn the MENU knob to display “ENABL” and then press the MENU knob.

Clip titles will be generated automatically if you record in this state.
The title of the next clip to be recorded will be a combination of the prefix in the PREFIX field and the serial number in the NUMERIC field.

**To create a list of title prefix strings**

Prepare the data beforehand according to the following rules.

**File name**

Assign the name “TITLES.TXT” to the file.

**Input format**

Enter title prefixes one at a time, separated by newline (CRLF) characters. Prefixes can be up to 10 characters long. A prefix file can contain up to 20 prefixes.

**Allowable characters**

- Digits: 0 to 9
- Alphabetic characters: a to z, A to Z
- The following symbols: !, #, $, %, &, ', ( , ), ~, =, -, ^, @, [ , ], {, }, +, ; (semicolon), , (comma), . (period), _ (underscore)
- Space

**Title prefix list example**

Tennis<CRLF>
Basketball<CRLF>
Skiing_1<CRLF>
Skiing_2<CRLF>

**To transfer a title prefix list to the internal memory of the camcorder**

(How to select an item in the menu screen: Turn the MENU knob to move  to the desired item.)

1. **Copy the title prefix file (TITLES.TXT) to the following directory on the “Memory Stick”**.

   `\MSSONY\PRO\XDCAM\GENERAL\VAL_LIST`

   **Note**

   This directory is created when you insert a “Memory Stick” into the camcorder. Do not create this directory yourself on a computer.

2. **Insert a “Memory Stick” with the title prefix file (TITLES.TXT) into the “Memory Stick” slot of the camcorder.**

3. **On the CLIP TITLE page of the OPERATION menu (see page 156), select “LOAD PREFIX DATA” and then press the MENU knob.**

   “MEMORY STICK ACCESS” appears, and the file on the “Memory Stick” (TITLES.TXT) is transferred to the internal memory of the unit.

   The message “COMPLETE!” appears when the transfer finishes.

   **Note**

   The message “FILE NOT FOUND!” appears if no list of title prefixes is found. Check the location where the file is stored on the “Memory Stick”.

   **To select a prefix from the title prefix list**

   (How to select an item in the menu screen: Turn the MENU knob to move  to the desired item.)

   1. **Display the CLIP TITLE page of the OPERATION menu.**

      *For details on menu operations, see “Basic menu operations” on page 189.*

   2. **Select “SELECT PREFIX” and then press the MENU knob.**

      A list of up to 20 title prefixes appears.

      ![List of title prefixes](image)

      **Note**

      When no list of title prefixes has been transferred to the internal memory of this unit, only the initial value “TITLE” appears.

   3. **Select the desired title prefix from the list, and then press the MENU knob.**

      The CLIP TITLE page appears again, and the selected prefix appears in the PREFIX field.

   **To enter a title prefix directly**

   (How to select an item in the menu screen: Turn the MENU knob to move  to the desired item.)

   1. **Display the CLIP TITLE page on the OPERATION menu.**
2 Select “PREFIX” and then press the MENU knob.
   A prefix string appears.

3 Move ■ onto the character you want to change, and then press the MENU knob.

4 Turn the MENU knob to move ■ onto the desired character in the list of selectable characters, and then press the MENU knob.

5 Repeat steps 3 and 4 to enter the remaining characters.

6 When you have finished entering the prefix, turn the MENU knob to move ■ to “END” and then press the MENU knob.
   The camcorder exits prefix input mode, and the original CLIP TITLE page appears.

To set the initial value of the clip title serial number
You can set the initial value of the clip title serial number to 00001 (default) or to any 5-digit value.

To return the initial value to 00001
(How to select an item in the menu screen: Turn the MENU knob to move • to the desired item.)

1 Display the CLIP TITLE page on the OPERATION menu.
   For details on menu operations, see “Basic menu operations” on page 189.

2 Select “CLEAR NUMERIC” and then press the MENU knob.
   The message “CLEAR OK? • YES NO” appears.

3 Move ■ onto the digit you want to change, and then press the MENU knob.

4 Turn the MENU knob to move ■ onto the desired digit in the list of selectable digits, and then press the MENU knob.

5 Repeat steps 3 and 4 to enter the remaining digits.

6 When you have finished entering the value, turn the MENU knob to move ■ to “END” and then press the MENU knob.
   The camcorder exits numeric input mode, and the original CLIP TITLE page appears.

To check clip titles
Press the THUMBNAIL button to display the thumbnail screen, and select the clip whose title you want to check.
   The title of the selected clip appears in the upper left of the screen.
   See “Clip thumbnail screen” (page 102) for more information about the thumbnail screen.

Notes
- It is not possible to specify 00000 as the initial value. Even if you enter 00000, the value is reset to 00001 when the camcorder exits numeric input mode.
- The value of the serial number is incremented by 1 every time a title is generated. When the value reaches 99999, the next number restarts from 00001.
- Duplicate clip titles can be generated if you reset the serial number after recording several clips or the same is true depending on the value setting. Care should be taken when setting the serial number.
Assigning user-defined names to clips and clip lists

The following standard format names are assigned automatically to clips and clip lists that are created or recorded by XDCAM devices.

**Clips:** C0001.MXF to C9999.MXF  
**Clip lists:** E0001E01.SMI to E0099E01.SMI

When you record or create clips and clip lists, you can assign user-defined names instead of the standard format names. Assigning meaningful names to clips and clip lists can facilitate file management.

**Limitations**
- Letters, numbers and symbols from the Unicode 2.0 character set can be used. However, the following control characters and symbols cannot be used.
  - Control characters: U+0000 to U+001F, U+007F
  - Symbols: “, *, /, :, <, >, ?, \, |
- Depending on the character type, the length of name (“C*” part) may be limited to 14 characters. (The limit for ASCII characters is 56 characters.)
- All file name extensions are converted automatically to uppercase.
- Titles are used as user-defined clip names on this unit. Therefore, the available characters are limited to those supported by the title function.
- Files generated along with clips and clip lists are assigned the same names (the “C*” or “E*” part of the following file names).
  - Clips: Metadata files (C*M01.XML), user metadata files (C*M02.KLV), proxy AV data files (C*S01.MXF)
  - Clip lists: Metadata files (E*M01.XML)
- The following names cannot be assigned.
  - Clips: C0000.MXF
  - Clip lists: E0000E01.SMI, E0100E01.SMI to E9999E01.SMI, E0000.SMI, E0100.SMI to E9999.SMI
- The following names should be avoided.
  - Clips: C5000.MXF to C9999.MXF
  - Clip lists: E0001.SMI to E0099.SMI

**To assign clip names on this unit**

The title assigned to a clip is also used as the name of that clip (or the file name).

1. **Before starting,** set TITLE on the CLIP TITLE page of the OPERATION menu to ENABL and set a title (see page 88).  
   *For details on menu operations, see “Basic menu operations” on page 189.*

2. Display the FILE NAMING page of the OPERATION menu.

3. Select NAMING FORM and then press the MENU knob.

4. Turn the MENU knob to display “FREE” and then press the MENU knob.

You can now enter a user-defined name.
5 Turn the MENU knob to select “AUTO NAMING” and then press the MENU knob.

6 Turn the MENU knob to display “TITLE” and then press the MENU knob.

The same name will now be given to newly recorded clips.

Notes

- An FTP client software that supports UTF-8 is required to use Unicode characters other than ASCII characters. Command prompt FTP commands do not support UTF-8.
- When the first letter of the title setting on the CLIP AUTO TITLING menu is a space or period (.), the clip name is the title string minus the first letter.

To use clip names and clip list names by FAM and FTP

Carry out steps 2 to 4 of “To assign clip names on this unit” (page 91).

It is now possible to write, transfer, and rename clips and clip lists with user-defined names over file access mode (FAM) connections (see page 229) and FTP connections (see page 233).

Note

The item at the upper left of the screen is displayed according to the following order of priority.

Title > user-defined clip name > standard format clip name

Therefore, the display of this item changes as follows, depending on whether or not there is a title.

- When a title has been set as a clip name on this unit, the title is displayed for clips recorded on this unit.
- The user-defined name or standard format name is displayed for clips without a title.

To check clip information (name, title, etc.)

For details, see “Checking clip properties” (page 116).

Using planning metadata

Planning metadata is a file that contains metadata about the clips to be shot and recorded.

To use planning metadata, you need to load a planning metadata file into the unit’s memory before starting to shoot.

There are three ways to load files.

- Automatically load a file that has been written to the following directory on a Professional Disc via an FTP or FAM connection.
  
  If you do not want to load a file automatically, add a “load” property to the PlanningMetadata tag and set the value of the property to “false”, as shown in the shaded part of the following example.

  Example: <PlanningMetadata ...sp
  load="false"sp version="1.00"/>

- Use a GUI screen to load a file that has been written to the following directories on a Professional Disc or a USB flash drive (see page 129).

- Use a web browser to load a planning metadata file (see page 134). (You must install the CBKZ-UPG01 Software Upgrade Key.)

File creation rules

<table>
<thead>
<tr>
<th>File location</th>
<th>File name</th>
</tr>
</thead>
<tbody>
<tr>
<td>Professional Disc: General/Sony/ Planning directory a)</td>
<td>• Format that can be used in the General directory (see page 227) • Extension: XML</td>
</tr>
</tbody>
</table>
Chapter 4  Shooting

a) The General/Sony/Planning directory is generated automatically when you format a disc.

Note
Do not save more than 100 planning metadata files in the above save locations. The unit may fail to load the files correctly if more than 100 are saved.

For greater convenience in planning metadata operations, you can use the optional CBK-WA01 Wi-Fi adapter and the supplied Sony Planning Metadata Add-in application software. For details, refer to the operation manual of the CBK-WA01 Wi-Fi adapter.

To set clip names by using planning metadata

The following two types of clip name strings can be written in a planning metadata file.

- The ASCII format name that appears in the viewfinder 1)
- The UTF-8 format name that is actually registered as the clip name 2)

1) It is also possible to display the UTF-8 format name, or no name (see page 131).
2) When no UTF-8 format name string is specified, the ASCII format name string is registered as the actual clip name.

Clip name string format

In a text editor, modify the two fields in the <Title> tag that contain the clip name strings (the shaded fields in the example in the next section “Clip name string example”). Enter a name in the first field in ASCII format (up to 50 characters), and enter another name in the second field in UTF-8 format (up to 50 bytes).

Clip name string example

```xml
<?xml encoding="UTF-8" version="1.0"?>
<PlanningMetadata xmlns="http://xmlns.sony.net/pro/metadata/planningmetadata"
assignId="P0001"
creationDate="2008-01-20T17:00:00+09:00"
lastUpdate="2008-03-28T10:30:00+09:00"
version="1.00">
  <Properties propertyName="assignment"
    update="2008-01-20T09:00:00+09:00"
    modifiedBy="Chris">Typhoon_Strikes_Tokyo</Properties>
</PlanningMetadata>
```

In the above example,  indicates a space and  indicates a carriage return.

Notes
- When you create a file, enter each statement as a single line with a CRLF only after the last character in the statement line, and do not enter spaces except where specified.
- If the UTF-8 format string exceeds 50 bytes, the ASCII format string is used as the clip name string. If no ASCII format name is specified, the standard format clip name is used. When an ASCII format name string exceeds 50 characters, and when an UTF-8 format name string exceeds 50 bytes, the standard format clip name is used.

Setting clip names

1 Load a planning metadata file containing clip names into the unit’s memory (see page 129 and page 134).

2 Carry out steps 2 to 5 of “To assign clip names on this unit” (page 91).

3 Turn the MENU knob to display “PLAN”, and then press the MENU knob.

Each time that you start recording, the unit automatically creates clip names using the names specified in the planning metadata file. An underscore (_) and a five-digit serial number (00001 to 99999) is appended to each clip name.

Examples of automatically generated clip names

- Clip names displayed in the viewfinder: Typhoon_00001, Typhoon_00002, ...
- The actually recorded clip names: Typhoon_Strikes_Tokyo_00001, Typhoon_Strikes_Tokyo_00002, ...

1) When display of the ASCII format clip name has been selected (see page 131).

Notes
- The serial numbers return to 00001 on the next recording operation if you reach number 99999.
Serial numbers are not reset when you power the unit off or exchange discs (newly generated numbers are continuous on the old ones).

- If the ASCII format clip name string is longer than 14 characters, it is displayed in the viewfinder as the first 7 characters + (abbreviated) + the last 5 characters, for a total of 13 characters.

You can change the serial numbers by using Settings > Planning Clip Name Suffix in the Disc Menu (see page 107).

To specify user disc IDs by using planning metadata

You can use planning metadata to define user disc IDs which are saved in metadata files on XDCAM discs. To define a user disc ID, specify it as an ASCII or UTF-8 format disc name string in the planning metadata.

Notes
- A user disc ID is set only after the recording is finished.
- User disc IDs cannot be set to the disc where another user disc ID is already set. Use one of the following to change the user disc ID, or delete it before starting the operation described below.
  - Software keyboard screen (see page 129)
  - One of the (supplied) software applications

Disc name string format

Use a text editor to enter an ASCII string (up to 127 characters) or a UTF-8 string (up to about 42 multibyte characters) in the shaded part of the example in the next section, “Example of disc name specification”.

Example of disc name specification

```xml
<?xml version="1.0" encoding="UTF-8"?>
<PlanningMetadata
 xmlns="http://xmlns.sony.net/pro/metadata/planningmetadata"
 xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:schemaLocation="http://xmlns.sony.net/pro/metadata/planningmetadata http://xmlns.sony.net/pro/metadata/planningmetadata.xsd"
 assignId="H00123"
 creationDate="2009-09-10T08:00:00-05:00"
 lastUpdate="2009-09-10T13:43:52-05:00"
 version="1.00">
 <Properties propertyId="assignment" class="original" update="2009-09-10T15:00:00-05:00" modifiedBy="Chris">
  <Title usAscii="Football Game" xml:lang="ja">Football Game 10/09/2009</Title>
  <Meta name="MediaName">Football Game</Meta>
 </Properties>
</PlanningMetadata>
```

In this example, \( \text{sp} \) indicates a space and \( \text{nl} \) indicates a newline.

You can check user-specified disc name strings in the Disc Properties screen (see page 129), where they appear as the user disc ID.

Notes

When you create a planning metadata file, enter the specification as a single statement with newlines at the indicated newline positions only and spaces at the indicated space positions only (except for spaces in the disc name string).

To set essence mark names by using planning metadata

You can use planning metadata to specify user-defined names for the ShotMark0 to ShotMark 9 essence marks that correspond to the 0 to 9 keys on a USB keyboard. When planning metadata that contains user-defined essence mark name strings is loaded into this unit’s memory, the unit displays those names for the essence marks that correspond to the keys and that are recorded when the keys are pressed.

See page 79 for more information about recording essence marks, and see page 92 for more information about how to load files.

Essence mark name string format

Use a text editor to enter essence mark names in the sections indicated by shading in “Essence mark name string example”. Names can be either in ASCII format (up to 32 characters) or UTF-8 format (up to 16 characters).

Notes

If a name string contains even one non-ASCII character, the maximum length of that string is 16 characters.

Essence mark name string example

```xml
<?xml version="1.0" encoding="UTF-8"?>
<PlanningMetadata
 xmlns="http://xmlns.sony.net/pro/metadata/planningmetadata"
 xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
 xsi:schemaLocation="http://xmlns.sony.net/pro/metadata/planningmetadata http://xmlns.sony.net/pro/metadata/planningmetadata.xsd"
 assignId="H00123"
 creationDate="2009-04-15T08:00:00Z"
 lastUpdate="2009-04-15T15:00:00Z"
 version="1.00">
 <Properties propertyId="assignment" class="original" update="2009-04-15T15:00:00Z" modifiedBy="Chris">
  <Title usAscii="Football Game" xml:lang="ja">Football Game 15/04/2009</Title>
  <Meta name="MediaName">Football Game</Meta>
 </Properties>
</PlanningMetadata>
```
<Meta name="_ShotMark1"spcontent= "Goal"/>

<Meta name="_ShotMark2" spcontent="Shoot"/>

<Meta name="_ShotMark3"spcontent= "Corner Kick"/>

<Meta name="_ShotMark4"spcontent= "Free Kick"/>

<Meta name="_ShotMark5"spcontent= "Goal Kick"/>

<Meta name="_ShotMark6"spcontent= "Foul"/>

<Meta name="_ShotMark7"spcontent= "PK"/>

<Meta name="_ShotMark8"spcontent= "1st Half"/>

<Meta name="_ShotMark9"spcontent= "2nd Half"/>

<Meta name="_ShotMark0"spcontent= "Kick Off"/>

</Properties></PlanningMetadata>

In the above example, \( sp \) indicates a space and \( \rightarrow \) indicates a carriage return. You can check user-defined essence mark name strings in the User Defined Essence Marks screen (see page 131).

**Note**

When you create a definition file, enter each statement as a single line with a CRLF only after the last character in the statement line, and do not enter spaces except where specified, except within essence mark name strings.

**Recording video from external devices**

You can select between recording of data shot by the camera and recording of data input from an external device by using a menu or by using the ASSIGN 2 switch.

**Notes**

- If you want to use the ASSIGN 2 switch, you must assign the video switching function to the ASSIGN 2 switch beforehand (see page 204).
- Switching by the ASSIGN 2 switch takes priority over switching by the menu. (Switching by menu is not possible if the function has been assigned to the ASSIGN 2 switch.)
- Video breakup may occur around the switch if you switch the input during recording.

- Camera video is recorded if you switch to external input without inputting an external video signal to the SDI IN (OPTION) connector or the GENLOCK IN connector.
- It is not possible to record external input video with a changed aspect ratio.

**To record SDI signals (with the CBK-HD01 installed)**

When the optional CBK-HD01 HD/SD SDI Input Board is installed in this unit, you can record HD-SDI or SD-SDI signals input to the SDI IN (OPTION) connector. When an HD recording format (MPEG HD422 50, or MPEG HD420 HQ/SP) is selected, SD-SDI signals are upconverted to HD signals before recording.

**Notes**

- It is not possible to record HD-SDI signals when an SD recording format (MPEG IMX 50/40/30, or DVCAM) is selected.
- The system frequency and resolution (HD-SDI input only) of input signals must match the current settings of this unit. Otherwise the input signals cannot be recorded.
- Only audio signals embedded in SDI signals are recorded, regardless of the settings of the AUDIO IN CH-1/CH-2/CH-3/CH-4 switches.

1. **Display the SOURCE SEL page of the OPERATION menu.**

   | ?025OSOURCE SEL | TOP |
   | FRONT MIC SELECT: | ? STEREO |
   | REC VIDEO SOURCE: | CAM |
   | EXT VIDEO SOURCE: | HDSDI |
   | WIDE MODE (EXT): | AUTO |
   | SETUP REMOVE: | 7.5 |

   *For details on menu operations, see “Basic menu operations” on page 189.*

2. **Select REC VIDEO SOURCE, and turn the MENU knob to display “EXT”**.

3. **Select EXT VIDEO SOURCE, and turn the MENU knob to select the desired signal to be recorded.**

   As you turn the MENU knob, the setting changes as follows: HDSDI 1) \( \leftrightarrow \) SDSDI \( \leftrightarrow \) VBS 2).

1) HDSDI cannot be selected when an SD recording format is selected.
2) Does not appear when the optional CBK-SC02 Analog Composite Input Board is not installed.

After you complete this setting, you can record the video signals of external devices by inputting the SDI signals selected in step 3 to the SDI IN (OPTION) connector.

Recording analog composite signals (with the CBK-SC02 installed)

When the optional CBK-SC02 Analog Composite Input Board is installed in this unit, you can record analog composite signals input to the GENLOCK IN connector. When an HD recording format (MPEG HD422 50, or MPEG HD420 HQ/SP) is selected, analog composite signals are upconverted to HD signals before recording.

Note

Even if the GENLOCK item on the GENLOCK page of the MAINTENANCE menu is set to OFF, the unit automatically genlocks to external video signals that are input to the GENLOCK IN connector. When GENLOCK is set to OFF, the genlock is cancelled when the input of external video signals stops and the unit switches to camera shooting.

1) Display the SOURCE SEL page of the OPERATION menu.

2) Select REC VIDEO SOURCE, and turn the MENU knob to display “EXT”.

3) Select EXT VIDEO SOURCE, and turn the MENU knob to display “VBS”. 1)

1) Does not appear when the optional CBK-SC02 Analog Composite Input Board is not installed.

After you complete this setting, you can record external video signals by inputting analog composite signals to the GENLOCK IN connector.

Using the Live Logging function

The Live Logging function allows you to transfer proxy AV data to a computer as you are shooting, or to send and receive metadata between this unit and a computer. 1)

On this unit, you can transfer data via Ethernet or a wireless LAN. 2)

This function allows you to do the following on your computer.
- View proxy AV data
- Add and edit metadata (titles, comments, essence marks, and so on)
- Create clip lists

After adding or editing metadata, or creating a clip list, you can transfer the metadata or clip list from the computer back to this unit for recording on the original disc.

1) The CBKZ-UPG01 Software Upgrade Key must be installed to use the Live Logging function.
2) To make wireless LAN connections, you must install the optional CBK-WA01 Wi-Fi adapter and the CBKZ-UPG01 Software Upgrade Key.

See page 208 for more information about wireless LAN settings.

There are two Live Logging operating modes: Live mode and Live View mode. The following table lists the main functions provided by each operating mode.

<table>
<thead>
<tr>
<th>Operating mode</th>
<th>Main functions as seen from this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Live</td>
<td>• Send clip metadata&lt;br&gt;• Write edited clip metadata back to disc&lt;br&gt;• Receive planning metadata&lt;br&gt;• Receive clip lists</td>
</tr>
<tr>
<td>Live View</td>
<td>• Same functions as above&lt;br&gt;• Send proxy AV data</td>
</tr>
</tbody>
</table>

Notes

- The CBKZ-UPG01 Software Upgrade Key must be installed to use the Live Logging function.
- In Live View mode, it is not possible to set time data by setting the F-RUN/SET/R-RUN switch to SET. To set time data, first switch from Live View mode to another operating mode.
- Regardless of the setting of the F-RUN/SET/R-RUN switch, time data advances in F-RUN mode while the unit is operating in Live View mode.
- In Live View mode, it is not possible to set the PRESET/REGEN/CLOCK switch to REGEN and record timecode that is continuous with timecode read from the disc.
To record with the Live Logging function enabled

On the REC FUNCTION page of the OPERATION menu, set LIVE LOGGING to one of the following.
LIVE: Live mode
VIEW: Live view mode

Notes
- “LIVE LOGGING” does not appear in the REC FUNCTION page of the OPERATION menu unless the CBKZ-UPG01 Software Upgrade Key is installed.
- It is not possible to enable the Live Logging function while this unit is in the following state.
  - The proxy data recording function is enabled.
- It is not possible to set the Live Logging function to Live View mode while this unit is in the following states.
  - The Picture Cache function is enabled.
  - The Interval Rec function is enabled.
  - The Disc Exchange Cache function is enabled.
- The Live Logging function is disabled automatically whenever you enable the proxy data recording function.

Recording proxy data

You can connect a USB flash drive to the USB connector and use it to save proxy data. (Here, “proxy data” refers to proxy AV data for the clips on the disc as well as to metadata.) ¹)
You can then connect this USB flash drive to a computer to view the recorded proxy AV data, to edit and enter metadata (titles, comments, essence marks, and so on), and to create clip lists.

1) When recording of proxy data finishes, the planning metadata that has been loaded into this unit (if any) is also copied to the USB flash drive. The data is saved in the following directories, which are created automatically when a USB flash drive is mounted.
- Proxy AV data: \MSONY\PRO\XDCAM\MEMDISC\PROAVID\Sub
- Metadata: \MSONY\PRO\XDCAM\MEMDISC\PROAVID\Clip
- Planning metadata: \MSONY\PRO\XDCAM\MEMDISC\PROAVID\General\Sony\Planning

Notes
- USB flash drives must be formatted with the FAT32 file system. If a drive is formatted with any other file system, reformat it on this unit (see page 99).
- Never remove a USB flash drive or disconnect the battery pack or power cord while it is being accessed (while this unit’s ACCESS indicator is lit). Doing so can corrupt the data on the USB flash drive and make it unusable.

To enable proxy data recording and copying to USB flash drives

Before starting, set ETHERNET/USB in the POWER SAVE page of the OPERATION menu to “ENABL”.

1 In the OPERATION menu, display the MEMORY REC page.

See “Basic menu operations” (page 189) for more information about menu operations.

2 Select MEMORY REC, and turn the MENU knob until ENABL appears.

This enables proxy data recording and copying from discs to USB flash drives.

Notes
- It is not possible to make proxy data recording settings while this unit is in the following states.
  - Wireless LAN connections are enabled.
- The Live Logging function is disabled automatically whenever you enable the proxy data recording function.

To record proxy data while synchronizing with disc recording

1 Connect a USB flash drive to the USB connector.

2 Check the memory symbol and the memory remaining display (see page 30).

3 After confirming that the USB flash drive has enough free capacity, press the REC START button or the VTR button on the lens to start recording as normal. ¹)
The clip’s proxy data is written to the USB flash drive at the same time that the clip is recorded to the disc.

1) After the unit is powered on, some time is required for the memory symbol to appear. However, if the connected USB flash drive has enough free memory and recording is enabled, then recording of proxy data to the USB flash drive begins as soon as recording starts, even if the memory symbol has not yet appeared. The proxy data is the same data as the proxy data for clips that are recorded to the disc.

Notes

- If you start recording immediately after powering the unit on, and then stop recording after only a short time, the recording operation does not end until the unit has recognized the USB flash drive and recorded the proxy data to it. Note that if you enable this function and start recording without connecting a USB flash drive, recording will take longer because the unit will require more time to recognize that no flash drive is connected.
- The message “USB MEMORY INHIBIT!” or “USB M. INHIB!” appears if you connect and attempt to access a write protected USB flash drive. In this case, remove the USB flash drive, set it to enable recording, and connect it again.
- The message “MEM REC NG!” appears if you start recording without a USB flash drive connected. After recording stops, connect a USB flash drive, refer to “To copy the proxy data of a clip on a disc to a USB flash drive”, and copy the proxy data that could not be written to the USB flash drive during recording.
- It is not possible to record proxy data to a USB flash drive while the Clip Continuous Rec function is enabled. If you attempt to do so, the message “MEM REC NG!” appears and the data is not recorded. To record the proxy data, stop recording and copy the data to the USB flash drive as explained below in “To copy the proxy data of a clip on a disc to a USB flash drive”, and then resume shooting.
- Never disconnect the battery pack or power cord while recording to a USB flash drive (while the ACCESS indicator of this unit is lit). If you do so, recording processing will not end normally, and the clip proxy data that was recorded to the USB flash drive before the interruption will be lost.
- The message “MEM REC NG!” appears if the USB flash drive runs out of memory during recording (while the ACCESS indicator of this unit is lit), and the clip proxy data that was being recorded immediately before the message appeared is lost. If this occurs, exchange the USB flash drive, refer to “To copy the proxy data of a clip on a disc to a USB flash drive”, and copy the proxy data that could not be recorded.
- It is not possible to record proxy data to a USB flash drive only.

To stop recording

Recording to a USB flash drive stops whenever recording to the disc stops.

To stop recording to the USB flash drive only, set MEMORY REC on the MEMORY REC page of the OPERATION menu to “DSABL”.

To copy the proxy data of a clip on a disc to a USB flash drive

Proceed as follows to select an already recorded clip on a disc and copy its proxy data to a USB flash drive.

Note

The following functions stop during execution of a copy.
- Playback cue up
- Picture Cache recording

1 Search for the video of the clip (being played or stopped) that you want to copy.

2 Select COPY CURRENT CLP in the MEMORY REC page of the OPERATION menu, and then press the MENU knob.

   The message “EXECUTE OK?” appears.

3 Select “YES”, and then press the MENU knob.

   During the execution of the copy, the message “MEMORY ACCESS **%” appears in the viewfinder and on the LCD monitor, where “**%” is replaced with a number (0 to 99) that indicates the percentage completed. When processing finishes, the message “COMPLETE!” appears.

   The proxy data of the current clip (the currently stopped clip, or the one that being played) is copied to the USB flash drive.

To copy the proxy data of all clips on a disc to a USB flash drive

Proceed as follows to copy the proxy data of all clips on a disc to a USB flash drive.

Note

The following functions stop during execution of a copy.
- Playback cue up
- Picture Cache recording
1 Select COPY ALL CLIPS in the MEMORY REC page of the OPERATION menu, and then press the MENU knob.
The message “EXECUTE OK?” appears.

2 Select “YES”, and then press the MENU knob.
During the execution of the copy, the message “MEMORY ACCESS **%” appears in the viewfinder and on the LCD monitor, where “**” is replaced with a number (0 to 99) that indicates the percentage completed. When processing finishes, the message “COMPLETE!” appears.
The proxy data of all clips on the disc is copied to the USB flash drive.

Note
The message “M. Shortage” appears when the mount of data to be copied exceed the free capacity of the USB flash drive. The copy is not executed. Exchange the USB flash drive for one with enough free capacity.

To cancel a copy to a USB flash drive
1 Select ABORT COPY in the MEMORY REC page of the OPERATION menu, and then press the MENU knob.
The message “EXECUTE OK?” appears.

2 Select “YES”, and then press the MENU knob.
The message “ABORTING” appears in the viewfinder and on the LCD monitor while the unit is aborting the copy operation. The message “ABORT” appears when the abort processing is completed.

To delete recorded proxy data
To delete data recorded on the disc at the same time that you delete proxy data from a USB flash drive, execute the DELETE CLIP command in the Thumbnail menu (see page 120). To delete proxy data from the USB flash drive only, proceed as follows.

1 Select DELE ALL MEM CLP in the MEMORY REC page of the OPERATION menu, and then press the MENU knob.
Overview

You can perform scene searches, play the searched scenes, and select scenes (edit clip list) in Graphical User Interface (GUI) screens. The GUI screens are your gateways to discs and the data saved on discs.

(The GUI screens can display European languages, Japanese, Korean, Simplified Chinese, and Traditional Chinese for clip names and titles.)

Switching between GUI screens

The most important GUI screens are:

**Clip thumbnail screen:** Displays thumbnails of clips on the disc. “Clip” is displayed as the title at the upper left of the screen (see page 101).

**Clip list thumbnail screen:** Displays thumbnails of sub clips in a clip list. “Clip List” is displayed as the title at the upper left of the screen (see page 101).

There are also two playback screens:

**Clip playback screen:** Playback screen for normal video

**Clip list playback screen:** Playback screen for clip list video

You will use the THUMBNAIL/ESSENCE MARK button 1 and the SUB CLIP/DISC MENU button 2 to switch between these four screens. Each press of these buttons switches between the screens as shown in the following figure. The THUMBNAIL and SUB CLIP indicators light as follows, according to the type of screen that is currently displayed.

**Note**

To switch between these four screens, a disc with recorded clips must be loaded in the unit.
a) The playback screens appear when the LCD monitor is switched to display of video with (CHAR) or without (MONI) superimposed text. Press the DISP SEL/EXPAND button to switch the LCD monitor to these modes (see page 18).
b) The clip list playback screen appears when a clip list is loaded into the unit’s memory (see page 127).

The other thumbnail screens are:
- Expand thumbnail screen
- Chapter thumbnail screen
- Essence mark thumbnail screen
Information and controls in thumbnail screens

About the display of clip and clip list names

You can specify that titles should appear instead of names in the clip name areas of thumbnail screens. You can also change the display language.

To specify that titles (see page 91), if they exist, should be displayed with higher priority than names, select one of the following under Settings >Display Title in the Disc Menu.

**On: Title1 "title1":** Display in the order title1, title2, clip or clip list name.

**On: Title2 (title2):** Display in the order title2, title1, clip or clip list name.

To change the display language according to the area of use (see page 38), select the desired language under Settings >Select Font in the Disc Menu.

<table>
<thead>

Clip thumbnail screen

This screen displays thumbnails of clips on the disc in the order that they were recorded. You can use this screen to work with clips – deleting or locking them, selecting their index pictures, adding them to clip lists, and so on.

1. **Clip name**
   Displays the name or a title of the selected clip (see page 102).

2. **Selection frame**
   Indicates that the thumbnail is selected. To select another thumbnail, move the frame (see page 110). Multiple selection frames appear when multiple thumbnails are selected (see page 109).

3. **Clip number/total number of clips**
   Displays the total number of clips on the disc, and the number of the selected clip.

4. **Scrollbar**
   When not all of the thumbnails can be displayed in the thumbnail display area, the position of the slider shows the relative position of the currently displayed clips, and the length of the slider shows the relative length of currently displayed clips within all of the clips.
   When you have a large number of thumbnails, you can save time by using the Skip Scroll function to jump directly to the thumbnail you want (see page 110).

5. **Recording format**
   The recording format of the selected clip is displayed as a combination of the following information.
   - Video format logo
   - Number of system lines
   - Recording quality
   - Number of audio channels

6. **Clip date and time**
   Displays the date and time when the selected clip was shot and recorded.
7 Duration
Displays the duration (recording time) of the selected clip. When multiple clips are selected, displays the total recording time of the selected clips.

1 Thumbnail display items

1 Index picture
Displays an image to stand for the content of the clip. The index picture is normally the first frame of the clip.

2 Index picture changed mark
This mark, like the folded-over corner of a page that you want to remember, appears when the index picture has been changed to any frame other than the first frame of a clip (see page 115).

Note
When you cue up a clip, the unit always cues up the first frame, even when the index picture has been changed to a different frame.

3 S mark
This mark appears when shot marks or other essence marks have been set in the clip (see page 79). The chapter thumbnail screen can be displayed for clips that show this mark (see page 104).

4 Clip flag icon
Displays the corresponding icon when a clip flag (OK/NG/KP (KEEP)) is set in the clip (see page 119).

5 Clip and frame information
Displays the clip or frame information selected with the Clip Information item in the Thumbnail Menu (see page 115). The factory default selection is the timecode of the first frame or the timecode of the thumbnail frame.

6 Lock icon
This icon appears when the clip is locked (protected) (see page 119). Clips cannot be deleted and their clip information cannot be changed when this mark is displayed.

Clip list thumbnail screen
This screen displays thumbnails of the clips in the current clip list. You can use this screen to create and edit clip lists.

1 Clip list name
Displays the name or a title of the clip list (see page 102).

2 Selection frame
See the description in “Clip thumbnail screen” (page 102).

3 Sub clip number/number of sub clips
Displays the total number of sub clips in the clip list, and the number of the selected sub clip.

4 Scrollbar
See the description in “Clip thumbnail screen” (page 102).

5 Clip list date and time
Displays the date and time when the clip list was created, or the date and time of its most recent modification. An asterisk (*) appears after the date and time of creation when the current clip list has not been saved to the disc.
**Notes**

- “New File” appears when no clip list has been loaded into the unit’s memory, and when a clip list has been cleared from the unit’s memory.
- A mark appears before the date of creation or modification when a disc is write inhibited. You can create clip lists when the disc is write inhibited, but you cannot save them.

**Total duration**

Displays the total duration of all sub clips in the clip list.

**Expand thumbnail screen**

This screen displays thumbnails of equally sized divisions of the selected clip.

**Selection frame**

See the description in “Clip thumbnail screen” (page 102).

**Clip number/total clips x number of divisions**

Displays the number of the selected clip, the total number of clips on the disc, and the number of times that the selected clip has been divided to display the expansion thumbnails.

**Thumbnail number/total thumbnails**

Displays the total number of expanded thumbnails and the number of the selected thumbnail.

**Scrollbar**

See the description in “Clip thumbnail screen” (page 102).

**Clip name**

Displays the name or a title of the expanded clip (see page 102).

**Duration**

Displays the time from the selected thumbnail to the next one.

**Chapter thumbnail screen**

Chapters are the sections between the shot marks, Rec Start marks, and other essence marks that have been recorded in clips. This screen allows you to display thumbnails of the chapters in the selected clip.

**Note**

Shot marks can be set by the user during recording and playback. They can be deleted and moved. Essence marks other than shot marks are set automatically. They cannot be deleted or moved.

**Selection frame**

See the description in “Clip thumbnail screen” (page 102).

**Clip number/total clips**

Displays the total number of clips on the disc and the number of the clip that contains the displayed chapters.

If the essence mark name is a user-defined name, it is displayed between quotation marks, for example as [Chapter: “Touch Down”] (see page 131).

**S1/S2/RS marks**

The “S1”, “S2”, and “RS” marks on the thumbnails indicate frames where Shot Mark1, Shot Mark2, and Rec Start essence marks are set.
4 Chapter number/total chapters
Displays the total number of chapters and the number of the selected chapter.

Note
The total number of chapters is the total number of chapters in the specified clip only.

5 Scrollbar
See the description in “Clip thumbnail screen” (page 102).

6 Clip name
Displays the name or a title of the clip whose chapter is displayed (see page 102).

7 Duration
Displays the time from the first frame of the selected chapter to the first frame of the next chapter.

Essence mark thumbnail screen
This screen displays thumbnails of the specified essence mark, found by searching all clips on the disc.

1 Essence mark name
Displays the name of the essence mark (Shot Mark1 here). If the shot mark name has been defined by the user, it is enclosed in quotation marks (“ ”) in the display (see page 131).

2 Selection frame
See the description in “Clip thumbnail screen” (page 102).

3 Essence mark number/total essence marks
Displays the total number of essence marks and the number of the selected essence mark.

Note
The total number of essence marks is the total number of essence marks that have been set in all clips on the disc.

4 Scrollbar
See the description in “Clip thumbnail screen” (page 102).

5 Clip date and time
Displays the date and time when the clip that contains the selected thumbnail was recorded or last modified.

6 Clip name
Displays the name or a title of the clip that contains the selected frame (see page 102).

Displaying menus

Thumbnail Menu
The Thumbnail Menu displays menu items that are valid for the currently displayed thumbnail screen.

To display the Thumbnail Menu
To display the Thumbnail Menu, press the MENU button with a thumbnail screen displayed. To return to the original screen, press the MENU button again, or press the RESET/RETURN button.
a) Clip thumbnail screen
b) Thumbnail Menu of the clip thumbnail screen

Shortcut operations

Shortcut button names are displayed next to the menu items of commands that have shortcuts (see page 143).

Note

Shortcuts displayed within parentheses should be used with all menus closed.

Thumbnail Menu submenus

- The Thumbnail Search Menu contains the basic commands for thumbnail searches.
- The Thumbnail View Menu contains the basic commands for moving to other menus.
Disc Menu

The Disc Menu allows you to do the following.
(Underlined values in the Operation/Setting column are the factory defaults.)

<table>
<thead>
<tr>
<th>Item</th>
<th>Operation/Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Load Clip List</td>
<td>Load clip list into this unit’s memory.</td>

### To display the Disc Menu
To display the Disc Menu, press the SUB CLIP/DISC MENU button with the SHIFT button held down in one of the following screens.
- Clip thumbnail screen
- Clip list thumbnail screen
- Clip playback screen
To return to the original screen, press the RESET/RETURN button.
Chapter 5  Operations in GUI Screens

To select items

Do one of the following to select thumbnails, menu items, timecode digits, and other items.

- Turn the MENU knob.
- Press the up-, down-, left-, or right-arrow button.
- With the SHIFT button held down, press the PREV or NEXT button.
- With the SHIFT button held down, press the PREV button with the F REV button held down, or press the NEXT button with the F FWD button held down (to move to the first or last item).
- Press the PREV button with the F REV button held down, or press the NEXT button with the F FWD button held down (to move to the first or last item).
- With the SHIFT button held down, press the up- or down-arrow button (to move to the previous or next page).
- Press the F REV or F FWD button (to move to the previous or next page).

To select multiple thumbnails

Do one of the following.

- With the SHIFT button held down, turn the MENU knob.
- With the SHIFT button held down, press the left- or right-arrow button.
To return to the previous screen
Press the RESET/RETURN button.

To move from a menu level to the next lower or higher menu level
For a menu item displayed together with a ▶ or ◄ mark, you can move to the next lower or higher menu level by pressing the right- or left-arrow button.

To scroll hidden parts of the string into view
When a ▶ or ◄ mark is displayed for an item, you can press the left or right arrow button to scroll the display by one character for each press. The up and down arrow buttons scroll the beginning and end of the string into view.

To increment and decrement numbers
Do one of the following.
• Press the up- or down-arrow button.
• Turn the MENU knob.

To confirm selections
Press the SET/S.SEL button or the MENU knob.

You can use thumbnail screens to display clip information and to find, protect, and delete clips. The thumbnails provide visual confirmation of these and other operations.

Selecting thumbnails
The thumbnail selection frame (see page 102) indicates the currently selected thumbnail.

To move the thumbnail selection frame
Turn the MENU knob, or press the arrow buttons.

To skip quickly through thumbnails (Skip Scroll function)
When you have a large number of thumbnails, like in expand thumbnail screen, you can use the Skip Scroll function to skip through them quickly. See page 109 for more information about operations in thumbnail screens.

1 In the screens like clip thumbnail screen or expand thumbnail screen, display the Thumbnail Menu.

2 Select Skip Scroll, and then press the SET/S.SEL button or the MENU knob. A small popup window appears on the scrollbar to indicate the position of the currently selected thumbnail within the set of all thumbnails.
3 Turn the MENU knob, or press the up or down-arrow button.
The current position moves by an amount equal to \( \frac{1}{10} \) of the total number of thumbnails.

4 Press the SET/S.SEL button or the MENU knob at the new position.
The thumbnail at the position indicated in the small popup window appears in a thumbnail screen like the following 1).

1) Expand thumbnail screen

To select multiple thumbnails
Move the selection frame to the first thumbnail that you want to select. Then, with the SHIFT button held down, turn the MENU knob, or press the right-arrow button.
To cancel the multiple selection, move the selection frame without the SHIFT button held down.

Searching with thumbnails
By using the thumbnails that appear in the various thumbnail screens, you can easily cue up and play clips and sub clips.

Using thumbnails to find clips
The clip thumbnail screen displays thumbnails of all clips recorded on the disc. You can use this screen to cue up the selected clip and to carry out playback (see page 113).

See “Selecting thumbnails” (page 110) for more information.

Using the expand function to find scenes
The expand function allows you to divide a selected clip into equally sized blocks, and to display thumbnails of the first frame in each block. This is a quick and efficient way to review the selected clip and search for target scenes. You can specify 12, 144, or 1728 divisions.

Note
The maximum number of blocks may be other than 1728 when the recorded duration of the clip is short. In this case, the frame interval of expanded thumbnails is fixed at 1 frame. This allows you to view expanded thumbnails at equal intervals.

See page 109 for more information about thumbnail screen operations.

1 In the clip thumbnail screen, select the thumbnail of the clip that contains the scene you want to find.

2 Press the DISP SEL/EXPAND button.
The selected clip is divided into 12 blocks, and a list appears in the expand thumbnail screen (see page 104) with the first frame of each block displayed as a thumbnail.

3 Select the thumbnail that you want to expand further.

4 Repeat steps 2 and 3 up to twice, as required.

Note
Thumbnails cannot be further expanded when they already have the minimum duration (1 frame).

To return to the previous expansion level
Press the DISP SEL/EXPAND button with the SHIFT button held down.

To display the expand thumbnail screen of the previous or next clip
With the expand thumbnail screen still active, press the PREV button or the NEXT button.
Using the chapter function to find scenes

Chapters are the sections between the shot marks, Rec Start marks, and other essence marks. Rec Start essence marks are set automatically at the start of recording, but shot marks can be set at any scene during recording or playback. The chapter function allows you to display thumbnails of the chapters in a clip.

See “Recording essence marks” (page 79) for more information.

See page 109 for more information about thumbnail screen operations.

1 In the clip thumbnail screen, select the thumbnail of a clip with chapters set.
   The “S” mark appears on the thumbnails of clips with chapters set.

2 Press the HOLD/CHAPTER button.
   The chapter thumbnail screen (see page 104) appears, with thumbnails of the frames where chapters are set.
   The “S1”, “S2”, and “RS” marks on the thumbnails indicate frames where Shot Mark1, Shot Mark2, and Rec Start essence marks are set.

To delete the shot mark at a chapter position
You can delete the shot mark (Shot Mark0 to Shot Mark9) at the chapter position in the chapter thumbnail screen. (Rec Start essence marks cannot be deleted.)

1 In the chapter thumbnail screen, select the thumbnail for the frame whose shot mark you want to delete.

2 Display the Thumbnail Menu.

3 Select Delete Essence Mark.
   A message appears asking if you are sure that you want to delete the shot mark.

4 Select OK to delete the mark, or Cancel to cancel the deletion, and then press the SET/S.SEL button or the MENU knob.

To adjust the position of shot marks at chapter positions
You can use the chapter thumbnail screen to adjust the position of shot marks (Shot Mark0 to Shot Mark9) at chapter positions. (The positions of Rec Start essence marks cannot be adjusted.)

1 In the chapter thumbnail screen, select the thumbnail of the shot mark whose position you want to adjust.

2 Display the Thumbnail Menu.

3 Select Move Essence Mark.
   The Move Essence Mark screen is displayed.

   ![Move Essence Mark screen](image)

   You can perform playback and searches in this screen.

4 Use the PLAY/PAUSE button or F REV/F FWD buttons to display the frame you want.
   You can also perform jog playback by turning the MENU knob.

5 Select OK, and then press the SET/S.SEL button or the MENU knob.

To display the chapter thumbnail screen of the previous or next clip with chapters
With the chapter thumbnail screen still active, press the PREV button or the NEXT button. The unit searches in the reverse or forward direction for the next clip with chapters, beginning with the previous or next clip.

Using essence marks to find scenes

See page 109 for more information about thumbnail screen operations.

1 In the clip playback screen or the clip thumbnail screen, press the
THUMBNAIL/ESSENCE MARK button with the SHIFT button held down.
The Select Essence Mark screen appears. The names of essence marks that are not recorded on the disc are displayed in gray.

If planning metadata with user-defined essence mark has been loaded
You can select user-defined essence marks (see page 131).

2 Select the essence mark that you want, and then press the SET/S.SEL button or the MENU knob.
The essence mark thumbnail screen (see page 105) displays a list of frames where the selected essence mark is set.

To switch directly to the Rec Start essence mark thumbnail screen
Before starting, set FIND MODE in the ESSENCE MARK page of the MAINTENANCE menu to “R.ST”.
When the Rec Start essence mark thumbnail screen is displayed, each press of the THUMBNAIL/ESSENCE MARK button switches between that screen and the clip playback screen (Resume function). This setting allows you to use the THUMBNAIL/ESSENCE MARK button as a shortcut to Rec Start essence mark thumbnail screen, which is convenient for checking start points in clip recorded with the Clip Continuous Rec function.
To return to the clip thumbnail screen from the Rec Start essence mark thumbnail screen, press the RESET/RETURN button.

In the clip playback screen, the PREV and NEXT buttons jump to the previous or next recording start points.

Playing the scene you have found
After finding a clip with one of the methods explained in the previous section, “Searching with thumbnails” (page 111), you can cue up and play the clip that you have found.

To search for a thumbnail position and cue it up
See page 109 for more information about GUI screen operations.

1 Select the thumbnail that you want to cue up.

2 Press the SET/S.SEL button or the MENU knob.

To play clips with the SET/S.SEL button
In the Disc Menu, set Settings >SET Key on Thumbnail to “Cue up & Play”. Play begins from the selected frame when you press the SET/S.SEL button, in the same way as when you press the PLAY/PAUSE button.

To search for a thumbnail position and play from there
See page 109 for more information about GUI screen operations.

1 Select the thumbnail that you want to play.

2 Press the PLAY/PAUSE button.
Selecting clips by type (Filter Clips function)

You can select clips of a certain type from among all of the clips on a disc (Filter Clips function). For example, you can do the following.

- Select clips in a certain video format from a disc that contains clips in different video formats.
- Select clips that have been set “NG” as a clip flag, and delete all of those clips in one operation.
- Select only clips that have been recorded on the basis of a specified planning metadata entry, and transfer those clips to an external device using the Direct FTP function.

To filter clips

See page 109 for more information about thumbnail screen operations.

1 Display the clip thumbnail screen.

2 If you want to select clips by video format, select the thumbnails of clips in that format.

3 Display the Thumbnail menu.

4 Select “Filter Clips”, and then press the SET/S.SEL button or the MENU knob. The Filter Clips screen appears.

5 Select the clip filtering condition.

<table>
<thead>
<tr>
<th>Item name</th>
<th>Filtering condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clip Flag: OK</td>
<td>Clip flag set in the clip</td>
</tr>
<tr>
<td>Clip Flag: NG</td>
<td>(OK/NG/KP(KEEP)/none)</td>
</tr>
<tr>
<td>Clip Flag: KP(KEEP)</td>
<td></td>
</tr>
<tr>
<td>Clip Flag: none</td>
<td></td>
</tr>
<tr>
<td>Current Planning Metadata</td>
<td>Clips that have been recorded according to the instructions in the currently loaded planning metadata</td>
</tr>
<tr>
<td>AV Format of Selected Clip</td>
<td>Video format of the selected clips</td>
</tr>
</tbody>
</table>

6 Press the SET/S.SEL button or the MENU knob.

A filter thumbnail screen appears, showing only clips that meet the specified condition. The filtering condition appears at the lower left of the screen.

7 If you want to filter the clips again with a different filtering condition (to narrow down the filtering results), repeat steps 2 to 6. (The command name selected in step 4 changes to Filter Clips(Narrowing).)

To play selected clips continuously

Register all of the filtered clips in an automatically generated clip list, and play the clip list.

1 Display the Thumbnail Menu in the filter thumbnail screen.

2 Select “Copy to Clip List”, and then press the SET/S.SEL button or the MENU knob.

A clip list thumbnail screen appears, showing filtered clips that have been registered in the clip list.
3 Press the PLAY/PAUSE button.
The screen changes to the clip playback
screen, and playback starts.

Operations on filtering results
You can use the Thumbnail Menu in the filter
thumbnail screen to perform the following
operations.

<table>
<thead>
<tr>
<th>Item name</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clip Information</td>
<td>Select the information to be displayed at the bottom of the thumbnails.</td>
</tr>
<tr>
<td>Lock or Delete All Filtered Clips &gt; Lock All Filtered Clips</td>
<td>Lock all of the filtered clips.</td>
</tr>
<tr>
<td>Lock or Delete All Filtered Clips &gt; Unlock All Filtered Clips</td>
<td>Unlock all of the filtered clips.</td>
</tr>
<tr>
<td>Lock or Delete All Filtered Clips &gt; Delete All Filtered Clips</td>
<td>Delete all of the filtered clips.</td>
</tr>
<tr>
<td>Filter Clips(Narrowing)</td>
<td>Narrow down the filtering results.</td>
</tr>
<tr>
<td>Copy to Clip List</td>
<td>Copy all of the filtered clips to a new clip list.</td>
</tr>
<tr>
<td>Upload Clips via Direct FTP</td>
<td>Transfer all of the filtered clips to an external device via a network.</td>
</tr>
</tbody>
</table>

To display clip filtering conditions as Title2 titles
For clip lists created with the Copy to Clip List command, you can display the clip filtering conditions as Title2 titles.
When Settings > Display Title in the Disc Menu is set to “On: Title2 {title2}”, the clip filtering conditions are displayed automatically in screens such as the Load Clip List screen.

Selecting the information displayed on thumbnails
You can select the information to be displayed at the bottom of the thumbnails in thumbnail screens.
See page 109 for more information about thumbnail screen operations.

1 Display the Thumbnail Menu in the clip thumbnail screen.

2 Select Clip Information.
A window appears in which you can select the information to display.

3 Select the items that you want to display.
Return to Upper Menu: Returns to the Thumbnail Menu
Date: Date and time of creation, or date and time of the more recent modification
Time Code: Timecode of first frame
Duration: Playback time
Sequence Number: Thumbnail sequence number
The selected information will appear at the bottom of the thumbnails when you display a thumbnail screen.

Changing clip index pictures
The clip thumbnail screen displays thumbnails as index pictures for clips. Normally the index picture is the first frame in a clip, but you can set any frame in the clip as the index picture.

Note
You can only change index pictures from the clip thumbnail screen. The thumbnails shown in the clip list thumbnail screen, the expand thumbnail screen, and the chapter thumbnail screen cannot be changed.
To select a clip index picture while viewing the video

See page 109 for more information about thumbnail screen operations.

1 In the clip thumbnail screen, select the thumbnail of the clip whose index picture you want to change.

2 Display the Thumbnail Menu.

3 Select Select Index Picture.
Select Index screen appears.

You can play and search with this screen.

4 Use the PLAY/PAUSE button or F REV/F FWD buttons to display the frame you want.
You can also perform a jog operation by turning the MENU knob.

5 Press the up-arrow button to select OK, and then press the SET/S.SEL button or the MENU knob.

To select index pictures by using the expand and chapter functions

After using the expand function (see page 111) or chapter function (see page 112) to find a frame, you can set that frame as the index picture of the clip.
The following example explains how to do so from the expand thumbnail screen.
See page 109 for more information about thumbnail screen operations.

1 In the expand thumbnail screen, select the thumbnail to set as the index picture.

2 Display the Thumbnail Menu.

3 Select Set Index Picture.
A message appears asking you to confirm that you want to set the current frame as the index picture.

4 Select OK, and then press the SET/ S.SEL button or the MENU knob.
After pressing the RESET/RETURN knob to return to the clip thumbnail screen, check to make sure that the newly selected frame is displayed as the index picture.

Checking clip properties

You can check clip properties such as the title, timecode, duration, date and time of creation, and date and time of the more recent modification.

See page 109 for more information about thumbnail screen operations.

1 Display the Thumbnail Menu in the clip thumbnail screen.

2 Select Clip Properties.
The Clip Properties screen appears.

Clip No.: Clip number/total number of clips
Name: Clip name 1)
Title1: Title 1
Title2: Title 2 1)
AV Format: Recording format
Frame Rate: The frame rate when the clip was shot.
TC/DUR: Timecode of the first frame/Recording time
Created: Date and time of creation
To scroll hidden parts of the string into view
When a ▲ or ▼ mark is displayed for an item, you can press the left or right arrow button to scroll the display by one character for each press.
The up and down arrow buttons scroll the beginning and end of the string into view.

To display the properties of the previous or the next clip
Press the PREV button or the NEXT button.

To return to the clip thumbnail screen
Press the SET/S.SEL button or the MENU knob.

To edit clip information
You can edit the name, 1) title 1, and title 2 of a clip by using a software keyboard.

1) The NAMING FORM item on the FILE NAMING page of the OPERATION menu must be set to FREE (see page 156).

Notes
• The only characters that can be entered are the alphanumeric characters and symbols that appear on the software keyboard, and characters in the fonts supported by this version of the unit’s firmware. Japanese kanji cannot be entered.
• Names and titles must be within the specified character length limits.
• Some symbols cannot be used in clip names. The keys for those symbols are disabled when you are editing a clip name.

See page 109 for more information about GUI screen operations.

1 In the Clip Properties screen, turn the MENU knob to select the item you want to edit (Name, Title1 1), or Title2).
1) Only ASCII characters can be used for Title1.

2 Press the SET/S.SEL button or the MENU knob.
An input screen appears for the selected item.

(A keyboard appears that corresponds to the font selected with Disc Menu item Settings >Select Font if the area of use setting is NTSC AREA or PAL AREA. A Japanese keyboard appears if the area of use setting is NTSC(J)AREA.)

3 Edit the string in the edit box.

To enter characters
Use the arrow buttons or turn the MENU knob to select a key, and then press the SET/S.SEL button or the MENU knob.

Functions of special keys

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>← ,</td>
<td>Move the cursor one character forward or back.</td>
</tr>
<tr>
<td>↑ ,</td>
<td>Move the cursor to Home or End position.</td>
</tr>
<tr>
<td>Back Space</td>
<td>Deletes the character in front of the cursor.</td>
</tr>
<tr>
<td>CapsLock</td>
<td>Turns the Shift key on permanently (until pressed again), and enables input of capital letters and symbols.</td>
</tr>
<tr>
<td>◊Shift</td>
<td>Enables input of capital letters and symbols. Turns off after entry of one character.</td>
</tr>
</tbody>
</table>

4 Select OK, and then press the SET/S.SEL button or the MENU knob.
You return to the Clip Properties screen, and the results of the editing are reflected in the clip information.

To enter text using a USB keyboard or USB mouse
You can connect a Windows USB keyboard or a Windows USB mouse to the USB connector (see page 24), and use them together with the software keyboard to enter text. Connect a Japanese keyboard if the area of use has been set to NTSC(J)AREA.
Connect a keyboard that corresponds to the font selected with Disc Menu item Settings >Select Font...
Font if the area of use has been set to NTSC AREA or PAL AREA.
1) Some USB keyboards or USB mice may not be recognized. In this case, the message “Unknown USB” appears.
2) Only ASCII characters can be entered from a Japanese keyboard.

To change the display language (font) for clip names, clip list names, and title2 clip titles:
Select one of the following languages (fonts) with the Disc menu item Settings >Select Font.
- European Alphabet: The keyboard language can be selected with the Disc Menu item Settings >USB Keyboard Language (see following section).
- Korean: The Korean keyboard is selected automatically. You can enter Hangul characters if you have connected a Korean USB keyboard.
- Simplified Chinese: The keyboard layout is identical to that of the English [United States] keyboard. Only ASCII characters can be entered.
- Traditional Chinese: The keyboard layout is identical to that of the English [United States] keyboard. Only ASCII characters can be entered.

To change the keyboard language: In the Disc Menu, select Settings >Select USB Keyboard Language and then select the desired keyboard from among the following.
- English [United Kingdom]
- English [United States]
- French [France]
- German [Germany]
- Italian [Italy]
- Polish (Programmers) [Poland]
- Russian [Russia]
- Spanish [Spain]

Note
The keyboard language cannot be changed in the following cases.
- When the area of use is set to NTSC(J)AREA.
- When the area of use is set to NTSC AREA or PAL AREA, and the Disc Menu item Settings >Select Font is set to Korean, Simplified Chinese, or Traditional Chinese.

The keyboard icon on the software keyboard is highlighted when a USB keyboard has been recognized and enabled for use with this unit, and the mouse icon is highlighted and a mouse pointer appears when a USB mouse has been enabled.

Notes
- Use the proper keyboard for the area of use. Some characters may not be entered correctly if you use a keyboard designed for use in another area.
- It is not possible to enter Japanese, even on a Japanese keyboard.

USB keyboard special functions keys
In addition to the special function keys of the software keyboard, you can use the following special function keys on a USB keyboard.

<table>
<thead>
<tr>
<th>Key</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>↑, ↓</td>
<td>When the cursor is in an edit box: Move the cursor to the start or end. When “OK” or “Cancel” has the focus: Moves the focus between “OK” and “Cancel”.</td>
</tr>
<tr>
<td>Delete</td>
<td>Deletes the character after the cursor.</td>
</tr>
<tr>
<td>Shift + ←, →</td>
<td>Selects the character before or after the cursor.</td>
</tr>
<tr>
<td>Enter</td>
<td>When the cursor is in an edit box: Moves the focus to “OK”. When “OK” or “Cancel” has the focus: Exits the software keyboard.</td>
</tr>
<tr>
<td>Esc</td>
<td>When the cursor is in an edit box, moves the focus to “Cancel”.</td>
</tr>
<tr>
<td>Tab</td>
<td>Moves the focus between “OK” and “Cancel”.</td>
</tr>
</tbody>
</table>

USB mouse functions
You can use the mouse to move the cursor on the software keyboard. You can also left click on a key to enter the character for that key.

To change the speed of the mouse pointer: In the Disc Menu, select Settings >Select Mouse Pointer Speed and then select the...
desired speed. Adjust according to the selected mouse.

**To exit the software keyboard from a USB keyboard**

1. With the cursor in an edit box, press the Enter key to move the focus to “OK”.

2. Do one of the following.
   - **To confirm the edit and then exit the software keyboard:** While “OK” is selected, press the Enter key.
   - **To discard the edit and then exit the software keyboard:** On the USB keyboard, press the ▼ key or the Tab key to move to “Cancel”, and then press the Enter key.
   - **To continue editing:** Press any key except the Enter key, the Esc key, and the Tab key.

**Setting clip flags**

You can set three types of clip flags (OK/NG/KP (KEEP)) during recording or playback. Setting these flags in each clip that you record makes it easy for editors and other colleagues to find and select the clips they need.

See page 109 for more information about thumbnail screen operations.

1. In the clip thumbnail screen, select the thumbnail of the clip where you want to set a flag.

2. Display the Thumbnail Menu.

3. Select “Set Clip Flag”.
   The clip flag setting screen appears.

4. Select the clip flag that you want to set (OK/NG/KP (KEEP)).
   A clip flag icon (see page 103) appears for clips that have clip flags set.

**To clear clip flags**

Carry out steps 1 to 3, selecting a clip that has a flag set, and then select “none” in step 4.

You can also use switches to set and clear clip flags. For details, see “Setting clip flags with switches” (page 80).

**Locking (write-protecting) clips**

In a clip thumbnail screen, you can lock the selected clips so that they cannot be deleted or altered.

Locking prevents the following operations on clips.

- Deletion
- Renaming by FTP
- Changing the index picture
- Adding and deleting shot marks
- Setting and clearing clip flags

**Notes**

- Locked clips are deleted along with other clips when a disc is formatted.
- Clips cannot be locked or unlocked when the Write Inhibit tab of the disc is set to the recording disabled position.

**To lock clips**

See page 109 for more information about thumbnail screen operations.

1. In the clip thumbnail screen, select the thumbnails of the clips that you want to lock.

2. Display the Thumbnail Menu.

4. Press the SET/S.SEL button or the MENU knob.
   A lock icon (see page 103) appears on the thumbnail of the locked clips.

In step 1, you can also perform a shortcut operation by pressing the STOP button with the SHIFT button held down.

**To lock all clips**

1. Display the Disc Menu.
2 Select Lock or Delete All Clips, and then select Lock All Clips.
   A message appears asking you to confirm locking all clips.

3 Select OK to lock all clips or Cancel to cancel it, and then press the SET/S.SEL button or the MENU knob.

To unlock a specific clip
See page 109 for more information about thumbnail screen operations.

1 In the clip thumbnail screen, select the thumbnail of the clip that you want to unlock.

2 Display the Thumbnail Menu.

3 Select Lock/Unlock Clip.
   A message appears asking you to confirm the unlocking.

4 Select OK, and then press the SET/S.SEL button or the MENU knob.

In step 1, you can also perform a shortcut operation by pressing the STOP button with the SHIFT button held down.

To unlock all clips

1 Display the Disc Menu.

2 Select Lock or Delete All Clips, and then select Unlock All Clips.
   A message appears asking you to confirm that you want to unlock all clips.

3 Select OK to execute the unlock, or Cancel to cancel it, and then press the SET/S.SEL button or the MENU knob.

Deleting clips

You can delete clips while checking their contents.

Notes
- Clips cannot be deleted when the Write Inhibit tab of the disc is set to the recording disabled position.
- Locked clips cannot be deleted.
- If a deletion target clips is referenced by clip lists on the disc, all of those clip lists are deleted as well.
- If a deletion target clip is referenced in the current clip list, only those referencing sub clips are deleted at the same time as the deletion target clip.

See page 109 for more information about thumbnail screen operations.

1 In the clip thumbnail screen, select the thumbnail of the clip that you want to delete.

2 Display the Thumbnail Menu.

3 Select Delete Clip.
   A window appears asking you to confirm the deletion. The window displays thumbnails of four frames from the target clip (the first frame, two intermediate frames, and the last frame), along with the name, title 1, date of creation, and duration of the clip.
   One of the following messages also appears, depending on whether the clip is referenced in a clip list.
   When the clip is not referenced in a clip list: “Delete Clip”
   When the clip is referenced in a clip list: “Delete Clip & Clip List” (All clip lists that reference the target clip are deleted along with the clip.)

4 Select OK, and then press the SET/S.SEL button or the MENU knob.
   The selected clip is deleted, and you return to the clip thumbnail screen.
In step 1, you can also perform a shortcut operation by pressing the RESET/RETURN button with the SHIFT button held down.

**To delete all clips**

1. Display the Disc Menu.

2. Select Lock or Delete All Clips, and then select Delete All Clips.
   A message appears asking you to confirm that you want to delete all clips.

3. Select OK to execute the deletion, or Cancel to cancel it, and then press the SET/S.SEL button or the MENU knob.

**Note**

Locked clips cannot be deleted.

---

**Scene Selection (Clip List Editing)**

**What is scene selection?**

Scene selection is a function which allows you to select material (clips) from the material recorded on a disc and perform cut editing. You can do this by operating on this unit only.

- Scene selection is a convenient way to perform cut editing in the field and in other offline situations.
- In scene selection you create a clip list (editing data). Since the material itself is not affected, you can repeat this any number of times.
- You can play back the edit list created by scene selection on this unit.
- In scene selection you can add whole clips or add parts of a clip. You can add scenes using chapters, change the playback sequence, and amend or delete In and Out points. All of these operations can be carried out easily on this unit.
- Clip lists (editing data) created with the scene selection function can be used on XPRI and other full-feature nonlinear editing systems.

**Clips**

Material recorded with this unit is managed in units called clips. A clip contains the material from a recording start point to a recording end point.

Clips have numbers beginning with C, for example C0001.

---

You can also assign titles to your clips and use the titles to manage them, instead of the clip numbers. For more information, see “Assigning user-defined clip titles automatically” (page 88).
Clip lists

You can use the scene selection function to select clips from the clips saved on a disc and create a cut edit list called a “clip list”. Clip lists have numbers beginning with E, for example E0001. Up to 99 clip lists can be saved on a disc.

Sub clips (clips in clip lists)

Clips (or parts of clips) that have been added to a clip list are called “sub clips”. Sub clips are virtual editing data that specify ranges in the original clips. You can use them without modifying the original data. The following figure illustrates the relation between clips and sub clips.

In the above example, the whole of clip 2 has been added as sub clip 1, and the whole of clip 4 has been added as sub clip 2. Sub clip 3 is part of clip 3. Therefore, when clip list E0001 is played back, clip 4 is played after clip 2, and then the part of clip 3 shown in gray color is played.

Clip list editing (current clip list)

To edit a clip list, you need to load the clip list from the disc into the unit’s internal memory. The clip list which is currently loaded into the unit memory is called the “current clip list”. The current clip list is always the target of sub clip creation and editing. Clip list playback also uses the current clip list.

After creating and editing a clip list, you need to save it to disc.

Clip list playback

Clips and clip lists are saved together on a disc. To play a clip list, insert a disc into the unit, load the clip list that you want to play, and press the PLAY/PAUSE button. Clips are played according to the data in the clip list.

Creating and editing clip lists

The following table lists the steps in the creation and editing of clip lists with the scene selection function. To create a clip list, you always need to carry out the steps inside the heavy lines. Other steps can be carried out as required.
To reedit clip lists on the disc
Use the Load Clip List command to load the clip lists you want to edit, and perform the steps 2 to 4 in the previous section.

You can also delete clip lists on the disc.

For details, see “Managing clip lists” (page 127).

Note
Clip lists can be created and edited even when the Write Inhibit tab of the disc is set to recording disabled. However, if you need to save the clip list, set Write Inhibit tab to enable recording before you create or edit the clip list.

To add sub clips
You can add sub clips to clip lists from with the clip thumbnail screen or the clip list thumbnail screen. However, you must use the clip list thumbnail screen to edit clip lists.

Adding sub clips from the clip thumbnail screen
The following procedure explains operations in the clip thumbnail screen. You can proceed in the same way in the expand thumbnail screen and the chapter thumbnail screen. Expanded blocks are added as sub clips in the expand thumbnail screen, and chapters are added as sub clips in the chapter thumbnail screen.

See page 109 for more information about thumbnail screen operations.

1 In the clip thumbnail screen, select the clip that you want to add as a sub clip (multiple selections possible).

2 Display the Thumbnail Menu.

3 Select Add Sub Clips, and then press the SET/S.SEL button or the MENU knob.

The Add Sub Clip screen appears.
The clip(s) selected in step 1 appear in the upper part of this screen, and the clip list appears in the lower Scene Selection window. The I cursor in the Scene Selection window indicates the location where the currently selected sub clip(s) will be inserted.

4 Press the SET/S.SEL button or the MENU knob.
The selected clip is inserted as a subclip and a “+” mark appears on the thumbnail in the Scene Selection window.

To display the total duration after addition of the selected clip
Press the SHIFT button.

4 In the Scene Selection window, move the I cursor to the location where you want to insert the clip. (The existing thumbnails arrange themselves to the left and right of the I cursor.)

5 Press the SET/S.SEL button or the MENU knob.
The selected clip is inserted as a subclip and a “+” mark appears on the thumbnail in the Scene Selection window.

To check the addition results
Move the cursor.
6 Press the RESET/RETURN button.
This returns you to the clip thumbnail screen.

7 Repeat steps 1 to 6 as required to add more clips.

8 Save the clip list (see page 126).

In step 1, you can hold down the SHIFT button when you press the SET/S.SEL button. This is a shortcut that displays the Add Sub Clip screen immediately. You can also save the clip list immediately in step 5 by executing the Save Clip List command in the Disc Menu.

Adding sub clips from the clip list thumbnail screen
See page 109 for more information about thumbnail screen operations.

1 Display the Thumbnail Menu.

2 Select Add Sub Clips, and then press the SET/S.SEL button or the MENU knob.
The Clip List (Add) screen appears.

3 Select the sub clips that you want to add from the upper part of the screen (the part where 8 thumbnails are displayed, multiple selections possible).

To select from expanded thumbnails
Press the DISP SEL/EXPAND button to display the expand thumbnail screen.

To select from chapter thumbnails
Press the HOLD/CHAPTER button to display the chapter thumbnail screen.

4 Press the SET/S.SEL button or the MENU knob.
The thumbnail selection is confirmed, and an I cursor appears at the bottom of the Clip List (Add) screen (in the Scene Selection window). The I cursor indicates the location where the currently selected sub clips will be inserted.

To display the total duration after addition of the selected clips
Press the SHIFT button.

5 In the Scene Selection window, move the I cursor to the location where you want to insert the clip. (The existing thumbnails arrange themselves to the left and right of the I cursor.)

6 Press the SET/S.SEL button or the MENU knob.
The sub clips are added at the I cursor position, and you return to the clip list thumbnail screen.
You can check the results of the addition in that screen.

7 Repeat steps 1 to 6 as required to add more clips.

8 Save the clip list (see page 126).

In step 1, you can also perform a shortcut operation by pressing the SET/S.SEL button with the SHIFT button held down.

To reorder sub clips
See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, select the thumbnails of the sub clips that you want to move (multiple selections possible).

2 Display the Thumbnail Menu.

3 Select Move Sub Clips, and then press the SET/S.SEL button or the MENU knob.
The Clip List (Move) screen appears.
4 Move the I cursor to the point where you want to move the selected thumbnails.

5 Press the SET/S.SEL button or the MENU knob.
The sub clips are moved to the I cursor position.

6 Repeat steps 1 to 5 as required.

7 Save the clip list (see page 126).

To adjust the In and Out points of sub clips (trim)

Proceed as follows to define the range of a scene by changing the positions of the In and Out points.
See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, select a thumbnail.

2 Display the Thumbnail Menu.

3 Select Trim Sub Clip, and then press the SET/S.SEL button or the MENU knob.
The Clip List (Trim) screen appears.

Like the clip playback screen, this screen allows you to play and search all clips on the disc.

To display a list of In and Out point operations that you can perform
Press the MENU button.

4 When you find the point that you want to make the start point, select “IN” and then press the SET/S.SEL button or the MENU knob.
The timecode of the new In point appears in the timecode display, and the Total (total duration) and DUR (clip duration) displays are updated.

5 When you find the point that you want to make the end point, select “OUT” and then press the SET/S.SEL button or the MENU knob.
The timecode of the new Out point appears in the timecode display, and the Total (total duration) and DUR (clip duration) displays are updated.

To cue up the In point or Out point
Display the Thumbnail Menu, select Cue up Inpoint or Cue up Outpoint, and then press the SET/S.SEL button or the MENU knob.

To cancel the In point or Out point setting
Display the Thumbnail Menu, select Reset Inpoint or Reset Outpoint, and then press the SET/S.SEL button or the MENU knob.
The In point or Out point setting returns to the previous value.

6 Select OK, and then press the SET/S.SEL button or the MENU knob.

7 Repeat steps 1 to 6 as required.

8 Save the clip list (see page 126).

To delete sub clips

See page 109 for more information about thumbnail screen operations.

1 Select the clips to delete in the clip list thumbnail screen (multiple selections possible).

2 Display the Thumbnail Menu.

3 Select Delete Sub Clips, and then press the SET/S.SEL button or the MENU knob.
A message appears asking you to confirm the deletion.

4 Select OK, and then press the SET/S.SEL button or the MENU knob.

5 Repeat steps 1 to 4 as required.

6 Save the clip list (see page 126).
To play the clip list

Note
When this unit is in single clip playback mode (see page 77), only the selected sub clip can be played. See page 109 for more information about GUI screen operations.

To play using GUI screens

1 In the clip list thumbnail screen, select the thumbnail of the sub clip where you want to start play.
To start play from the start of the clip list
Select the thumbnail of the first sub clip.

2 Press the PLAY/PAUSE button.

To play using the clip list playback screen

1 Display the clip list playback screen.
2 Press the PREV button or the NEXT button to display the sub clip that you want to play.
To start play from the first sub clip
Press the SHIFT + PREV buttons to move to the start of the clip list.

3 Press the PLAY/PAUSE button.

To change the starting timecode of clip lists

The timecode of clip lists is continuous timecode, unrelated to the timecode of the original clips. By default the timecode (LTC) of the start of the clip list is 00:00:00:00, but it can be set to any value. See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, display the Thumbnail Menu.

2 Select Set Start Time Code, and then press the SET/S.SEL button or the MENU knob.
The Set Start Time Code screen appears.

3 Press the left- or right-arrow button to select the digit that you want to change.

4 Turn the MENU knob to change the value of the digit.

5 Repeat steps 3 and 4 as required.
To reset the timecode to 00:00:00:00
Select Reset to Zero in the Thumbnail Menu, and then press the SET/S.SEL button or the MENU knob.

To preset the frequently used timecode
Select Save Preset TC in the Thumbnail Menu, and then press the SET/S.SEL button or the MENU knob.
The timecode set in steps 3 and 4 is saved as a preset value.

To recall the preset timecode
Select Recall Preset TC in the Thumbnail Menu, and then press the SET/S.SEL button or the MENU knob.

6 Press the SET/S.SEL button or the MENU knob.
OK is selected.

7 Press the SET/S.SEL button or the MENU knob again.

8 Save the clip list (see page 126).

To save clip lists

To save under a specified name
See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, display the Disc Menu.

2 Select Save Clip List as..., and then press the SET/S.SEL button or the MENU knob.
A list of clip lists appears.

To switch the information displayed for clip lists
Press the right-arrow button.
With each press, the display changes in the order: “Name & Date” → “Name & Title” → “Name & Short Date” → ...

To sort clip lists
Select one of the following orders by selecting Settings > Sort Clip List By... in the Disc Menu.
Name(A-Z): Sort in ascending order by clip list name.
Date(Newest First): Sort by date and time of clip list creation, newest first.

3 Select the desired clip list name, and then press the SET/S.SEL button or the MENU knob.

To save under the same name
The following procedure saves the current clip list under its current name (the name that appears in the clip list thumbnail screen).
See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, display the Disc Menu (see page 108).

2 Select Save Clip List, and then press the SET/S.SEL button or the MENU knob.
The clip list is saved. However, Save Clip List as... is executed when the name displayed in the clip list thumbnail screen is “no name”.

Note
If you press the EJECT button before saving a new or edited clip list, a message appears asking if you want to discard your changes and continue. Follow the instructions in the message to continue or cancel the operation.

Managing clip lists

To load clip lists
The following procedure loads a clip list stored on the disc into the unit’s internal memory as the current clip list.
See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, display the Disc Menu.

2 Select Load Clip List, and then press the SET/S.SEL button or the MENU knob.
A list of clip lists stored on the disc appears.

3 Select the desired clip list, and then press the SET/S.SEL button or the MENU knob.

To create a new clip list
Select New File and then press the SET/S.SEL button or the MENU knob.

To clear clip lists
The following procedure clears the current clip list from the unit’s internal memory.
See page 109 for more information about thumbnail screen operations.

1 In the clip list thumbnail screen, display the Disc Menu.

2 Select Clear Clip List, and then press the SET/S.SEL button or the MENU knob.
A message appears asking you to confirm that you want to clear the clip list.
3 Select OK, and then press the SET/S.SEL button or the MENU knob.
The current clip list returns to the unnamed state “(no name)”.  

**To delete clip lists**

The following procedure deletes a clip list from the disc.  
*See page 109 for more information about thumbnail screen operations.*

1 In the clip list thumbnail screen, display the Disc Menu.

2 Select Delete Clip List, and then press the SET/S.SEL button or the MENU knob.  
A list of clip lists appears.

3 Select the clip list that you want to delete, and then press the SET/S.SEL button or the MENU knob.  
A message appears asking you to confirm the deletion.

4 Select OK, and then press the SET/S.SEL button or the MENU knob.

**To sort clip lists**

*See page 109 for more information about thumbnail screen operations.*

1 In the clip list thumbnail screen, display the Disc Menu.

2 Select Settings, and then press the SET/S.SEL button or the MENU knob.

3 Select Sort Clip List by..., and then press the SET/S.SEL button or the MENU knob.  
Clip lists will be displayed in the specified order the next time that you carry out an operation such as loading a clip list.

4 Select one of the following sort methods, and then press the SET/S.SEL button or the MENU knob.

- **Name(A-Z):** Sort in ascending order by clip list name.
- **Date(Newest First):** Sort by date and time of clip list creation, newest first.  
Clip lists will be displayed in the specified order the next time that you carry out an operation such as loading a clip list.
Disc Operations

Checking disc properties

See page 109 for more information about GUI screen operations.

1. Display the Disc Menu.
2. Select Disc Properties, and then press the SET/S.SEL button or the MENU knob.

The Disc Properties screen appears.

User Disc ID: User disc ID
Title1: Title 1
Title2: Title 2
Total DUR: Total recording time
Remain: Remaining recording time
Rewrite: Number of times rewritten

1) Titles can be displayed in European languages when the area of use (see page 38) is set to “NTSC AREA” or “PAL AREA”.

To scroll hidden parts of the string into view
When a ▶ or ◀ mark is displayed for an item, you can press the left or right arrow button to scroll the display by one character for each press.
The up and down arrow buttons scroll the beginning and end of the string into view.

To return to the previous screen
Press the SET/S.SEL button or the MENU knob.

To edit disc information
You can edit the user disc ID, title 1 1), and title 2 by using a software keyboard.
1) Only ASCII characters can be used for the title 1.

See “To edit clip information” (page 117) for information about operations.

Using planning metadata

Planning metadata is a file that contains metadata about the clips to be shot and recorded.
To use planning metadata, you will need to save a file in advance in the specified location of a media, and insert the media into this unit.
For details, see “To set clip names by using planning metadata” (page 93).

To load planning metadata files

See page 109 for more information about GUI screen operations.

1. Display the Disc Menu.
2. Select “Load Planning Metadata/Select Drive”, and then press the SET/S.SEL button or the MENU knob.

A media selection screen appears.

3. Select the media where your planning metadata file is stored, and then press the SET/S.SEL button or the MENU knob.

A list of the planning metadata files stored on the media appears.

Notes

- If MEMORY REC on the MEMORY REC page of the OPERATION menu is set to ENABL, it is not possible to load planning data from a USB flash drive that is write inhibited. Set MEMORY REC to DSABL before starting, or enable
recording on the USB flash drive and connect it again.

- If the message “USB M. INHI” appears when you connect a USB flash drive, disconnect the drive, enable recording on the USB flash drive, and then connect it again.
- Depending on the type of USB flash drive, data may not appear if you attempt to read planning metadata immediately after connecting the USB flash drive. In this case, connect the USB flash drive again, or exit the menu and try again. The data will then appear correctly.

4 Select the desired planning metadata file, and then press the SET/S.SEL button or the MENU knob.

The selected planning metadata file is loaded into the unit’s memory, and the Planning Metadata Properties screen appears.

5 Check the information that appears, and press the SET/S.SEL button or the MENU knob.

By connecting this unit and a computer over a network, you can read planning metadata using a web browser. For details, see “To use a web browser to load planning metadata” (page 134).

To sort planning metadata

You can sort planning metadata by operating in the same way as in “To sort clip lists” (page 128). However, in step 3, select “Sort Planning Metadata by...”.

The planning metadata will be displayed in the specified order the next time you load planning metadata.

To check planning metadata properties

You can check the properties of the planning metadata that is loaded into this unit’s memory, including the date and time of creation and the clip titles.

See page 109 for more information about GUI screen operations.

1 Display the Disc Menu.

2 Select “Planning Metadata Properties”, and then press the SET/S.SEL button or the MENU knob.

The Planning Metadata Properties screen appears.

File Name: Planning metadata file name
Assign ID: Assign ID
Created: Date and time of creation
Modified: Date and time of most recent modification
Modified by: Name of person who modified the file
Title1: Title 1
Title2: Title 2
Material Gp: Number of clips recorded with this planning metadata

1) This can be set as the clip name (see page 93).

To scroll hidden parts of the string into view

When a ▶ or ◄ mark is displayed for an item, you can press the left or right arrow button to scroll the display by one character for each press.

The up and down arrow buttons scroll the beginning and end of the string into view.

To return to the previous screen

Press the SET/S.SEL button or the MENU knob.

To change the serial numbers of clip names using planning metadata

You can change the serial numbers that are added to clip names that use planning metadata.

See page 109 for more information about GUI screen operations.

1 Display the Disc Menu.

2 Select Planning Clip Name Suffix (change the serial number added to clip names created by using planning metadata), and then press the SET/S.SEL button or MENU knob.

The Planning Clip Name Suffix screen appears.
3 Press the left- or right-arrow button to select a digit to change.

4 Press the up- or down-arrow button, or turn the MENU knob to change the digit.

5 Repeat steps 3 and 4 as required.

6 Press the SET/S.SEL button or the MENU knob.

7 Press the SET/S.SEL button or the MENU knob.

To clear planning metadata

See page 109 for more information about GUI screen operations.

1 Display the Disc Menu.

2 Select “Clear Planning Metadata”, and then press the SET/S.SEL button or the MENU knob.

A message appears asking you to confirm that you want to clear the planning metadata.

3 Select “OK”, and then press the SET/S.SEL button or the MENU knob.

The planning metadata is cleared from this unit’s memory.

To switch the title display in the LCD monitor and viewfinder

When planning metadata is loaded into this unit, you can select the format of the title to display in the LCD monitor and viewfinder.

See page 109 for more information about GUI screen operations.

1 Display the Disc Menu.

2 Select “Settings”, and then press the SET/S.SEL button or the MENU knob.

3 Select “Planning Clip Name in Clip Info. Area”, and then press the SET/S.SEL button or the MENU knob.

See page 29 for more information about the Clip Info. Area.

4 Select one of the following, and then press the SET/S.SEL button or the MENU knob.

ASCII Clip Name: Display the ASCII format title (see page 93).

Clip Name: Display the UTF-8 format title (see page 93).

---

To display clip names in the clip information area in the viewfinder

1 Display the Disc Menu.

2 Select “Settings”, and then press the SET/S.SEL button or the MENU knob.

3 Select “Planning Clip Name Display” (whether to display the clip name in the viewfinder screen), and then press the SET/S.SEL button or the MENU knob.

4 Select “Enable”, and then press the SET/S.SEL button or the MENU knob.

Clip information is always shown in the warning indicator area of the LCD monitor if the LCD monitor is set to status display.

Checking user-defined essence marks

You can display the names of user-defined Shot Mark0 to Shot Mark9 essence marks in planning metadata (UTF-8 format, maximum 32 bytes).

1 Display the Planning Metadata Properties screen (see page 130) for the planning metadata loaded into this unit.

The ➡ button is enabled when the planning metadata contains user-defined essence marks (see page 94).
2 Press ➔, and then turn the SET/S.SEL button or the MENU knob. The User Defined Essence Marks screen appears.

3 Select OK, and then press the SET/S.SEL button or the MENU knob.

To cancel the format
Select Cancel, and then press the SET/S.SEL button or the MENU knob.

To continue by formatting another disc
Exchange the disc, select OK, and then press the SET/S.SEL button or the MENU knob.

To exit the formatting screen
Press the SET/S.SEL button or the MENU knob with Exit selected.

To disable the Format Disc command
To prevent inadvertent disc formatting, resulting in the loss of recorded data, you can disable the Format Disc command. See page 109 for more information about GUI screen operations.

Displaying disc and clip properties in a web browser

By connecting this unit and a computer over a network, you can display disc properties and clip properties in a web browser installed on the computer (Web Thumbnail function). The Clip Properties page also allows you to download high-resolution clip data, proxy AV data, and metadata from this unit and to save that data on your computer. The Planning Metadata page allows you to load planning metadata directly into the memory of this unit. 1)

1) To load planning metadata, you must install the CBKZ-UPG01 Software Upgrade Key.

Recommended browsers

The following browsers are recommended.
• Internet Explorer 7 1)
• Internet Explorer 8 1)

1) This function may not work properly in 32-bit versions of Internet Explorer if you are using a 64-bit version of Microsoft Windows. You should use a 64-bit version of Internet Explorer with 64-bit versions of Windows.

To display the unit’s XDCAM web pages

1 Connect this unit and a computer to a network (see page 233).

2 Start the browser on the computer, and enter “http://IP_address_of_this_unit/” in the address bar of the browser, and then press the Enter key.

For example, if the IP address of this unit is “192.168.001.010”, enter “http://192.168.1.10/”.

Formatting discs

See page 109 for more information about GUI screen operations.
If the connection succeeds, you will be prompted to enter a user name and a password.

3 **Enter your user name and password, and then press the Enter key.**
The user name and password are set to the following when the unit is shipped from the factory.
- User name: admin
- Password: pdw-680

After the user name and password are verified, an XDCAM web page appears.

To display disc and clip properties

1 **Insert a disc into this unit, and put this unit into the following state.**
   - Recording, playback, search and other disc operations: Stopped
   - THUMBNAIL button: Off
   - Disc access by Lock or Delete All Clips, Format Disc, and so on in the Disc Menu: Stopped
   - Setting of CACHE/INTVAL REC on the REC FUNCTION page of the OPERATION menu: OFF
   - FAM or FTP connection for file operations: Disconnected, or logged out
   - Recording of video from external devices: Disabled
   - Connections between this unit and a computer by the Live Logging function: Disconnected
   - Setting of LIVE LOGGING on the REC FUNCTION page of the OPERATION menu: Values other than VIEW (OFF or LIVE)
   - MENU ON/OFF switch: OFF

2 **Display the XDCAM web pages in the browser of your computer (see the previous section).**

   To display disc properties
   Click “Disc Properties” in the Disc menu.
   The disc properties of this unit appear in the Disc Properties page.

   See “Checking disc properties” (page 129) for more information about the various properties.

   To display clip properties
   Click “Thumbnails” in the Disc menu.
   A page of thumbnails of clips on the disc appears. Each thumbnail page displays up to 12 thumbnails.
   Like the thumbnails in the unit’s GUI screens (see page 103), the thumbnails display several information items, including index picture changed marks, S marks, clip flag icons, and lock icons.

   When multiple pages exist, you can switch pages by clicking << (back five pages), < (back one page), > (forward one page), or >> (forward five pages).

   To display clip properties
   In the Thumbnails page, select a clip by clicking its thumbnail.
   The properties of that clip appear in the Clip Properties page.

   See “Checking clip properties” (page 116) for more information about the various properties.
To download high-resolution clip data (HIGH resolution file), proxy AV data (LOW resolution file), or metadata (Clip NRT metadata), click the FTP Download or HTTP Download button to the right of the item that you want. Then click “Save” in the dialog that appears and specify the save destination. The specified data is downloaded to the specified location in your computer.

**FTP download limitations**
The following limitations apply to FTP download operations. They do not apply to HTTP download operations.

- The characters that can be used in the names of clip-related data files are single-byte letters, numbers, and symbols. However, the following symbols cannot be used.
  " # * / : < > ? \ /
- If you click “Cancel” in the download dialog, or if the download is cancelled in some other way with the browser still connected to the unit by FTP, click “Back to Thumbnails” to return to the thumbnails screen, or exit the web browser.

**To use a web browser to load planning metadata**

1. **Insert a disc into this unit, and put this unit into the following state.**
   - Recording, playback, search and other disc operations: Stopped
   - THUMBNAIL button: Off

2. **Display the Planning Metadata page of the XDCAM web pages in the web browser of your computer.**
   To display the Planning Metadata page, proceed in the same way as described in “To display the unit’s XDCAM web pages” (page 132). However, in step 2 enter “http://IP_address_of_this_unit/mobile.htm” in the address bar.

3. **Click “Browse...” to open the “Choose File” dialog.**

4. **Select the planning metadata file (XML) you saved on your computer, and then click “Open”.**
   The path of the selected file appears in the “File to send” field.

5. **Click “Execute”.**
   The planning metadata is loaded into the unit’s memory and stored in the /General/Sony/Planning directory on the disc. “OK” appears in the “Status” field when the transfer is complete.
Note

To load planning metadata, you must install the CBKZ-UPG01 Software Upgrade Key.
You can transfer clips (MXF files) between this unit and external devices over a network. This unit has an Direct FTP function, which allows you to connect to any XDCAM device or computer with an FTP server function and transfer files with a few simple operations in the GUI screen.

The following table lists the types of file transfers that this unit can execute.

<table>
<thead>
<tr>
<th>Transfer direction</th>
<th>Transfer target</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Upload</td>
<td>One or more clips</td>
<td>put</td>
</tr>
<tr>
<td></td>
<td>Multiple clips with clip list</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Part of one clip</td>
<td>partial put</td>
</tr>
<tr>
<td>Download</td>
<td>One clip</td>
<td>get</td>
</tr>
</tbody>
</table>

Note

File transfers with this function are limited to clips (high-resolution data) and clip list files. To transfer files of other types (proxy AV data, files in the General and User Data directories, and so on), operate after establishing a FAM or FTP connection (see page 223).

a) The following software requirements must be satisfied.
   - An FTP server function must be available.
   - In the case of Windows, Microsoft Window IIS (Internet Information Service) Version 7.0 or higher.
   - In the case of Macintosh, Mac OS X Version 10.5.6 or higher.
Preparations for clip transfers

Check the following points.
- This unit and the target transfer device (XDCAM device or computer) must be supplied with stable power and must be connected to a network.
- The settings under the NETWORK 1 page of the MAINTENANCE menu must be set to values that allow network connections.
- The ETHERNET/USB item on the POWER SAVE page of the OPERATION menu must be set to ENABL.
- For XDCAM devices that support UPnP (universal plug and play), the UPnP function must be enabled (the setting may vary).

To enable the UPnP function

The UPnP (universal plug and play) function allows devices to be easily connected to networks. The following XDCAM devices support UPnP.
- PDW-F1600
- PDW-HD1500
- PDW-HR1
- PDW-F800
- PDW-700
- PDW-680

To enable the UPnP function on this unit, set UPnP on the NETWORK SETTING page of the MAINTENANCE menu to ENABLE, and then power the unit off and on again.

For the settings on other XDCAM devices, refer to the operation manuals supplied with the devices.

Uploading clips

To upload entire clips

Proceed as follows to upload selected clips or all clips and clip lists on the disc.

See page 109 for more information about thumbnail screen operations.

1. In the clip thumbnail screen, select the clip to upload (multiple selections possible).
   To upload all clips and clip lists on the disc, start from step 2.

2. Display the Thumbnail Menu.

3. Select Upload Clips via Direct FTP, and then press the SET/S.SEL button or the MENU knob.
   The Select Transfer Type screen of the Upload Clips via Direct FTP command appears.

4. Select the type of clip transfer.
   Selected Clips: Clips selected in step 1.
   All Clips & ClipList: All clips and clip lists on the disc.

   To transfer while preserving the UMID of the transfer source clips
   Check the “UMID Unchanged” option.

   Note
   If the remote host is a computer, clips are transferred with the UMID unchanged regardless of this setting.

   To reconnect to a remote host
   The Reconnect button is enabled if the most recent operation successfully established a connection to a remote host.
   You can select “Reconnect” and press the SET/S.SEL button or MENU knob to reconnect to that host. The host is selected automatically and the screen changes directly to the Connecting Status screen (see step 9 in the procedure).

   Note
   The Reconnect button is not enabled if the most recent operation failed to connect to a remote host.

5. Select ➔, and then press the SET/S.SEL button or the MENU knob.
   The Select Remote Host screen appears.
Select the remote host (the target device to which you want to transfer the clips). You can register up to four remote hosts.

**Remote Host 1 to 3:** Register these in the settings screen.

**Remote Host 4 (UPnP):** A remote host that supports UPnP (universal plug and play) is detected and registered automatically (see “To enable the UPnP function” (page 137)).

**To check remote hosts discovered by the UPnP function**
Select “Hosts Discovered via UPnP”, and then press the SET/S.SEL button or the MENU knob. (If the UPnP function of this unit is disabled, a confirmation screen appears prompting you to enable it. Select “OK” and then press the SET/S.SEL button or the MENU knob. The UPnP function will be enabled when you power the unit off and then on again.)
The Select Host Discovered via UPnP screen appears. (Some time may be required before the search for remote hosts finishes.)
Select the name of a remote host from the list, and press the SET/S.SEL button or the MENU knob. A network settings screen appears (see step 7). If you establish a connection with the selected remote host, the network settings are saved in Remote Host 4. From the next time that you select “Remote Host 4 (UPnP)”, the remote host that you select here will be connected.

**To check the network settings of this unit**
Select “Network Config”, and then press the SET/S.SEL button or the MENU knob. The following network settings appear.

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host Name</td>
<td>Host name</td>
</tr>
<tr>
<td>IP Address</td>
<td>IP address (^{a)})</td>
</tr>
<tr>
<td>Subnet Mask</td>
<td>Subnet mask</td>
</tr>
<tr>
<td>DHCP</td>
<td>Setting that specifies whether to acquire the IP address automatically from a DHCP server</td>
</tr>
<tr>
<td></td>
<td><strong>Enabled:</strong> Acquire automatically</td>
</tr>
<tr>
<td></td>
<td><strong>Disabled:</strong> Do not acquire automatically</td>
</tr>
<tr>
<td>Address Status</td>
<td>Method used to set IP address</td>
</tr>
<tr>
<td></td>
<td><strong>Manual Set:</strong> Manually</td>
</tr>
<tr>
<td></td>
<td><strong>DHCP:</strong> DHCP function</td>
</tr>
<tr>
<td></td>
<td><strong>AutoIP:</strong> Auto IP addressing function</td>
</tr>
<tr>
<td></td>
<td><strong>Undefined:</strong> Nothing specified</td>
</tr>
<tr>
<td>Default Gateway</td>
<td>Default gateway</td>
</tr>
</tbody>
</table>

\(^{a)}\) An IP address determined by a DHCP server appears instantly in this field.

Select OK and press the SET/S.SEL button or the MENU knob to return to the previous screen.

**Select \(\rightarrow\), and then press the SET/S.SEL button or the MENU knob.**
A network settings screen for the remote host appears.

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host Name</td>
<td>Host name or IP address. (If this is a host name, a DNS server must be available on the connected network. Specification of an IP address is recommended.)</td>
</tr>
<tr>
<td>Port</td>
<td>Port used by the FTP server (normally “21”).</td>
</tr>
</tbody>
</table>
a) If an XDCAM device is selected as the Device Type, then the User Name and Password are set automatically to the default, and you do not need to make the Port and Path settings. Simply selecting the Host Name (or as appropriate the Description) is enough to fulfill the requirements for connection.

If the User Name or Password of the device that you want to connect to changes, set them here.

8 Set the various items.

To select an item
Turn the MENU knob to move the cursor, and then push the SET/S.SEL button or the MENU knob.
A software keyboard appears so that you can enter a setting.

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Device Type</td>
<td>The type of the remote host</td>
</tr>
<tr>
<td></td>
<td>• If the remote host is an XDCAM device, select the model name or “Other XDCAM model” (if the model name is not in the list) from the list of model names. a)</td>
</tr>
<tr>
<td></td>
<td>• If the remote host is a computer, select “Others(PC Server)” from the list of model names.</td>
</tr>
<tr>
<td>Description</td>
<td>Comment about the remote host. (UTF-8 encoding, up to 127 bytes. This setting has no effect on the connection.) The setting that you make here appears as the remote host name in the Select Remote Host screen <em>(see step 5 of the procedure)</em>.</td>
</tr>
<tr>
<td>Path</td>
<td>If the remote host is a computer, path to the transfer destination directory. (This is not needed if the remote host is an XDCAM device.)</td>
</tr>
<tr>
<td>User Name</td>
<td>User name for FTP login. (If the remote host is an XDCAM device, the default is “admin”.)</td>
</tr>
<tr>
<td>Password</td>
<td>Password for FTP login. (If the remote host is an XDCAM device, the default is the model name, such as “pdw-680”.)</td>
</tr>
</tbody>
</table>

a) If an XDCAM device is selected as the Device Type, then the User Name and Password are set automatically to the default, and you do not need to make the Port and Path settings. Simply selecting the Host Name (or as appropriate the Description) is enough to fulfill the requirements for connection.

9 Select “Connect”, and then press the SET/S.SEL button or the MENU knob. The settings are saved and the Connecting Status screen appears.

The following table lists the various stages that appear in the connection status screen and describes the corresponding processing.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DNS Name Resolving</td>
<td>When host was specified by a host name instead of an IP address, the unit is querying a DNS server for the host’s IP address.</td>
</tr>
<tr>
<td>ping - echo back</td>
<td>The unit has issued a ping (communications established) command and is waiting for a response.</td>
</tr>
<tr>
<td>Open Remote Host</td>
<td>The unit is connecting to the remote host over the specified port.</td>
</tr>
<tr>
<td>FTP Login</td>
<td>The unit is logging in to the remote host with specified user name and password.</td>
</tr>
<tr>
<td>Change Directory</td>
<td>When a path was specified, the unit is changing to the specified directory.</td>
</tr>
</tbody>
</table>

The status indicated beside each item lights in yellow during processing for that item, and lights in green when the processing finishes.

If an error occurs
The status indicator changes to red. Correct the condition that caused the error and repeat the operation.

If you cannot connect
Check the following points.
• Make sure that this unit and the remote host are correctly connected to the network.
• If the remote host is an XDCAM device, make sure that it is not displaying a GUI screen.
• If the remote host is an XDCAM device, make sure that a disc is inserted.
When the connection is complete (the indicators of all items have turned green), the Upload Clips via Direct FTP screen appears.

**To check the connection on the remote host side**
If the remote host is an XDCAM device, check that the “NETWORK!” has appeared in the display or other status display location.

The progress bars show the progress of the transfer. If multiple clips are being transferred, a count of the clips that have been successfully transferred appears.

If the remote host is an XDCAM device, the disc usage also appears. (It does not appear if the remote host is a computer).

**If a file of the same name already exists at the transfer destination**
The file name is changed so that it does not conflict with the file at the destination. The name of the file on the transfer source (this unit) appears in the “Original” field, and the name of the file on the transfer destination appears in the “Copy” field. 1)

1) If the clip name is a standard name, it is changed to the unused clip name with the smallest number. (Example: If names C0001 to C0020 are in use, the name “C0021”).

If the clip name is a user-defined name, a serial number is appended to the clip name. (Example: If the name is “EveningNews”, “EveningNews(1)”).

**To cancel the processing**
Do one of the following.
- Select “Abort: Immediately”, and then press the SET/S.SEL button or the MENU knob.
- If you are transferring multiple clips, select “Abort: After this clip”, and then press the SET/S.SEL button or the MENU knob. (The transfer of subsequent clips will be cancelled after transfer of the current clip finishes.)

- Set the ETHERNET/USB item on the POWER SAVE page of the OPERATION menu to DSABL.

**Note**
When several files are to be transferred, the entire transfer task is cancelled when the first transfer failure occurs. Subsequent clips are not transferred.

When the transfer of all files has finished, the Uploading Result Report screen appears. Select “OK”, and then press the SET/S.SEL button or the MENU knob. This returns you to the clip thumbnail screen.

**To upload part of a clip**
You can select part of a clip in the expand thumbnail screen or the chapter thumbnail screen and upload that part.

**Expand thumbnail screen:** The clip is divided arbitrarily into parts of equal length, regardless of content. Use this method if you do not need to specify the transfer range precisely.

**Chapter thumbnail screen:** Use this method if you want to transfer a specific range. (By setting essence marks at the start point and end point of the transfer range, you can specify the range with a precision of one frame.)

1. In the clip thumbnail screen, select a clip and press the EXPAND or CHAPTER button.
   The expand thumbnail screen or the chapter thumbnail screen appears.

2. Select the transfer range.
   **To select multiple thumbnails**
   While holding the SHIFT key down, turn the MENU knob, or press the ◄/IN or ►/OUT button.
The duration of the transfer range appears in the lower right of the screen.

**Note**

When the selected range (duration) in the expand thumbnail screen is less than two seconds, it is expanded automatically to two seconds.

**3** Execute step 2 to 9 of the previous section “To upload entire clips”.

### Downloading clips

Proceed as follows to download clips from a remote host (such as other XDCAM device devices or a material server).

*See page 109 for information about thumbnail screen operations.*

**1** Display the Disc Menu.

**2** Select Download Clip via Direct FTP, and then press the SET/S.SEL button or the MENU knob.

The Select Remote Host screen of the Download Clip via Direct FTP command appears.

**3** Execute steps 6 to 9 of “To upload entire clips” (page 137).

If the connection succeeds, the Select Clip to Download screen appears.

- When more 301 or more clips are stored on a remote host, the denominator indicating the clip total at the upper right is shown as “- - -”, and the names of the 301st and following clips are not displayed.
- File names containing other than ASCII characters (kanji and so on) are not displayed.

**4** Select a clip to download, and then press the SET/S.SEL button or the MENU knob.

The download starts.

When the download finishes, the Downloading Result Report screen appears. Select “OK”, and then press the SET/S.SEL button or the MENU knob. This returns you to the clip thumbnail screen.

### Copying clips directly between XDCAM devices

In the field or another environment where the devices are not connected to a network, you can copy (upload) clips between XDCAM devices by connecting them directly. The example in the following procedure shows how to copy a clip from this unit to a PDW-HD1500. Insert discs into both units and proceed as follows.

**1** Connect this unit and the PDW-HD1500 by a network cable.

The cable can be either a cross cable or a straight cable.

**2** Set up the two units as follows.
Settings on this unit

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>POWER SAVE</td>
<td>ETHERNET/ENABLE</td>
</tr>
<tr>
<td>page of OPERATION</td>
<td>USB</td>
</tr>
<tr>
<td>NETWORK</td>
<td>DHCP ENABLE</td>
</tr>
<tr>
<td>SETTING page of</td>
<td>UPnP ENABLE</td>
</tr>
<tr>
<td>MAINTENANCE menu</td>
<td></td>
</tr>
</tbody>
</table>

Settings on the PDW-HD1500

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Item M50 in the</td>
<td>ENABLE</td>
</tr>
<tr>
<td>MAINTENANCE menu: DHCP</td>
<td></td>
</tr>
<tr>
<td>Item M59 in the</td>
<td>ENABLE</td>
</tr>
<tr>
<td>MAINTENANCE menu: UPnP</td>
<td></td>
</tr>
</tbody>
</table>

3 Power both units off and on again, and wait for about three minutes.

4 Check that the IP addresses of the two units have been set as follows by the Auto-IP function.

<table>
<thead>
<tr>
<th>Item</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>NETWORK</td>
<td>169.254.XX</td>
</tr>
<tr>
<td>SETTING page of</td>
<td>X.</td>
</tr>
<tr>
<td>MAINTENANCE menu: ADDRESS</td>
<td>XXX</td>
</tr>
<tr>
<td>(X: any number)</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>Item M51 in the</td>
<td>169.254.XXX.XXX</td>
</tr>
<tr>
<td>MAINTENANCE menu: IP ADDRESS</td>
<td>(X: any number)</td>
</tr>
</tbody>
</table>

5 In the clip list thumbnail screen of this unit, select the clip to copy (upload).

6 Display the Thumbnail Menu.

7 Select Upload Clips via Direct FTP, and then press the SET/S.SEL button or the MENU knob.

With ➞ selected, the Select Transfer Type screen of the Upload Clips via Direct FTP command appears.

8 Press the SET/S.SEL button or the MENU knob.
The Select Remote Host screen appears.

9 Select “Hosts Discovered via UPnP”, and then press the SET/S.SEL button or the MENU knob.
The detected connection destination device (the PDW-HD1500) appears in the Select Host Discovered via UPnP screen.

10 Press the SET/S.SEL button or the MENU knob.
Detailed information about the connection destination device (the PDW-HD1500) appears.

11 With “Connect” selected, press the SET/S.SEL button or the MENU knob.
Transfer of the clip begins as soon as the connection is established.
During transfer of the clip, “NETWORK!” appears in the display of the connection destination device (the PDW-HD1500).

When transfer of the clip completes, an Uploading Result Report appears on the screen.
Press the SET/S.SEL button or the MENU knob to return to the clip thumbnail screen.

12 Check the copied clip in the clip thumbnail screen of the connection destination device (the PDW-HD1500).
You can access many functions from the keyboard, without displaying a menu (shortcut operations). Shortcuts are available for the following functions. The plus sign (+) indicates that one button is held down while another is pressed, for example “SHIFT + RESET/RETURN”.

Note
The same shortcut may access different functions, depending on the screen that is active when it is executed.

<table>
<thead>
<tr>
<th>Function</th>
<th>Operation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Clip List Thumbnail (display clip list thumbnail screen)</td>
<td>SUB CLIP/DISC MENU</td>
</tr>
<tr>
<td>Expand Thumbnail (display expand thumbnail screen)</td>
<td>DISP SEL/EXPAND</td>
</tr>
<tr>
<td>Chapter Thumbnail (display chapter thumbnail screen)</td>
<td>HOLD/CHAPTER</td>
</tr>
<tr>
<td>Essence Mark Thumbnail (display essence mark thumbnail screen)</td>
<td>SHIFT + THUMBNAIL/ESSENCE MARK</td>
</tr>
<tr>
<td>Add Sub Clip (add sub clip)</td>
<td>SHIFT + SET/S.SEL</td>
</tr>
<tr>
<td>Delete Clip (delete clip)</td>
<td>SHIFT + RESET/RETURN</td>
</tr>
<tr>
<td>Lock/Unlock Clip (lock or unlock clip)</td>
<td>SHIFT + STOP</td>
</tr>
<tr>

</tr>
<tr>
<td>Cue up Inpoint (cue up In point)</td>
<td>Left-arrow + PREV or left-arrow + NEXT</td>
</tr>
<tr>
<td>Cue up Outpoint (cue up Out point)</td>
<td>Right-arrow + PREV or right-arrow + NEXT</td>
</tr>
<tr>
<td>Reset Inpoint (reset In point)</td>
<td>Left-arrow + RESET/RETURN</td>
</tr>
<tr>
<td>Reset Outpoint (reset Out point)</td>
<td>Right-arrow + RESET/RETURN</td>
</tr>
<tr>
<td>Cue up (cue up)</td>
<td>SET/S.SEL a)</td>
</tr>
<tr>
<td>Cue up &amp; Play (cue up and play)</td>
<td>PLAY/PAUSE b)</td>
</tr>
<tr>
<td>Page Down (switch to next page)</td>
<td>SHIFT + down-arrow or F FWD</td>
</tr>
<tr>
<td>Page Up (switch to previous page)</td>
<td>SHIFT + up-arrow or F REV</td>
</tr>
<tr>
<td>Go To End (go to the last item)</td>
<td>SHIFT + NEXT</td>
</tr>
<tr>
<td>Go To Top (go to the first item)</td>
<td>SHIFT + PREV</td>
</tr>
<tr>
<td>Select Multi Clip (select multiple clips)</td>
<td>SHIFT + right-arrow or SHIFT + left-arrow</td>
</tr>
<tr>
<td>Exit (exit the current thumbnail screen)</td>
<td>THUMBNAIL/ESSENCE MARK</td>
</tr>
</tbody>
</table>

a) If Settings >SET Key on Thumbnail in the Disc Menu is set to “Cue up & Play”, then play starts as soon as cueup is ready.
b) If Settings >SET Key on Thumbnail in the Disc Menu is set to “Cue up & Play”, then pressing the SET/S.SEL button has the same effect.
## Menu Organization

The following chart shows the organization of menus in this camcorder.

### TOP MENU

TOP menu and top-level menus

The TOP menu appears when, with no menu displayed, you hold down the MENU knob and set the MENU ON/OFF switch to ON. The TOP menu contains only top-level menus.

```
<TOP MENU>
#USER
#USER MENU CUSTOMIZE
#ALL
#OPERATION
#PAINT
#MAINTENANCE
#FILE
#DIAGNOSIS
```

When you select a top-level menu, the most recently shown page of that menu appears. The CONTENTS page appears when the menu is selected for the first time.

For details about how to use menus, see page 189.

USER menu

This menu allows you to add any desired page from the OPERATION, PAINT, MAINTENANCE, FILE, and DIAGNOSIS menus to suit your needs. By gathering frequently used pages on the USER menu beforehand, you can call up them quickly whenever you need them.

This menu is normally displayed when the MENU ON/OFF switch is set to ON.

USER MENU CUSTOMIZE menu

This menu allows you to add pages to or delete pages from the USER menu to suit your needs.

ALL menu

This menu allows you to handle all items in the OPERATION, PAINT, MAINTENANCE, FILE, and DIAGNOSIS menus as if they were in one menu.

OPERATION menu

This menu contains items for changing settings according to conditions related to the subject when the camcorder is being operated.

PAINT menu

This menu contains items for making detailed image adjustments while using a waveform.
monitor to monitor the waveforms output by the camera. Support of a video engineer is usually required to use this menu. Although you can also use an external remote control unit to set the items on this menu, this menu is effective when using the camcorder by itself outdoors.

**MAINTENANCE menu**

This menu contains items for making settings for audio, timecode, essence marks, and battery.

**FILE menu**

This menu is for saving the adjusted data in the camcorder memory or in a “Memory Stick”. The following files can be saved.

**User files**

User files save the setting items and setting data of customized USER menus. You can save up to 100 user files in a “Memory Stick”. Once you save a user file in a “Memory Stick”, you can easily set the USER menu to your preference by loading the file.

*For details on user files, see “Saving and Recalling User Files” on page 215.*

**ALL files**

ALL files save the setting data of all of the menus. You can save up to 100 ALL files in a “Memory Stick”.

Once a camcorder is set up according to your preferences and you save an ALL file in a “Memory Stick”, you can easily set other camcorders to those settings by loading the data from the “Memory Stick”.

**Scene files**

In the scene file, the setting values of PAINT menu items set to shoot a particular scene are saved. You can save up to five scene files in the camcorder memory and up to 100 scene files in a “Memory Stick”. For example, first adjust the settings to shoot a rehearsal of a particular scene and then save them as a scene file. Then load that file before the actual shooting so that you can quickly recreate setup conditions of the rehearsal.

**Reference files**

Reference files save the reference values that are set when STANDARD is executed in the SCENE FILE page of the PAINT menu. You can save one reference file in the internal memory of the unit and one in a “Memory Stick”.

**Lens files**

Lens files save the setting data used to compensate for the characteristics of lenses, such as flare, white shading, and auto iris gain. You can save up to 32 lens files in the internal memory of the unit and up to 100 lens files in a “Memory Stick”.

**DIAGNOSIS menu**

This menu shows the digital hours meter, the ROM version, and information about the internal device status of the camcorder.

**Note**

Device specific data (output levels and shading that requires adjustment for the specific device) is not saved.
## Menu List

### Tips
- The bold-faced numbers designate the pages that have been registered in the USER menu at the factory.
- The following lists include items and settings that appear only when an option board or separately sold software is installed.
- The bold-faced settings are the factory default settings.
- The initial value of items with a setting range of –99 to 99 is 0.
- When the setup value in the Settings column is surrounded by parentheses ( ), the value is a relative value. The setting range shown on the menu screen may differ from what is shown in the manual.

### OPERATION menu

<table>
<thead>
<tr>
<th>No.</th>
<th>Page</th>

| 09  | WRR  | WRR VALID CH SEL | ALL/CH1 | Selects whether to enable channels 1 and 2 of the wireless receiver, or channel 1 only.  
**ALL:** Enable both channel 1 and 2.  
**CH1:** Enable channel 1 only. Select this setting to use the wireless receiver as a monaural receiver. |
| WRR | CH SELECT | TX1/TX2 | Specifies the target channel for other items in this menu.  
**TX1:** Channel 1  
**TX2:** Channel 2 |
| WRR | DELAY COMP | OFF/ON | Enables or disables the delay compensation function for wireless audio input.  
**OFF:** Disables the function.  
**ON:** Enables the function (the audio in all EE output is delayed by about 8 ms). |
| TX*(#: channel number) | – | Displays the name of the transmitter whose signals are being received on the channel selected by WRR CH SELECT.  
The channel number and name shown here are recorded inside the `<Description>` tag in the clip metadata file C*M01.XML (where * is 0001 to 9999). |
| TX* AUDIO PEAK*(#: channel number) | – | Displays whether the AF level of the transmitter whose signals are being received on the channel selected by WRR CH SELECT is over the peak. |
| TX* INPUT LEVEL*(#: channel number) | MIC/LINE | Displays whether the input level of the transmitter whose signals are being received on the channel selected by WRR CH SELECT is set to MIC or LINE. |
| TX* ATT LEVEL*(#: channel number) | – | Sets the ATT level of the transmitter whose signals are being received on the channel selected by WRR CH SELECT (the permissible setting range may vary depending on the transmitter device). |
| TX* LCF FREQ*(#: channel number) | – | Sets the Low Cut Filter frequency of the transmitter whose signals are being received on the channel selected by WRR CH SELECT (the permissible setting range may vary depending on the transmitter device). |
| TX* SYSTEM DELAY*(#: channel number) | AUTO/ 0.0ms~8.0ms | When WRR DELAY COMP is set to ON, sets the amount of audio delay for the channel selected by WRR CH SELECT.  
**AUTO:** Automatically adjusts the amount of delay so that the delay in the audio received from the wireless receiver is zero.  
**0.0ms~8.0ms:** Sets the amount of anticipated wireless system delay, for cases in several wireless systems are being used over a device such as an audio mixer. |

<td>FAN CONTROL</td>
<td>AUTO/R.MIN/MIN</td>
<td>Specifies the control method for the cooling fan. (This setting is retained even when the unit is powered off.) AUTO: Control the rotation of the cooling fan automatically. R.MIN: Rotate the cooling fan at low speed during recording only (and stop the rotation when this unit is used in an environment so cool that temperatures inside the unit do not rise). MIN: Rotate the cooling fan at low speed (and stop the rotation when this unit is used in an environment so cool that temperatures inside the unit do not rise).</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>Note Regardless of this setting, the cooling fan rotates at high speed if temperatures inside the unit rise to a temperature near the alarm level.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>FOCUS MAG SW</td>
<td>MTRY/ALT</td>
<td>Selects the method that activates the FOCUS MAG function when the function is assigned to an ASSIGN switch. MTRY: The function is on as long as the switch is held down. ALT: Each press of the switch toggles between on and off. (The function goes off automatically five seconds after it is turned on.)</td>
</tr>
</tbody>
</table>
14 CAM CONFIG 3

ALAC OFF/AUTO

Specifies whether to activate the aberration correction function.

OFF: Do not activate.
AUTO: Activate aberration correction when a lens that supports aberration correction is mounted.

Note

For some aberration correction lenses, the aberration correction function may not activate (“ALAC” does not appear in the viewfinder) immediately after this unit is powered on, even when this item is set to “AUTO”. If this occurs, turn the zoom and focus rings of the lens all the way to one side, and then check to make sure that “ALAC” has appeared in the viewfinder.

Contact your dealer or a Sony service representative for more information about lenses that support aberration correction.

DC SDI BANDWIDTH WIDE/NARW

Specifies the video bandwidth of SD-SDI output after down conversion.

WIDE: Wideband
NAR: Narrowband

15 PRESET WHITE

COLOR TEMP <P> Display reference color temperature.

Sets the white balance preset value.

C TEMP BAL <P> (-99 to 99)

Finer setting when the desired color could not be obtained with the COLOR TEMP <P> color temperature setting.

R GAIN <P> (-99 to 99)

Sets the R gain preset value.

G GAIN <P> (-99 to 99)

Sets the G gain preset value.

AWB ENABLE <P> OFF/ON

When the WHITE BAL switch is set to PRST, turns the function that enables execution of AWB (auto white balance) on and off.

</table>
To use the MENU ON/OFF switch, open the cover of the menu operating section. When the camcorder is powered on, set the MENU ON/OFF switch to ON to display the menu on the viewfinder screen and the LCD monitor. If this is the first time the menu has been used after the camcorder has been powered on, the USER menu is displayed. If the menu has been used before, the last accessed page appears.

When the menu is not displayed on the LCD monitor
Press the DISP SEL/EXPAND button below the LCD monitor to select the CHAR display.

To clear the menu display from the screen
Set the MENU ON/OFF switch to OFF. (When the cover of the menu operating section is closed, this switch is automatically set to OFF.) When the DISPLAY of the DISPLAY/ASPECT switch on the viewfinder is set to on, the display indicating the current status of the camcorder appears on the viewfinder screen.

For details, see “Selecting the display items” on page 197.

To display the TOP menu
With no menu displayed on the screen, hold down the MENU knob and set the MENU ON/OFF switch to ON. Depending on the internal switch settings, display of the TOP menu may be disabled. For details, refer to the Maintenance Manual.

Basic menu operations
By pressing and turning the MENU knob, you can set various menu items. In the remainder of this section, the LCD monitor is generally shown as an example of the menu display, but a similar display also appears on the viewfinder screen.

To select the setting items and values on the menu
Turn the MENU knob to select in the cases explained below.
### To scroll pages

<table>
<thead>
<tr>
<th>TOP 001 OUTPUT1</th>
<th>TOP 005 REC FUNCTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>SDI OUT1 SELECT: OFF</td>
<td>CACHE/INTVAL REC: OFF</td>
</tr>
<tr>
<td>SDI OUT2 SELECT: OFF</td>
<td>DISC EXCHG CACHE: OFF</td>
</tr>
<tr>
<td>TEST OUT SELECT: OFF</td>
<td>CLIP CONT REC: OFF</td>
</tr>
<tr>
<td>TEST OUT SUPER: OFF</td>
<td>LIVE LOGGING: OFF</td>
</tr>
</tbody>
</table>

When ? blinks, turn the MENU knob to switch pages.

### To select a menu or setting item

<table>
<thead>
<tr>
<th>001 OUTPUT1</th>
<th>001 OUTPUT1</th>
</tr>
</thead>
<tbody>
<tr>
<td>SDI OUT1 SELECT: OFF</td>
<td>SDI OUT1 SELECT: OFF</td>
</tr>
<tr>
<td>SDI OUT2 SELECT: OFF</td>
<td>SDI OUT2 SELECT: OFF</td>
</tr>
<tr>
<td>TEST OUT SELECT: OFF</td>
<td>TEST OUT SELECT: VBS</td>
</tr>
<tr>
<td>TEST OUT SUPER: OFF</td>
<td>TEST OUT SUPER: OFF</td>
</tr>
</tbody>
</table>

When • appears, turn the MENU knob to move • up and down.

### To change a setting value

<table>
<thead>
<tr>
<th>001 OUTPUT1</th>
<th>001 OUTPUT1</th>
</tr>
</thead>
<tbody>
<tr>
<td>SDI OUT1 SELECT: OFF</td>
<td>SDI OUT1 SELECT: OFF</td>
</tr>
<tr>
<td>SDI OUT2 SELECT: OFF</td>
<td>SDI OUT2 SELECT: OFF</td>
</tr>
<tr>
<td>TEST OUT SELECT: VBS</td>
<td>TEST OUT SELECT: OFF</td>
</tr>
<tr>
<td>TEST OUT SUPER: OFF</td>
<td>TEST OUT SUPER: OFF</td>
</tr>
</tbody>
</table>

When ? blinks, turn the MENU knob to change the setting (ON/OFF, value, etc.).

### To confirm the selection of a menu, a setting item, or a setting value

Each time you press the MENU knob, the menu display switches in the following sequence.
Example: When using the OPERATION menu

If the menu has not been used

If the menu has been used before

Menu selection mode

Setting item selection mode

Setting value selection mode

Note

If the TOP menu has not been displayed since the camcorder is powered on, “TOP” does not appear at the upper right on the above screen, and you cannot go to the TOP menu. In this case, follow the procedure in “To display the TOP menu” (page 189).
To display the TOP menu when another menu is displayed

Move ↑ to “TOP” displayed at the top right of each page of the menu, and press the MENU knob. Or flick the CANCEL/PRST/ESCAPE switch repeatedly to ESCAPE until the TOP menu is displayed.

Using the USER menu (example menu operation)

This section explains menu operations using the USER menu as an example. The operations are the same for the ALL, OPERATION, PAINT, MAINTENANCE, and DIAGNOSIS menus.

For details about how to operate the USER MENU CUSTOMIZE menu, see “Editing the USER menu” (page 193).

1 Set the MENU ON/OFF switch to ON.
Normally, the USER menu appears. If it does not, turn the MENU knob to move ↑ to USER in the TOP menu, and press the MENU knob.
If the USER menu has been used before, the last accessed page appears. In this case, go to step 2.
If this is the first time the USER menu has been displayed, the CONTENTS page of the USER menu appears. In this case, follow the procedure below.

Press the MENU knob. Then turn the MENU knob to move ↑ to the desired page number.

This indicates that the menu screen can be scrolled.

2 Press the MENU knob again.
The page selected in 1 is displayed.
Go to step 3.

When you set items on the ALL, OPERATION, PAINT, MAINTENANCE, FILE, and DIAGNOSIS menus, move ↑ to the menu that contains the desired item in the TOP menu, and then press the MENU knob.

2 Turn the MENU knob until the desired page appears.

3 Press the MENU knob.
↑ and ● appear.

4 Turn the MENU knob to move ↑ to the desired item, and then press the MENU knob.
↑ changes to ●, and ● changes to ?.

5 Turn the MENU knob to change the setting.
Depending on the direction of turning the knob, the setting value increases, decreases, switches between ON and OFF, and so on.

To interrupt changing the settings
Set the MENU ON/OFF switch to OFF.
By setting the MENU ON/OFF switch to ON again, the values that were displayed when you interrupted the setting operations will reappear so you can continue making settings.

6 Press the MENU knob.
● changes to ↑, and ? changes to ●. The selection is confirmed.

7 To continue setting other items on the same page, repeat steps from 4 to 6.
To end the menu operation, set the MENU ON/OFF switch to OFF.
The menu disappears from the screen, and the display indicating the current status of the camcorder appears along the top and bottom of the screen.

To cancel a change or return to the standard settings

Note
Depending on the setting item, in some cases only the function to return to the standard setting is valid.

1. Before pressing the MENU knob in step 6 of the above procedure, flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position.
The message “CANCEL DATA OK?” appears.

2. Flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position again.
The message “CANCEL DATA” appears to indicate that the change has been cancelled.

3. To return to the standard settings after pressing the MENU knob in step 6 of the above procedure, flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position.
The message “PRESET DATA OK?” appears on the screen.

4. Flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position again.
This returns to the standard settings.

To move to another page

When ? appears in front of the page number
Turn the MENU knob to switch pages.

When nothing appears in front of the page number
Turn the MENU knob to move ◆ to the page number, and press the MENU knob. Then turn the MENU knob to switch pages.

Editing the USER menu

The USER MENU CUSTOMIZE menu allows you to configure a USER menu that consists only of pages and items that you need by adding, deleting or replacing the pages.

To add a new page

The USER MENU CUSTOMIZE menu allows you to add a new page to the USER menu.
While the EDIT page contains factory-preset items, the EDIT USER 1 to EDIT USER 19 pages are all blank in their initial state. You can register up to 10 items, including blank lines, on each of these pages.

(How to select an item in the menu screen: Turn the MENU knob to move ◆ to the desired item.)

1. Display the TOP menu (see page 189).

2. Select USER MENU CUSTOMIZE, and press the MENU knob.
If this is the first time the USER MENU CUSTOMIZE menu has been displayed, the CONTENTS page of the menu appears.

3. If the CONTENTS page is displayed, press the MENU knob. Then select one of EDIT USER 1 to EDIT USER 19, and press the MENU knob.
If a different page other than the CONTENTS page is displayed, turn the MENU knob until the desired page appears, then press the MENU knob.
Example: when the EDIT USER 9 page is selected

4 Press the MENU knob. Then select the line where you want to add an item, and press the MENU knob.
The EDIT FUNCTION page appears.

5 Select INSERT, and press the MENU knob.
The following menu appears.

6 Add the items as follows.

- Press the MENU knob, scroll the page until the desired item appears, and then press the MENU knob again.
- Press the MENU knob again, select the desired item, and then press the MENU knob.
The EDIT USER 9 page appears again, displaying the newly added item.

7 Repeat steps 4 to 6 to add the remaining items.
You can add up to 10 items on one page.

To delete items from a page by using the CANCEL/PRST/ESCAPE switch

1 Follow steps 1 to 3 in “To add a new page” (page 193).
2 Press the MENU knob. Then select the item that you want to delete.
3 Flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position. The message “DELETE ITEM OK?” appears.
4 Flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position again.
To delete items from a page by using the menu

1 Follow steps 1 to 3 in “To add a new page” (page 193).
2 Press the MENU knob. Then select the item that you want to delete, and press the MENU knob.
The EDIT FUNCTION page appears.
3 Select DELETE, and press the MENU knob.
The previously displayed page appears again, and the message “DELETE OK? YES or NO” appears.
4 Select YES, and press the MENU knob.
To replace items on a page

1 Follow steps 1 to 3 in “To add a new page” (page 193).
2 Press the MENU knob. Then select the item that you want to replace, and press the MENU knob.
The EDIT FUNCTION page appears.
3 Select MOVE, and press the MENU knob.
The previously displayed page appears again.
4 Select the position to which you want to move the item, and press the MENU knob.
The item selected in step 2 moves to the position that you selected in step 4.

To insert a blank line

1. Follow steps 1 to 3 in “To add a new page” (page 193).

2. Press the MENU knob. Then select the item that you want to replace, and press the MENU knob.
   The EDIT FUNCTION page appears.

3. Select BLANK, and press the MENU knob.
   The previously displayed page appears again, and a blank line is inserted above the specified item.

   **Note**
   You cannot insert a blank line on a page where 10 items have already been registered.

To add/delete/replace pages

You can add a new page to the USER menu, delete a page from the USER menu, or replace pages, using the EDIT PAGE of the USER MENU CUSTOMIZE menu.

To add a page

(How to select an item in the menu screen: Turn the MENU knob to move ◀ to the desired item.)

1. Display the TOP menu (see page 189).

2. Select USER MENU CUSTOMIZE, and press the MENU knob.
   If this is the first time the USER MENU CUSTOMIZE menu has been displayed, the CONTENTS page appears. If the menu has been used before, the last accessed page appears.

3. If the CONTENTS page is displayed, press the MENU knob. Then select EDIT PAGE, and press the MENU knob.
   If a different page is displayed, turn the MENU knob until the EDIT PAGE screen appears.

   The EDIT PAGE appears.

4. Press the MENU knob. Then select the position where you want to add the page, and press the MENU knob.
   The EDIT FUNCTION page appears.

5. Select INSERT, and press the MENU knob.
   The CONTENTS page appears.

6. Select the desired page, and press the MENU knob.
   The number and name of the page selected in step 6 is added above the item selected in step 4.

   To cancel adding a page
   Before pressing the MENU knob in step 6, select ESC at the top right of the screen, and press the MENU knob.
   The EDIT PAGE screen appears again.

To delete a page by using the CANCEL/PRST/ESCAPE switch

1. Follow steps 1 to 3 in “To add a page” (page 195).

2. Press the MENU knob. Then select the page that you want to delete.

3. Flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position.
   The message “DELETE PAGE OK?” appears.

4. Flick the CANCEL/PRST/ESCAPE switch to the CANCEL/PRST position again.

To delete a page by using the menu

1. Follow steps 1 to 3 in “To add a page” (page 195).
Press the MENU knob. Then select the page that you want to delete, and press the MENU knob.
The EDIT FUNCTION page appears.

Select DELETE, and press the MENU knob.
The previously displayed page appears again, and the message “DELETE OK? YES ↳ NO” appears at the upper right.

Select YES, and press the MENU knob.

To replace pages

Follow steps 1 to 3 in “To add a page” (page 195).

Press the MENU knob. Then select the page that you want to move, and press the MENU knob.
The EDIT FUNCTION page appears.

Select MOVE, and press the MENU knob.
The previous screen appears again.

Select the position to which you want to move the page, and press the MENU knob.
The page selected in step 2 is moved to the position.

To rename pages

The names of pages (USER 1 to USER 19) created with EDIT USER 1 to EDIT USER 19 can be changed. (The maximum name length is 15 characters.)

Note

The ASSIGN ITEM SEL page cannot be renamed.

Display the EDIT PAGE NAME1 or EDIT PAGE NAME2 of the USER MENU CUSTOMIZE menu.

EDIT PAGE NAME1: To rename USER1 to USER10
EDIT PAGE NAME2: To rename USER11 to USER19

For details on menu operations, see “Basic menu operations” on page 189.

Select the page that you want to rename (USER 1 to USER 19), and press the MENU knob.

A character table appears.

Follow steps 3 and 4 described in “Setting the shot ID” on page 201 to enter characters.

When you have finished entering the name, turn the MENU knob to move to END, and press the MENU knob.
The entered name is now displayed.

Resetting USER menu settings to the standard settings

You can return all settings in the USER menu to standard settings.
(How to select an item in the menu screen: Turn the MENU knob to move ↳ to the desired item.)
1 Display the USER FILE page of the FILE menu, and press the MENU knob.
For details on menu operations, see “Basic menu operations” on page 189.

2 Press the MENU knob, then select USER PRESET, and press the MENU knob.
The message “PRESET OK? YES
NO” appears.

3 Select YES, and press the MENU knob.
The message “COMPLETE” appears, and the settings for all items in the USER menu are reset to the standard settings.

Setting the Status Display on the Viewfinder Screen and the LCD Monitor

This section explains the menu settings for the display of the viewfinder screen. These settings are also used for the display of the LCD monitor in the same way.

Selecting the display items

To select the items to be displayed on the viewfinder screen (with the viewfinder DISPLAY of the DISPLAY/ASPECT switch set to on) and the LCD monitor, use the VF DISP 1, VF DISP 2, and VF DISP 3 pages of the OPERATION menu.
(How to select an item in the menu screen: Turn the MENU knob to move \(\uparrow\) to the desired item.)

1 Display the VF DISP 1, VF DISP 2, or VF DISP 3 page of the OPERATION menu, and press the MENU knob.
For details on menu operations, see “Basic menu operations” on page 189.

2 Select the desired setting item, and press the MENU knob.
On the VF DISP 1, VF DISP 2, and VF DISP 3 pages, you can select any of the following items to turn its display on or off.

VF DISP 1 page

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>VF DISP</td>
<td>Turning on or off the viewfinder display (^{a)})</td>
</tr>
<tr>
<td>VF DISPLAY MODE</td>
<td>Selecting the display mode (^{b)})</td>
</tr>
<tr>
<td>DISP EXTENDER</td>
<td>Extender indicator</td>
</tr>
<tr>
<td>DISP FILTER</td>
<td>Types of the ND filter</td>
</tr>
<tr>
<td>DISP WHITE</td>
<td>White balance memory indicator</td>
</tr>
<tr>
<td>DISP GAIN</td>
<td>Gain indicator</td>
</tr>
<tr>
<td>DISP SHUTTER</td>
<td>Shutter speed and ECS mode indicator</td>
</tr>
<tr>
<td>DISP AUDIO</td>
<td>Audio level indicator</td>
</tr>
</tbody>
</table>
Setting the Status Display on the Viewfinder Screen and the LCD Monitor

Chapter 6  Menu Displays and Detailed Settings

VF DISP 2 page

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DISP DISC</td>
<td>Remaining disc capacity indicator</td>
</tr>
<tr>
<td>DISP IRIS</td>
<td>Iris opening indicator</td>
</tr>
</tbody>
</table>

a) The viewfinder display can be also turned on or off by using the DISPLAY of the DISPLAY/ASPECT switch on the viewfinder.
b) For detailed information on the display mode, see “Change confirmation/adjustment progress messages” (page 198).

VF DISP 3 page

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DISP CLIP NAME</td>
<td>Selects the type of clip name to display. a)</td>
</tr>
<tr>
<td>DISP SCENE FILE</td>
<td>Turns on or off the display of the number of the currently loaded scene file.</td>
</tr>
<tr>
<td>LOW LIGHT LEVEL</td>
<td>Sets the LOW LIGHT threshold value.</td>
</tr>
<tr>
<td>VF BATT WARNING</td>
<td>Specifies the remaining battery capacity level that starts the flashing warning in the viewfinder.</td>
</tr>
<tr>
<td>ABSOLUTE VALUE</td>
<td>Turns on and off the mode that displays numeric menu settings as absolute values. b)</td>
</tr>
</tbody>
</table>

3 Turn the MENU knob to select the desired setting (ON, OFF, or value), and press the MENU knob.

4 Repeat steps 2 and 3 until you have set all of the desired items.

Change confirmation/adjustment progress messages

You can limit or suppress the messages that give details of setting changes and adjustment progress and results by setting a display mode. The conditions under which messages are displayed and their correspondence with the display mode are as follows:

VOLT: The voltage (VOLT) is displayed continuously.
Y: Message is displayed.
N: Message is not displayed.

<table>
<thead>
<tr>
<th>Message display condition</th>
<th>Message</th>
<th>Display mode setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>When the filter selection has been changed</td>
<td>FILTER: n (where n = 1, 2, 3, 4)</td>
<td>N N Y</td>
</tr>
<tr>
<td>When the gain setting has been changed</td>
<td>GAIN: n (where n = –6dB, –3dB, 0dB, 3dB, 6dB, 9dB, 12dB, 18dB, 24dB, 30dB, 36dB, 42dB)</td>
<td>N N Y</td>
</tr>
<tr>
<td>When the setting of the WHITE BAL switch has been changed</td>
<td>WHITE: n (where n = A CH, B CH, PRESET) or ATW: RUN</td>
<td>N N Y</td>

<td>DCC: ON (or OFF)</td>
<td>N Y Y</td>
</tr>
<tr>
<td>When the shutter speed and mode setting has been changed</td>
<td>:SHUTTER: 1/100 (or 1/125, 1/250, 1/500, 1/1000, 1/2000, ECS)</td>
<td>N Y Y</td>
</tr>
<tr>
<td>When the black or white balance has been adjusted</td>
<td>E.g. AWB: OK</td>
<td>N Y Y</td>
</tr>
</tbody>
</table>

Changing the display mode

1. **Display the VF DISP 1 page of the OPERATION menu, and press the MENU knob.**
   
   For details on menu operations, see “Basic menu operations” on page 189.

2. **Select VF DISP MODE, and press the MENU knob.**

3. **Select the desired display mode, and press the MENU knob.**

Setting the marker display

Switch the display of the center and safety zone markers on or off, and select whether the area indicated by the safety zone marker is 80%, 90%, 92.5%, or 95% of the screen area.

How to select an item in the menu screen: Turn the MENU knob to move ◀ to the desired item.

1. **Display the MARKER 1 or MARKER 2 page of the OPERATION menu, and press the MENU knob.**

   For details on menu operations, see “Basic menu operations” on page 189.

2. **Select the desired item, and press the MENU knob.**

   You can set the following items on the MARKER 1 and MARKER 2 pages.

### MARKER 1 page

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>MARKER</td>
<td>To hide all markers, set to “OFF”.</td>
</tr>
<tr>
<td>CENTER</td>
<td>To display the center marker, set to “ON”.</td>
</tr>
<tr>
<td>MARK</td>
<td>Selects the display mode of the center marker.</td>
</tr>
<tr>
<td>SAFETY</td>
<td>To display the safety zone, set to “ON”.</td>
</tr>
<tr>
<td>ZONE</td>
<td>Selects the safety zone range (80%, 90%, 92.5% or 95%).</td>
</tr>
<tr>
<td>ASPECT</td>
<td>To display the aspect marker, set to “ON”.</td>
</tr>
</tbody>
</table>

### Setting the marker display

- **ASPECT** Selects the aspect mode (15:9/14:9/13:9/4:3/1.85/2.35).
- **SELECT** To make the areas out of the selected aspect marker dimmer, set to “ON”.
- **MASK** To set the mask level, when the ASPECT MASK is set to “ON”.
- **MASK LVL** To set the mask level, when the ASPECT MASK is set to “ON”.
- **100%** To display the effective pixel area, set to “ON”.

a) The ASPECT MASK setting affects the viewfinder and LCD monitor display. In the following cases, it also affects the VBS signal.

   - When TEST OUT SELECT on the OUTPUT 1 page is set to VBS.
   - When both TEST OUT SUPER on the OUTPUT 1 page and SUPER(MARKER) on the SUPER IMPOSE page are set to ON.
   - When DOWN CON MODE on the OUTPUT 2 page is set to LETTR or SQEZE.
You can set the following items on the VF SETTING page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ZEBRA</td>
<td>Turns the zebra display on or off. a)</td>
</tr>
<tr>
<td>ZEBRA SELECT</td>
<td>Selects ZEBRA 1, ZEBRA 2 or BOTH.</td>
</tr>
<tr>
<td>ZEBRA 1 DET. LVL</td>
<td>Adjusts the level of the zebra 1 (20% to 70% to 107%) display.</td>
</tr>
<tr>
<td>ZEBRA 1 APT. LVL</td>
<td>Adjusts the aperture level of the zebra 1 display. (1% to 10% to 20%)</td>
</tr>
<tr>
<td>ZEBRA 2 DET. LVL</td>
<td>Adjusts the level of the zebra 2 (52% to 100% to 109%) display.</td>
</tr>
<tr>
<td>VF DETAIL LEVEL</td>
<td>Adjusts the sharpness of the viewfinder (–99 to 99).</td>
</tr>
<tr>
<td>VF ASPECT (SD)</td>
<td>Specifies whether to set the viewfinder screen and LCD monitor aspect ratio automatically or to set it to 16:9 when the IMX50/40/30 or DVCAM recording format is selected. When “16:9” is selected, then the screen is always displayed as a 16:9 screen (before being cut out to 4:3), even when ASPECT RATIO (SD) is set to “4:3”.</td>
</tr>
</tbody>
</table>

a) If you are using a viewfinder which is not equipped with a ZEBRA switch, use this item to turn the display on and off. If you are using a viewfinder with a ZEBRA switch, you can turn the display on and off either with the ZEBRA switch or with this menu operation.

**Note**

The four items ASPECT, ASPECT SELECT, ASPECT MASK, and ASPECT MASK LVL are ignored when the recording format is IMX50/40/30 or DVCAM and the aspect ratio is 4:3.

**MARKER 2 page**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>USER BOX</td>
<td>Turns the display of the box cursor on and off.</td>
</tr>
<tr>
<td>USER BOX WIDTH</td>
<td>Sets the width of the box cursor (distance from center to left or right edge).</td>
</tr>
<tr>
<td>USER BOX HEIGHT</td>
<td>Sets the height of the box cursor (distance from center to top or bottom edge).</td>
</tr>
<tr>
<td>USER BOX H POS</td>
<td>Sets the horizontal position of the center of the box cursor.</td>
</tr>
<tr>
<td>USER BOX V POS</td>
<td>Sets the vertical position of the center of the box cursor.</td>
</tr>
<tr>
<td>CENTER H POS</td>
<td>Sets the horizontal position of the center marker.</td>
</tr>
<tr>
<td>CENTER V POS</td>
<td>Sets the vertical position of the center marker.</td>
</tr>
<tr>
<td>ASPECT SAFE ZONE</td>
<td>Turns the display of the aspect safety zone on and off.</td>
</tr>
<tr>
<td>ASPECT SAFE AREA</td>
<td>Selects the range of the aspect safety zone (80%/90%/92.5%/95%).</td>
</tr>
</tbody>
</table>

3 Turn the MENU knob to change the setting, and press the MENU knob.

4 Repeat steps 2 and 3 until you have set all of the desired items.

**Setting the viewfinder**

You can make settings for viewfinder screen display functions.

(How to select an item in the menu screen: Turn the MENU knob to move ◄ to the desired item.)

1 Display the VF SETTING page of the OPERATION menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 Select the desired item, and press the MENU knob.

**Recording shot data superimposed on the color bars**

In the SHOT DISP page of the USER menu, you can select which shot data is recorded superimposed on the color bars. You can also select which of the shot IDs (1 to 4) set in the SHOT DATA page is recorded superimposed on the picture.
(How to select an item in the menu screen: Turn the MENU knob to move ● to the desired item.)

1 Display the SHOT DISP page of the OPERATION menu, and press the MENU knob.  
For details on menu operations, see “Basic menu operations” on page 189.

2 Select the desired item, and press the MENU knob.  
You can set the following items on the SHOT DISP page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHOT DATE</td>

</tr>
</tbody>
</table>

a) To carry out superimposed recording, select the SHOT ID number (1 to 4). Not to carry out superimposed recording, select “OFF”.

3 Turn the MENU knob to select whether or not to record the selected item superimposed on the color bars or the SHOT ID number, and press the MENU knob.

4 Repeat steps 2 and 3 until you have set all of the desired items.

To carry out superimposed recording
To actually record the items selected for superimposed recording on the SHOT DISP page, set the OUTPUT/DCC switch to BARS, DCC OFF.  
The items selected for superimposed recording appear on the screen and are recorded superimposed on the color bars.  

Example display: when SHOT DATA is set to ON

![Example display of superimposed recording](image)

Setting the shot ID

You can set a shot ID of up to 12 alphanumeric characters, spaces, and symbols.  
When the OUTPUT/DCC switch is set to BARS, DCC OFF, this shot ID is output with the color bar signal. You can set four shot IDs (ID-1 to ID-4).

Note

When the menu is displayed, the shot ID is not displayed even if the color bar signal is output.

(How to select an item in the menu screen: Turn the MENU knob to move ● to the desired item.)

1 Display the SHOT ID page of the OPERATION menu, and press the MENU knob.  
For details on menu operations, see “Basic menu operations” on page 189.

![Example shot ID display](image)
2 Select one of ID-1 to ID-4, and press the MENU knob.
A ■ mark appears over the first character position in the string, and characters can now be input.

3 Enter or change the shot ID.
When you are entering the whole shot ID, go to 2.

1 Turn the MENU knob to move the ■ mark to the character which you want to change, then press the MENU knob.

2 Turn the MENU knob until the ■ mark moves to the character position that you want to select, then press the MENU knob.

4 Repeat step 3 for each of the remaining characters.

5 When the input is complete, turn the MENU knob to move the ■ mark over END, then press the MENU knob.
This ends the input, and returns to the original SHOT ID page.

To insert a space
In step 3 above, move the ■ mark over INS, and press the MENU knob.
To cancel inserting a space, move the ■ mark over RET, then press the MENU knob.

To delete a character
In step 3 of “Setting the shot ID” (page 201), move the ■ mark over DEL, and press the MENU knob.
This deletes the character under the ■ mark in the shot ID row.
To cancel deleting the character, move the ■ mark over RET, and press the MENU knob.

To cancel changing shot ID
Before executing step 5 of “Setting the shot ID” (page 201), move the ■ mark over ESC, then press the MENU knob or flick the CANCEL/PRST/ESCAPE switch to ESCAPE.

Displaying the status confirmation screens
You can confirm the settings or status of the camcorder on the LCDs by displaying the following four screen.

ABNORMAL <!> screen
This window allows you to confirm why the ! (warning) indicator lights in the viewfinder. You can use the ‘!’ LED page of the OPERATION menu to set whether or not the ! (warning) indicator lights.

SYSTEM screen
This screen displays information such as the system frequency, the recording format, whether output from the TEST OUT connector is on or off, and the type of output signal.

FUNCTION screen
This screen displays the functions assigned to the ASSIGN switches, the detection level, and other information.

AUDIO STATUS screen
This screen allows you to confirm the following items related to audio.
• Audio bit rate
• Setting condition of DF/NDF
• Type of front microphone
• Type of input signal to audio channels 1 to 4
• Input level of audio channels 1 to 4

You can use the SET STATUS page of the OPERATION menu to set whether or not the status confirmation screens are displayed.

To display the status confirmation screens

You can use the CANCEL/PRST/ESCAPE switch as the STATUS ON/SEL/OFF switch when the MENU ON/OFF switch is set to OFF (when the cover of the menu operating section is closed, OFF is automatically selected).

To disable display of the status confirmation screens

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the SET STATUS page of the OPERATION menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 Select the desired item, and press the MENU knob.

You can set the following items on the SET STATUS page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>STATUS</td>
<td>Selects whether or not the ABNORMAL window is displayed (ON or OFF).</td>

<td>Selects whether or not the STATUS AUDIO window is displayed (ON or OFF).</td>
</tr>
<tr>
<td>AUDIO</td>
<td></td>
</tr>
</tbody>
</table>

3 Turn the MENU knob to change the setting, and press the MENU knob.

4 Repeat steps 2 and 3 until you have set all of the desired items.

---

Adjustments and Settings from Menus

Setting gain values for the GAIN selector positions

You can set the gain values for the L, M, and H positions of the GAIN selector, which switches the gain of the video amplifier.

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the GAIN SW page of the OPERATION menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 Select the item for the switch position, then press the MENU knob.

You can set the following items on the GAIN SW page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GAIN</td>
<td>Sets the gain value corresponding to the L position of the GAIN selector.</td>
</tr>
<tr>
<td>LOW</td>
<td></td>
</tr>
<tr>
<td>GAIN MID</td>
<td>Sets the gain value corresponding to the M position of the GAIN selector.</td>
</tr>
<tr>
<td>HIGH</td>
<td>Sets the gain value corresponding to the H position of the GAIN selector.</td>
</tr>
<tr>
<td>GAIN</td>
<td>Sets the gain value corresponding to TURBO GAIN function.</td>
</tr>
<tr>
<td>TURBO</td>
<td></td>
</tr>
</tbody>
</table>
Adjustments and Settings from Menus

Chapter 6 Menu Displays and Detailed Settings

Turn the MENU knob to select the gain value, and press MENU knob.
Any of –6, –3, 0, 3, 6, 9, 12, 18, 24, 30, 36 or 42 dB can be set for each of the L, M, H, and TURBO positions, in any sequence.

Repeat steps 2 and 3 until you have set all of the desired items.

Selecting the output signals

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

Display the OUTPUT 1 page of the OPERATION menu, and press the MENU knob.
For details on menu operations, see “Basic menu operations” on page 189.

Select the desired item, and press the MENU knob.
You can set the following items on the OUTPUT 1 page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TURBO SW IND</td>
<td>OFF: When you operate the GAIN selector after pressing the button to which the TURBO GAIN function has been assigned once, the video gain is changed according to the GAIN selector operation. ON: When the video gain is boosted to the video gain to the value preset by pressing the button to which the TURBO GAIN function has been assigned once, the video gain is not changed even if you operate the GAIN selector, until you press the button once more.</td>
</tr>
<tr>
<td>SHOCK-LESS GAIN</td>
<td>Turns shockless gain on or off.</td>
</tr>
</tbody>
</table>

Turn the MENU knob to select the gain value, and press MENU knob.

3

Repeat steps 2 and 3 until you have set all of the desired items.

Assigning functions to ASSIGN switches

You can assign the desired function to any of the ASSIGN switches.
(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)
1 Display the ASSIGNABLE page of the OPERATION menu, and press the MENU knob.

*For details on menu operations, see “Basic menu operations” on page 189.*

You can assign functions by using the following items.

### Item | Description
--- | ---
ASSIGN SW <1> | Assigns the function to ASSIGN 1 (push-type) switch.
ASSIGN SW <2> | Assigns the function to ASSIGN 2 (slide-type) switch.
ASSIGN SW <3> | Assigns the function to ASSIGN 3 (push-type) switch.
ASSIGN SW <4> | Assigns the function to ASSIGN 4 (push-type) switch.
ASSIGN SW <RET> | Assigns the function to RET button on the lens.
COLOR TEMP SW | Assigns the function to COLOR TEMP. button.

2 Select the desired switch or button, and press the MENU knob.

A selection screen for the selected switch or button appears. You can use these screens to assign one of the following functions.

#### Functions to be assigned to the ASSIGN 1/3/4 (push-type) switch, COLOR TEMP. button, or RET button on the lens

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Assigns no function.</td>
</tr>
<tr>
<td>FRONT MIC</td>

</tr>
<tr>
<td>PICTURE CACHE</td>
<td>Assigns execution of recording in picture cache mode.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Function</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUPER (VFDISP&amp; MENU)</td>
<td>Assigns a mixing switch function that selects mixing or no mixing of superimposed viewfinder and menu text data into the video signals output from the SDI OUT 2 or TEST OUT connector, when SDI OUT 2 SUPER or TEST OUT SUPER on the OUTPUT 1 page of the OPERATION menu are set to ON.</td>
</tr>
<tr>
<td>MARKER</td>
<td>Assigns the function that displays or hides all markers. a)</td>
</tr>
<tr>
<td>RETAKE b)</td>
<td>Assigns the function that deletes the last recorded clip.</td>
</tr>
<tr>
<td>ATW</td>
<td>Assigns the function that turns auto tracing white balance ON and OFF.</td>
</tr>
<tr>
<td>RETURN VIDEO</td>
<td>Assigns the function that displays in the viewfinder the HD-Y (1080i) signal input to the GENLOCK IN connector. c)</td>
</tr>
<tr>
<td>LENS RET</td>
<td>Assigns the functions executed by the RET button on the lens (recording review and so on).</td>
</tr>
<tr>
<td>REC SWITCH</td>
<td>Assigns the function that starts and stops recording.</td>
</tr>
<tr>
<td>TURBO SWITCH</td>
<td>Assigns the turbo gain function.</td>
</tr>
<tr>
<td>ZEBRA</td>
<td>Assigns the zebra pattern display function.</td>
</tr>
<tr>
<td>ZOOM TELE/ WIDE d)</td>
<td>For use with a lens that supports serial communications, assign the ZOOM TELE setting to ASSIGN 3, and the WIDE setting to ASSIGN 4.</td>
</tr>
<tr>
<td>ZOOM WIDE/ TELE d)</td>
<td>For use with a lens that supports serial communications, assign the ZOOM WIDE setting to ASSIGN 3, and the TELE setting to ASSIGN 4.</td>
</tr>
<tr>
<td>FREEZE MIX</td>
<td>Assigns the function that mixes a still picture (monochrome) and camera video (color) (effective for framing shots).</td>
</tr>
</tbody>
</table>
a) Even when the MARKER item is set to OFF on the MARKER page of the USER menu, the ASSIGN 1/3/4 switches allow you to display or not to display all markers.
b) This function cannot be assigned to the RET button on the lens.
c) Even if the RETURN VIDEO item is set to OFF on the ASSIGNABLE SW page of the OPERATION menu, you can use this switch to display the image of the return video signal on the viewfinder.
d) Only the Assign 3 SEL screen appears.
e) Video momentarily becomes black and audio is momentarily muted when the digital extender is switched.
f) This does not appear if nothing is assigned in the Assign menu.

**Functions to be assigned to the ASSIGN 2 (slide-type) switch**

<table>
<thead>
<tr>
<th>Function</th>
<th>Content</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Assigns no function.</td>
</tr>
<tr>
<td>FRONT MIC</td>
<td>Assigns the function that switches between stereo and monaural when a stereo microphone is connected.</td>
</tr>
<tr>
<td>PICTURE CACHE</td>
<td>Assigns execution of recording in picture cache mode.</td>
</tr>
<tr>
<td>DIGITAL EXTENDER X2 X3 X4</td>
<td>Assigns the function that electronically magnifies the central part of the picture (all video output is magnified, including recorded video). As each switch or button is pressed, the magnification changes in the order 2-times → 3-times → 4-times → OFF.</td>
</tr>
</tbody>
</table>
a) Even when the MARKER item is set to OFF on the MARKER page of the USER menu, the ASSIGN 2 switch allows you to display or not to display all markers.
b) The optional CBK-SC02 Analog Composite Input Board is required for VBS signal input. The optional CBK-HD01 HD/SD SDI Input Board is required for SD-SDI/HD-SDI signal input.
c) Video momentarily becomes black and audio is momentarily muted when the digital extender is switched.

d) This does not appear if nothing is assigned in the Assign menu.

**Note**

For functions that are assigned to the ASSIGN 2 (slide-type) switch, you cannot change those settings using other menus. The function assigned to the ASSIGN 2 switch takes precedence over the menu setting.

### 3 Select the desired function, and press the MENU knob.

The function is assigned, and the ASSIGNABLE SW page appears again.

#### Operation of the ASSIGN 1/2/3/4 switches when UA01 to UA10 are assigned

When an on/off switchable function (or menu item) is assigned to one of the ASSIGN 1/2/3/4 switches, each time the switch is pressed toggles the function on or off.

When another type of menu item is assigned, pressing the switch displays the item and its setting value on the viewfinder screen.

You can then change the setting by pressing and turning the MENU knob.

The viewfinder screen display disappears approximately three seconds after the last operation.

### Setting power saving functions

You can limit the function of some output connectors to save power consumption.

How to select an item in the menu screen: Turn the MENU knob to move ✦ to the desired item.)

#### 1 Display the POWER SAVE page of the OPERATION menu, and press the MENU knob.

*For details on menu operations, see “Basic menu operations” on page 189.*

#### 2 Select the desired item, and press the MENU knob.

You can set the following items on the POWER SAVE page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ETHERNET/USB</td>
<td>Enables or disables the network connector and USB connector.</td>
</tr>
</tbody>
</table>
Adjustments and Settings from Menus

Chapter 6  Menu Displays and Detailed Settings

a) The unit must be powered off and on again to enable changes to this setting.
b) Enabled only when VBS is selected using TEST OUT SELECT on the OUTPUT 1 page.

3 Turn the MENU knob to select the desired setting, and press the MENU knob.

4 Repeat steps 2 and 3 until you have set all of the desired items.

Setting up a wireless LAN

You can install the optional CBK-WA01 Wi-Fi adapter in this unit, and set up a wireless LAN as explained in this section.

When you connect this unit to a computer over a network, you can make the settings explained here from a Web menu. For details, refer to the operation manual supplied with the optional CBK-WA01 Wi-Fi adapter.

Notes

- The CBKZ-UPG01 Software Upgrade Key must be installed to make these settings.
- For information about connecting to a wireless LAN, refer to the operation manual supplied with the optional CBK-WA01 Wi-Fi adapter.
- Even when the optional CBK-WA01 Wi-Fi adapter is installed in this unit, the message “NO Wi-Fi ADAPTER!” may appear if you attempt to set up a wireless LAN immediately after powering the unit on. If this occurs, wait for a while and try again.

- If the message “IEEE802.1X IS ENABLED!” appears when you change the settings, execute NET CFG RESET on the NETWORK 2 page of the MAINTENANCE menu and then try again.
- The proxy data recording function is disabled automatically whenever you enable the wireless LAN connection function.

Before starting, set ETHERNET/USB and Wi-Fi on the POWER SAVE page of the OPERATION menu to “ENABL”.
(How to select an item in the menu screen: Turn the MENU knob to move ▲ to the desired item.)

1 Display the Wi-Fi page of the MAINTENANCE menu, and then press the MENU knob.

See “Basic menu operations” (page 189) for more information about menu operations.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>i.LINK(FAM) a)</td>
<td>Enables or disables the i.LINK connector (FAM function).</td>
</tr>
<tr>
<td>REC AUDIO OUT</td>
<td>Puts the AUDIO OUT connectors in EE or SAVE mode.</td>
</tr>
<tr>
<td>TEST OUT SAVE b)</td>
<td>Switches the TEST OUT connector power saving function on and off. ON: No signals are output if a cable is not connected. OFF: Signals are always output, regardless of whether a cable is connected.</td>
</tr>
<tr>
<td>Wi-Fi</td>
<td>Enables or disables the wireless LAN function.</td>
</tr>
</tbody>
</table>

a) The unit must be powered off and on again to enable changes to this setting.
b) Enabled only when VBS is selected using TEST OUT SELECT on the OUTPUT 1 page.

2 Select “Wi-Fi SETUP” and then press the MENU knob.
The screen changes to the Wi-Fi SETTING page.

3 Specify the connection destination (see the next section for how to specify it).

To specify a connection destination by automatic detection

1 On the Wi-Fi SETTING page, select “SCAN NETWORKS” and then press the MENU knob.
The screen changes to the NETWORKS page, and automatic detection of the connection destination starts. Several minutes may be required for network detection.

```
POON NETWORKS SCAN ESC

01. SSID:
  TYPE: ADHOC  LVL : 4
  MODE: 802.11b/g/n

02. SSID:
  TYPE: INFRA  LVL : 3
  MODE: 802.11b/g/n
```

This page displays the following network items.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSID</td>
<td>Network name</td>
</tr>
<tr>
<td>TYPE</td>
<td>Network connection mode</td>
</tr>
<tr>
<td></td>
<td>INFRA: Infrastructure mode</td>
</tr>
<tr>
<td></td>
<td>ADHOC: Ad hoc mode</td>
</tr>
<tr>
<td>LVL</td>
<td>Signal strength</td>
</tr>
<tr>
<td></td>
<td>0 (minimum) to 4 (maximum)</td>
</tr>
<tr>
<td>MODE</td>
<td>IEEE 802.11 standard</td>
</tr>
</tbody>
</table>

2. Select the desired access point or computer from the detected items, and then press the MENU knob.

You return to the Wi-Fi SETTING page. Check the various setting items.

To return to the Wi-Fi SETTING page
If you do not want to specify a connection destination on this page, or if no connection destination was detected, select “ESC” and then press the MENU knob to return to the Wi-Fi SETTING page.

To specify a connection destination manually

Specify the following items on the Wi-Fi SETTING page.

<table>
<thead>
<tr>
<th>Item name</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>SSID (network name)</td>
<td>Up to 32 alphanumeric characters or symbols</td>
</tr>
<tr>
<td>NETWORK TYPE (connection mode)</td>
<td>INFRA: Infrastructure mode</td>
</tr>
<tr>
<td></td>
<td>ADHOC: Ad hoc mode</td>
</tr>
<tr>
<td>CH (wireless channel)</td>
<td>1 to 11 (can be specified only in ad hoc mode)</td>
</tr>
<tr>
<td>AUTH (network authentication)</td>
<td>OPEN: Open system authentication</td>
</tr>
<tr>
<td></td>
<td>SHARED: Shared key authentication</td>
</tr>
<tr>
<td></td>
<td>WPA: WPA (Wi-Fi Protected Access) authentication</td>
</tr>
<tr>
<td></td>
<td>WPA2: WPA2 (Wi-Fi Protected Access 2) authentication</td>
</tr>
<tr>
<td>ENCRYPTION (data encryption)</td>
<td>DISABLE: Disable</td>
</tr>
<tr>
<td></td>
<td>WEP: WEP (Wired Equivalent Privacy) method</td>
</tr>
<tr>
<td></td>
<td>TKIP: TKIP (Temporal Key Integrity Protocol) method</td>
</tr>
<tr>
<td></td>
<td>AES: AES (Advanced Encryption Standard) method</td>
</tr>
</tbody>
</table>

Note

Some limitations apply to combinations of the “NETWORK TYPE”, “AUTH”, and “ENCRYPTION” settings.

To enter an SSID
Select SSID, press the MENU knob to display the Wi-Fi>SSID page, and then press the MENU knob again.

When you press the MENU knob once more, an ■ appears over the first character in the input string, and the unit enters character input mode.

```
wi-Fi>SSID RET
  ■SSID:?
```

See steps 3 and 4 in “Setting the shot ID” (page 201) for information about how to enter characters.
To set ENCRYPTION options
Depending on the setting of ENCRYPTION, you must set the following options.

**When ENCRYPTION is WEP:**

<table>
<thead>
<tr>
<th>Item name</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>WEP KEY INDEX</td>
<td>1 to 4</td>
</tr>
<tr>
<td>INPUT SELECT (network key</td>
<td>ASCII5: 5 characters ASCII format</td>
</tr>
<tr>
<td>and length)</td>
<td>ASCII13: 13 characters</td>
</tr>
<tr>
<td></td>
<td>ASCII format</td>
</tr>
<tr>
<td></td>
<td>HEX10: 10 hexadecimal</td>
</tr>
<tr>
<td></td>
<td>digits</td>
</tr>
<tr>
<td></td>
<td>HEX26: 26 hexadecimal</td>
</tr>
<tr>
<td></td>
<td>digits</td>
</tr>
<tr>
<td>KEY (network key)</td>
<td>ASCII characters or</td>
</tr>
<tr>
<td></td>
<td>hexadecimal number (</td>
</tr>
<tr>
<td></td>
<td>format specified with</td>
</tr>
<tr>
<td></td>
<td>INPUT SELECT)</td>
</tr>
</tbody>
</table>

**When ENCRYPTION is TKIP or AES:**

<table>
<thead>
<tr>
<th>Item name</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>INPUT SELECT (network key</td>
<td>ASCII8-63: 63 characters</td>
</tr>
<tr>
<td>and length)</td>
<td>ASCII 8-bit format</td>
</tr>
<tr>
<td></td>
<td>HEX64: 64 hexadecimal</td>
</tr>
<tr>
<td></td>
<td>digits</td>
</tr>
<tr>
<td>KEY (network key)</td>
<td>ASCII characters or</td>
</tr>
<tr>
<td></td>
<td>hexadecimal number (</td>
</tr>
<tr>
<td></td>
<td>format specified with</td>
</tr>
<tr>
<td></td>
<td>INPUT SELECT)</td>
</tr>
</tbody>
</table>

See steps 3 and 4 in “Setting the shot ID” (page 201) for information about how to enter the key.

To specify a connection destination by WPS operations

In infrastructure mode only, you can use WPS (Wi-Fi Protected Setup) to specify a connection destination (access point) semi-automatically.

**Notes**

- WPS does not support the following.
  - Ad hoc mode
  - IEEE 802.1x
- The access point must support WPS.
- In addition to the settings made here, you must also make network settings on the NETWORK page of the MAINTENANCE menu.

(How to select an item in the menu screen: Turn the MENU knob to move ● to the desired item.)

1. Display the WPS page of the MAINTENANCE menu and then press the MENU knob.
   See “Basic menu operations” (page 189) for more information about menu operations.

2. Select “ENABLE” and then press the MENU knob.
   The screen changes to the operation screen.

3. Set WPS MODE to one of the following.
   ONE PUSH: Connect using the one push method
   PIN CODE: Connect using the PIN code entry method.

   **When you select “PIN CODE”**
   A PIN item appears. Execute “UPDATE” in that item to display a PIN code for this unit.

4. Select “WPS START” and then press the MENU knob.
   WPS setup starts. During execution, the progress and results appear after WPS STATUS.
   SCANNING: Scanning for an access point
   OK: Detection successful
   NG: Detection failed

   When execution finishes, the screen changes to the ACCESS PNT page.

5. Select the desired connection destination from the detected access points, and then press the MENU knob.

**Setting the color temperature manually**

You can manually adjust the value of the white balance by setting the color temperature.
(How to select an item in the menu screen: Turn the MENU knob to move ● to the desired item.)
1 Display the WHITE page of the PAINT menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 Select the desired item, and press the MENU knob.

You can set the following items on the WHITE page.

3 Turn the MENU knob to change the setting, and press the MENU knob.

4 Repeat steps 2 and 3 until you have set all of the desired items.

### Specifying an offset for the auto white balance setting

By setting an offset for the value of auto white balance, you can make the picture warmer or colder.

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the OFFSET WHT page of the OPERATION menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 Select the desired item, and press the MENU knob.

You can set the following items in the OFFSET WHT page.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFFSET WHITE &lt;A&gt;</td>
<td>When this item is set to ON, the offset adjusted on this page is added to the white balance for channel A.</td>
</tr>
<tr>
<td>WARM-COOL &lt;A&gt;</td>
<td>When OFFSET WHITE &lt;A&gt; is “ON”, sets the offset for the white balance of channel A, using the color temperature. Adjust the value while looking at the real image because error tends to be bigger for adjustment of high color temperature.</td>
</tr>
<tr>
<td>WARM-COOL BAL &lt;A&gt;</td>
<td>Adjusts the value more precisely if the adjustment by WARM-COOL &lt;A&gt; is not satisfactory.</td>
</tr>
<tr>
<td>OFFSET WHITE &lt;B&gt;</td>
<td>When this item is set to ON, the offset adjusted on this page is added to the white balance for channel B.</td>
</tr>
<tr>
<td>WARM-COOL &lt;B&gt;</td>
<td>When OFFSET WHITE &lt;B&gt; is “ON”, sets the offset for the white balance of channel B, using the color temperature. Adjust the value while looking at the real image because error tends to be bigger for adjustment of high color temperature.</td>
</tr>
<tr>
<td>WARM-COOL BAL &lt;B&gt;</td>
<td>Adjusts the value more precisely if the adjustment by WARM-COOL &lt;B&gt; is not satisfactory.</td>
</tr>
</tbody>
</table>

3 Set the WHITE BAL switch to the channel (A or B) that you want to set.

**Note**
If the WHITE BAL switch is not set to A or B, the adjusted value is not reflected in the video output even though you carry out the following operation.

4 Turn the MENU knob to change the setting, and press the MENU knob.
If you want to set the other channel, go back to step 2.
Selecting the lens file

The LENS FILE page of the USER menu allows you to change the lens file according to the lens in use.

(How to select an item in the menu screen: Turn the MENU knob to move • to the desired item.)

1 Display the LENS FILE page of the USER menu, and press the MENU knob.
   For details on menu operations, see “Basic menu operations” on page 189.

The LENS FILE page shows the name (F.ID) of the currently selected lens file.
The lens name (L.ID) and manufacturer (L.MF) appear when a lens that supports serial communications is mounted.

2 Select LENS FILE SELECT, and press the MENU knob.

3 Turn the MENU knob to change the setting, and press the MENU knob.

Setting the UMID data

What is a UMID?

The UMID (Unique Material Identifier) is a unique identifier for audio-visual material defined by the SMPTE330M-2004 standard. The UMID may be used either as the 32-byte Basic UMID or as the Extended UMID, which includes an additional 32 bytes of Source Pack to make a total 64 bytes.

For details, refer to SMPTE 330M.

Globally unique ID is automatically recorded in clip units.

The Extended UMID is metadata that provides additional information such as location, time/date, company and so on.

Using the Extended UMID

You have to enter a country code, organization code and user code. Set the country code referring to the ISO 3166 table, and set the organization code and user code independently.

For details, see “About UMID ownership information” (page 213).

Functions of UMID data

The UMID data enables the followings:

- Add a globally unique ID to every clip of audio-visual material. The unique ID is used to detect the material source and to link it with the original source material.
- Distinguishing between original material and copied material. 00 is added to the Instance Number for original material.
- Recording based on the UTC. The UTC is used when recording the UMID. This enables uniform control of source material recorded all over the world based on the universal timecode.
- Calculating the date difference among source materials. The source material is recorded based on the MJD (Modified Julian Date), which enables easy calculation of date difference among source materials.

To set UMID ownership information

(How to select an item in the menu screen: Turn the MENU knob to move • to the desired item.)

1 Display the UMID SET page of the OPERATION menu, and press the MENU knob.
   For details on menu operations, see “Basic menu operations” on page 189.

2 Set the following item.

<table>
<thead>
<tr>
<th>Item</th>
<th>Contents</th>
</tr>
</thead>
<tbody>
<tr>
<td>COUNTRY CODE</td>
<td>Country code</td>
</tr>
<tr>
<td>ORGANIZATION</td>
<td>Organization code</td>
</tr>
<tr>
<td>USER CODE</td>
<td>User code</td>
</tr>
<tr>
<td>TIME ZONE</td>
<td>Time difference from UTC</td>
</tr>
</tbody>
</table>

For details on how to enter characters, see “Setting the shot ID” (page 201).

3 Press the MENU knob.
About UMID ownership information

COUNTRY CODE
Enter an abbreviated alphanumeric string (4-byte alphanumeric strings) according to the values defined in ISO 3166-1.
There are about 240 country codes.
Find your own country code on the following home page.
Refer to ISO 3166-1:
http://www.iso.org/iso/country-codes/iso_3166_code_lists.htm

When the country code is less than 4 bytes, the active part of the code will occupy the first part of the 4-bytes and the remainder must be filled with the space character (20h).

Example: In the case of Japan
For Japan, if the country code is JP, it is 2 bytes, if JPN, it is 3 bytes.
Thus, enter the following:
JP__
or
JPN__
where _ represents a space.

ORGANIZATION (organization code)
Enter an abbreviated 4-byte alphanumeric string for the organization code.

Notes
• Organization codes must be acquired by applying to the SMPTE registration office.
  When no organization code has been acquired, it is forbidden to enter an arbitrary string. As a rule, the code "00" must be entered. Freelance operators who do not belong to an origination should enter "~".
• There are no problems in recording or playing back audio-video signals, if ORGANIZATION is not set.

USER CODE
Enter the 4-byte alphanumeric strings for user identification.
The user code is registered with each organization locally. It is usually not centrally registered.
When the country code is less than 4 bytes, enter the country code from the beginning of the 4 bytes and enter the space character (20h) in the remaining strings.
This user code is determined by the organization. The methods used depend on the organization.

Note
User code cannot be entered when no organization code has been entered.

TIME ZONE
Set the time difference from UTC.

Notes
• The UTC is calculated based on the local time, using the time zone. If the time zone is not set, the UTC is not recorded correctly.
• When you change the time zone, adjust the internal clock to local time and turn the power of the camcorder off and then the power on again.
Handling the “Memory Stick”

The “Memory Stick” can be inserted to or removed from the camcorder with the power turned on or off.

“Memory Sticks” usable with this camcorder

With this camcorder, you can use a Sony “Memory Stick”, “Memory Stick Duo”, “Memory Stick PRO” whose capacity does not exceed 4 GB, and “Memory Stick PRO Duo”. For details, see “About a “Memory Stick”” on page 267.

Inserting a “Memory Stick”

1 Open the cover of the menu operating section.

2 Hold the “Memory Stick” with the notch facing downward and the arrow facing away from you, and insert the “Memory Stick” into the “Memory Stick” slot until it clicks into place. Then close the cover.

Note

If it does not fit into the slot properly or if there is some resistance when you insert it, the “Memory Stick” may be turned around or upside down. Do not force the “Memory Stick” into the slot. Confirm the direction of the notch and arrow on the “Memory Stick” before inserting the “Memory Stick” and then try inserting it again.

To remove the “Memory Stick”

1 Check that the access indicator is not lit, then gently press in the “Memory Stick” once and release. The “Memory Stick” pops out.

2 Pull the “Memory Stick” towards you to withdraw it from the slot.

Note

Do not remove the “Memory Stick” while the access indicator is lit. You may lose data, or damage the “Memory Stick”.

To protect saved data

To prevent accidental erasure of important setup data, slide the LOCK switch on the “Memory Stick” right to the write protect position.

It is now impossible to write or delete data on the “Memory Stick”. If you try to do so, the message “MEMORY STICK LOCKED” appears and the data cannot be overwritten or deleted.

Note

“Memory Stick Duo” and “Memory Stick PRO Duo” do not have this function.

To format a “Memory Stick”

Note

Do not format the “Memory Stick” using a PC.
Saving and Recalling User Files

The camcorder is equipped with a “Memory Stick” slot, which enables you to save the settings in the USER menu as a user file onto the “Memory Stick”. You can load these files from the “Memory Stick” for immediate recall of a particular setting configuration.

In addition to user files, you can save scene files, reference files, lens files and ALL files in a “Memory Stick”.

When a menu is displayed, inserting a “Memory Stick” displays the appropriate file-related menu page automatically.

Saving user menu data to the “Memory Stick”

You can save USER menu settings held in the camcorder as user files in the “Memory Stick”. You can save up to 100 user files in the “Memory Stick”.

Insert the “Memory Stick” then proceed as follows.
(How to select an item in the menu screen: Turn the MENU knob to move ⇧ to the desired item.)

1 Display the USER FILE page of the FILE menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

To set a file ID for the data to be saved
Set the file ID before going to step 2.

For details on setting the file ID, see “To set the file ID” on page 216.
2 Select USER FILE SAVE, and press the MENU knob.
The USER SAVE page appears.
Up to 20 pages, from P00 to P19, can be used to save user files to the “Memory Stick”.
Each page can hold up to five files.

3 Turn the MENU knob until the page which contains the desired file number appears, and press the MENU knob.

4 Select the desired file number, and press the MENU knob.
The message “SAVE OK? YES NO” appears.
If a file number is followed by “NEW FILE”, this means that the file is empty. If data is stored in the file, the file number is followed by the file name.

5 To carry out the save, select YES and press the MENU knob.
To cancel, press the MENU knob leaving pointing to NO.

The access indicator lights. When the saving is completed, the message “COMPLETE” appears and the access indicator goes off.

If no “Memory Stick” has been inserted
The message “NO MEMORY STICK” will appear. Insert a “Memory Stick” and carry out the operation once again.

If you select a file number where data has already been saved
The message “OVERWRITE OK? YES NO” appears.
• To stop overwriting, press the MENU knob leaving pointing to NO.
• To overwrite, select YES and press the MENU knob.

You can select the information displayed on each USER SAVE or USER LOAD page.
For details, see “To select the file information items to be displayed” on page 217.

About the USER menu settings to be saved in the “Memory Stick”
Settings for items on all pages of the USER menu are saved in the “Memory Stick” as a user file.

Note
The following items cannot be saved.
• LOAD CUSTOM DATA, LOAD OUT OF USER, BEFORE FILE PAGE, and USER LOAD WHITE on the USER FILE 2 page
• SCENE WHITE DATA on the REFERENCE page
• LENS FILE SELECT on the LENS FILE page
• SYSTEM FREQUENCY and COUNTRY on the FORMAT page
• NUMERIC on the CLIP TITLE page
• SKIN AREA IND and SKIN DTL SELECT on the SKIN DETAIL page
• MATRIX AREA IND and MTX(MULTI) AXIS on the MTX MULTI page

If data cannot be saved
If one of the following error messages appears during or after the save operation, then the data was not saved.

<table>
<thead>
<tr>
<th>Error message</th>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO MEMORY STICK (flashing)</td>
<td>No “Memory Stick” is inserted.</td>
<td>Insert or reinsert the “Memory Stick”.</td>
</tr>
<tr>
<td>MEMORY STICK LOCKED</td>
<td>The LOCK switch on the “Memory Stick” is set to the write protect position.</td>
<td>Set the LOCK switch to the write enable position.</td>
</tr>
<tr>
<td>MEMORY STICK ERROR (flashing)</td>
<td>Circuit or “Memory Stick” fault.</td>
<td>Recheck and consult a Sony service representative.</td>
</tr>
</tbody>
</table>

To set the file ID
You can set an file ID before you save your data as a user file. This will help you identify the user file quickly. The file ID that has been set is saved together with the data.

Set the file ID before saving data in the “Memory Stick”. Otherwise, the file ID is not saved with the other data.

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the USER FILE page of the FILE menu.
For details on menu operations, see “Basic menu operations” on page 189.
2 Select F. ID, and press the MENU knob. A character table appears.

3 Follow steps 3 and 4 described in “Setting the shot ID” on page 201 to enter characters.

4 When you have finished entering the file ID, turn the MENU knob to move to END, and press the MENU knob. The entered file ID is now displayed.

When you carry out a user file save operation (see page 215), the set file ID is saved to the “Memory Stick” together with the data.

To select the file information items to be displayed

You can select the user file information items to be displayed on the USER FILE SAVE page and USER FILE LOAD page (P00 to P19), that are the pages used to save and call up the data to and from “Memory Stick”.

1 Display a USER FILE LOAD page or USER FILE SAVE page of the USER FILE menu, and press the MENU knob. For details on menu operations, see “Basic menu operations” on page 189.

2 Select DISPLAY MODE, and press the MENU knob.

3 Select the desired type of file information, and press the MENU knob.

<table>
<thead>
<tr>
<th>Display type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ALL</td>
<td>File ID (10 characters) and date (year/month/day)</td>
</tr>
<tr>
<td>F.ID</td>
<td>File ID (16 characters)</td>
</tr>
<tr>
<td>DATE</td>
<td>Date saved (year/month/day/hours/minutes/seconds)</td>
</tr>
<tr>
<td>MODEL</td>
<td>Information on the model</td>
</tr>
</tbody>
</table>

Loading saved data from a “Memory Stick”

Note

The data loaded from the “Memory Stick” overwrites the data saved in the camcorder.

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the USER FILE page of the FILE menu, and press the MENU knob. For details on menu operations, see “Basic menu operations” on page 189.

2 Select USER FILE LOAD, and press the MENU knob. The USER LOAD page appears.

3 Turn the MENU knob until the page which contains the desired file number appears, then press the MENU knob.

4 Select the desired file number, and press the MENU knob. The message “LOAD OK? YES ◄ NO” appears.

5 To carry out the load, select YES and press the MENU knob. To cancel, press the MENU knob leaving ◄ pointing to NO.

The access indicator lights. When the load is completed, the message “COMPLETE” appears and the access indicator goes off.
If data cannot be loaded
If one of the following error messages appears during or after the load operation, then the data was not loaded.

<table>
<thead>
<tr>
<th>Error message</th>
<th>Cause</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>NO</td>
<td>No “Memory Stick” is inserted.</td>
<td>Insert or reinsert the “Memory Stick”.</td>
</tr>
<tr>
<td>MEMORY STICK (flashing)</td>
<td>Circuit or “Memory Stick” fault.</td>
<td>Recheck, and consult a Sony service representative.</td>
</tr>
<tr>
<td>FILE ERROR (flashing)</td>
<td>The “Memory Stick” contains data that cannot be loaded into this camcorder.</td>
<td>Data saved to a “Memory Stick” using a camcorder whose model is not the same as this camcorder cannot be loaded into this camcorder.</td>
</tr>
</tbody>
</table>

---

Saving and Loading Scene Files

You can save various settings for shooting a particular scene as a scene file. By loading the scene file, you can quickly recreate setup conditions suitable for the scene. You can save up to five scene files in the camcorder memory and up to 100 scene files in a “Memory Stick”. You can also load data from the “Memory Stick” into the camcorder memory.

Data that can be saved in a scene file
You can save the following data in a scene file:
- Values adjusted using the PAINT menu
- Shutter speed settings made in the standard mode and ECS mode
- The white balance data included in a scene file depends on the SCENE WHITE DATA setting on the REFERENCE page of the FILE menu.

Saving a scene file

To save a scene file to the “Memory Stick”, insert the “Memory Stick” into the “Memory Stick” slot before starting the following operation. (How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1. Display the SCENE FILE page of the FILE menu, and press the MENU knob.
   
   For details on menu operations, see “Basic menu operations” on page 189.

2. Select USER PRESET, and press the MENU knob.

   For details on setting the file ID, see “To set the file ID” on page 216.

---

Returning the user file settings to the standard settings

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1. Display the USER FILE page of the FILE menu, and press the MENU knob.
   
   For details on menu operations, see “Basic menu operations” on page 189.

2. Select USER PRESET, and press the MENU knob.

To set a file ID for the data to be saved
Set the file ID before going to step 2.

For details on setting the file ID, see “To set the file ID” on page 216.
2 Select SCENE STORE, and press the MENU knob.
The SCENE STORE page appears.

3 Press the MENU knob, then select the desired file number, and press the MENU knob again.
The file to be saved is selected.

When no “Memory Stick” is inserted
Select the desired memory number, and press the MENU knob.
When the save is completed, the SCENE FILE page appears again.

When you select a file number where data has already been saved
The message “OVERWRITE OK? YES ➤ NO” appears.
- To cancel the overwriting, press the MENU knob leaving ➤ pointing to NO.
- To overwrite, select YES and press the MENU knob.

When a “Memory Stick” is inserted
You can use up to 20 pages, from P01 to P20, to save scene files in the “Memory Stick”. Each page can hold up to five files.

1 Turn the MENU knob until the page which contains the desired file number appears, then press the MENU knob.
2 Select the desired file number, and press the MENU knob.
The message “STORE OK? YES ➤ NO” appears.
3 To carry out the save, select YES and press the MENU knob.
To cancel, press the MENU knob leaving ➤ pointing to NO.

You can select the file information items to be displayed on each page of SCENE STORE and SCENE RECALL.
For details, see “To select the file information items to be displayed” on page 217.

To save scene files stored in the camcorder memory to the “Memory Stick”
The five scene files stored in the camcorder memory can be saved to the “Memory Stick” all in a single operation.

1 Display the SCENE FILE page of the FILE menu, and press the MENU knob.
   For details on menu operations, see “Basic menu operations” on page 189.

2 Select SCENE STORE, and press the MENU knob.
One of the SCENE STORE pages appears.

3 Turn the MENU knob to select the desired SCENE STORE page, and press the MENU knob.

4 Select 5FILE SAVE ➤ MEM1-5, and press the MENU knob.
The message “STORE OK? YES ➤ NO” appears.

5 To carry out the save, select YES and press the MENU knob.
To cancel, press the MENU knob leaving ➤ pointing to NO.

When the save is completed, the message “COMPLETE” appears.

Note
If files have been saved in the page selected in step 3, those files are replaced with files loaded from the camcorder memory. For example, files from 001 to 005 are replaced by the above procedure.

To set the file ID
You can set an file ID before you save your data as a scene file. This will help you identify the scene file quickly. The file ID that has been set is saved together with the data.

You can carry out a scene file ID setting operation on the SCENE FILE page of the FILE menu.
For details about this operation, see the description of step 2 and following of “To set the file ID” on page 216.
To select the file information items to be displayed

You can select the items of file information to be displayed on the SCENE STORE pages (P01 to P20) or the SCENE RECALL pages (P01 to P20) used for saving data to or loading data from a “Memory Stick”.

You can select the scene file information items to be displayed on the SCENE STORE page and SCENE RECALL page of the SCENE FILE menu.

For details about item selection, see the description of step 2 and following of “To select the file information items to be displayed” on page 217.

Loading scene files

(How to select an item in the menu screen: Turn the MENU knob to move ☰ to the desired item.)

1 Display the SCENE FILE page of the FILE menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 To load the scene file stored in the camcorder, select the desired file number, and press the MENU knob.

☐ on the left of the file number changes to □. The camcorder is set up according to the loaded scene file.

<table>
<thead>
<tr>
<th>File Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>SCENE 25</td>
</tr>
<tr>
<td>2</td>
<td>SCENE 26</td>
</tr>
<tr>
<td>3</td>
<td>SCENE 27</td>
</tr>
<tr>
<td>4</td>
<td>SCENE 28</td>
</tr>
<tr>
<td>5</td>
<td>NO FILE</td>
</tr>
</tbody>
</table>

When DISP SCENE FILE on the VF DISP 3 page of the OPERATION menu is set to “ON”, the number of the currently loaded scene file is displayed on the viewfinder screen (see page 31).

To cancel the selected scene file

Turn the MENU knob to move ☰ to □, and press the MENU knob again. □ changes to ☐. The camcorder returns to the settings before selecting this scene file.

To load a scene file saved in the “Memory Stick”

① Select SCENE RECALL, and press the MENU knob.

The SCENE RECALL page appears.

② Turn the MENU knob until the page which contains the desired file number appears, then press the MENU knob.

③ Select the desired file number, and press the MENU knob.

The message “RECALL OK? YES ☰ NO” appears.

3 To carry out the recall, select YES and press the MENU knob.

To cancel, press the MENU knob leaving ☰ pointing to NO.

When the loading is completed, the message “COMPLETE” appears. The camcorder is set up according to the loaded scene file. If no file is present with a particular file number, this is shown as “NO FILE”.

To load scene files from the “Memory Stick” into the camcorder memory

You can load up to five scene files stored in the “Memory Stick” into the camcorder memory all in a single operation.

(How to select an item in the menu screen: Turn the MENU knob to move ☰ to the desired item.)

1 Display the SCENE FILE page of the FILE menu, and press the MENU knob.

For details on menu operations, see “Basic menu operations” on page 189.

2 Select SCENE RECALL, and press the MENU knob.

The SCENE RECALL page appears.

3 Turn the MENU knob until the SCENE RECALL page which contains the desired scene files appears, and press the MENU knob.

4 Select 5FILE LOAD ☰ MEM1-5, and press the MENU knob.

The message “RECALL OK? YES ☰ NO” appears.
5 To carry out the load (recall), select YES and press the MENU knob.
To cancel, press the MENU knob leaving pointer to NO.

When loading is complete, the message “COMPLETE” appears and the access indicator goes off.

Notes
- The scene files loaded from the “Memory Stick” overwrite data saved in the camcorder memory.
- To load the scene file saved in the camcorder memory when the “Memory Stick” is inserted, return to the P00 SCENE RECALL page and load the desired scene file in the camcorder memory.
- When there is no file to be loaded (shown as “NO FILE”), an existing file of the same number is unaffected. In the example shown in step 4, MEM3 is not overwritten.

Returning the scene file settings to the standard settings
(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the SCENE FILE page of the FILE menu, and press the MENU knob.
   For details on menu operations, see “Basic menu operations” on page 189.

2 Select STANDARD, and press the MENU knob.
   displayed on the left of STANDARD changes to . When changes to once again, the settings of the camcorder are reset to the standard settings.

   If you press the MENU knob again while is displayed, the operation is cancelled and the camcorder returns to the settings before STANDARD was selected.

Jumping to a File-Related Menu Page When Inserting a “Memory Stick”

A “Memory Stick” enables you to save user files, scene files, lens files, reference files and ALL files.
The camcorder menu system allows you to make a setting so that when a “Memory Stick” holding these files is inserted while in menu operating mode, a menu page relating to the desired file is automatically displayed on the screen. Thus you can proceed to file operation quickly. This is very convenient especially when you manage data files using “Memory Stick”s.

(How to select an item in the menu screen: Turn the MENU knob to move to the desired item.)

1 Display the MEMORY STICK page of the FILE menu, and press the MENU knob.
   For details on menu operations, see “Basic menu operations” on page 189.

2 Select MS IN > JUMP TO, and press the MENU knob.
The MS IN > JUMP TO page allows you to select one of the following settings.

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>Disables this function. Menu pages do not change when a “Memory Stick” is inserted.</td>
</tr>
<tr>
<td>USER</td>
<td>Jumps to the USER FILE page.</td>
</tr>
<tr>
<td>ALL</td>
<td>Jumps to the ALL FILE page.</td>
</tr>
<tr>
<td>SCENE</td>
<td>Jumps to the SCENE FILE page.</td>
</tr>
<tr>
<td>LENS</td>
<td>Jumps to the LENS FILE 1 page.</td>
</tr>
<tr>
<td>REFER</td>
<td>Jumps to the REFERENCE page.</td>
</tr>
<tr>
<td>USER 1</td>
<td>Jumps to the USER 1 FILE page.</td>
</tr>
</tbody>
</table>

3 Turn the MENU knob until the name of the desired file page appears, then press the MENU knob.

Note
In the following cases, jumping to the target page is impossible.
- When the power is turned on after you insert a “Memory Stick”.
- When OFF is selected on the MS IN > JUMP TO page.
• When any of the following menu pages is already displayed.
  - A file-related page such as the USER FILE page of the FILE menu
  - MEMORY STICK, ALL FILE, SCENE FILE, LENS FILE, REFERENCE or ROM VERSION page
Overview

A remote computer can be connected to this unit and used to operate on recorded data which has been saved in data files, such as video and audio data files.

There are two ways to connect a remote computer.

- **FAM connection**
  Connect the (i.LINK) S400 connector on this unit to the i.LINK (IEEE1394) connector on the remote computer, using an i.LINK cable (see page 229).

- **FTP connection**
  Connect the network connectors on this unit and the remote computer, using a network cable (see page 233).

**Directory structure**

The following figure shows the directory structure of discs visible to a remote computer.

**Note**

This structure is not the same as the actual structure recorded on the disc.

---

(Continued)

a) Root directory
b) Only when NAMING FORM on the FILE NAMING page of the OPERATION menu is set to FREE
c) Files generated when voice over editing is executed on the PDW-HR1.
This section explains which operations are possible on files stored in each directory. When required, the following operation tables distinguish reading and writing from partial reading and writing.

**Read**: Read data sequentially from the start to the end of the file.

**Partial read**: Read only a part of the data in the file.

**Write**: Write data sequentially from the start to the end of the file.

**Partial write**: Write data to a part of the file only.

**Note**
Operations other than Read and Partial read are possible only when the Write Inhibit tab of the disc is set to recording enabled.

### Root directory

<table>
<thead>
<tr>
<th>File name</th>
<th>Content</th>
<th>Operations</th>
</tr>
</thead>
<tbody>
<tr>
<td>INDEX.XML</td>
<td>Contains data for management of the material on the disc.</td>

   a) The “E*” part can be changed to a user-defined name.
   b) Only files which can be written by XDCAM. Partial writing is not possible.
   c) Only when NAMING FORM on the FILE NAMING page of the OPERATION menu is set to FREE.
   d) Only files which can be written by XDCAM.
   e) When the “E*” part of a E*E01.SMI is changed, an E*M01.XML file with the same name in the “E*” part is also changed automatically.
   f) When an E*E01.SMI file is created, an E*M01.XML file with the same name in the “E*” part is also generated automatically.
   g) When an E*E01.SMI file is deleted, an E*M01.XML file with the same name in the “E*” part is also deleted automatically.

**Note**
Directories cannot be created in the Edit directory.
### Sub directory

<table>
<thead>
<tr>
<th>File name</th>
<th>Content</th>
<th>Operations</th>
</tr>
</thead>
<tbody>
<tr>
<td>C*S01.MXF a)</td>
<td>Proxy AV data (MXF file) generated automatically when a C*.MXF file is created. *: 0001 to 9999</td>
<td>Yes No No b) No c) No d)</td>
</tr>
</tbody>
</table>

Other files: Files other than the above - No - No -

a) The “C*” part can be changed to a user-defined name.
b) When the “C*” part of a C*.MXF file name is changed, a C*S01.MXF file with the same name in the “C*” part is generated automatically.
c) When a C*.MXF file is created, a C*S01.MXF file with the same name in the “C*” part is generated automatically.
d) When a C*.MXF file is deleted, the C*S01.MXF file with the same name in the “C*” part is also deleted automatically.

Note: Directories cannot be created in the Sub directory.

### UserData directory

<table>
<thead>
<tr>
<th>File name</th>
<th>Content</th>
<th>Operations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any file</td>
<td>a) UTF-8 file names can be up to 63 bytes in length. (Depending on the character type, file names (including extension) may be limited to 21 characters.)</td>
<td>Yes Yes Yes a) Yes Yes</td>
</tr>
</tbody>
</table>

The following directory operations are possible in the UserData directory.
- Directory creation (up to 62 levels, including the UserData directory)
- Deletion and renaming of directories

### General directory

<table>
<thead>
<tr>
<th>File name</th>
<th>Content</th>
<th>Operations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any file</td>
<td>a) UTF-8 file names can be up to 63 bytes in length. (Depending on the character type, file names (including extension) may be limited to 21 characters.)</td>
<td>Yes Yes Yes a) Yes Yes</td>
</tr>
</tbody>
</table>

The following directory operations are possible in the General directory.
- Directory creation (up to 63 levels, including the General directory)
- Deletion and renaming of directories

Notes:
- The maximum number of files that can be created on one disc, including directories, is 5,000 for a single-layer disc and 6,000 for a dual-layer disc.
- File names and directory names can use letters, numbers, and symbols from the Unicode 2.0 (UTF-8) character set. 1)
  However, the following control characters and symbols cannot be used.
  - Control characters: U+0000 to U+001F, U+007F
  - Symbols: "", ", , <, >, ?, \

1)
- To create a new directory in the General directory, first create a directory on the desktop and rename it using only characters that can be used on this unit. Then drag it from the desktop and drop it in the General directory.

1) The following character codes cannot be used by FAM connections.
   U+010000, U+020000, U+030000, U+040000,
   U+050000, U+060000, U+070000, U+080000,
   U+090000, U+0A0000, U+0B0000, U+0C0000,
   U+0D0000, U+0E0000, U+0F0000, U+100000

**PROAV directory**

This directory displays individual files on the disc.
To enable display of the PROAV directory, set PROAV DISPLAY on the CAM CONFIG 1 page of the MAINTENANCE menu to “ENABL”.

---

Chapter 8 File Operations
File Operations in File Access Mode (for Windows)

File access mode operating environment

Operating system requirements for file operations by file access mode (called FAM below) are as follows.

Computer operating system: Microsoft
- Windows XP Professional SP3 or higher,
- Microsoft Windows Vista Business/Ultimate (32 bit/64 bit) SP2 or higher, or Microsoft
- Windows 7 Professional/Ultimate (32 bit/64 bit)

Preparations
Install the FAM driver on the remote computer.

To install the FAM driver
Insert the (supplied) application software CD-ROM into the CD-ROM drive of your computer, navigate to the FAM Driver directory, and run the installer in the directory for your operating system, then follow the installation instructions.

Note
Use Version 2.10 or higher of the FAM driver. The FAM driver on the supplied CD-ROM is Version 2.10 or higher.
If a FAM driver is already installed on your computer, check the version (see the next section).

To check the FAM driver version
For Windows XP:
Select Control Panel > Add or Remove Programs > ProDisc, and click on “Click here for support information.”

For Windows Vista:
(1) Select Control Panel > Programs, open the Programs and Features window, right click in the window’s header bar (including the Name, Publisher, and other headers), and select Others...
(2) In the Choose Details dialog, check the Version check box and click OK. The Version column is displayed, allowing you to check the version of ProDisc.

For Windows 7:
Open “Programs and Features” in the control panel, and then check the version of “ProDisc”.

To enable FAM connections over the i.LINK connector
(How to select an item in the menu screen: Turn the MENU knob to move  to the desired item.)

1 Turn the MENU knob to scroll to the POWER SAVE page of the OPERATION menu, then press the MENU knob.

   For details on menu operations, see “Basic menu operations” on page 189.

   | U0?POWER SAVE | TOP |
   | ETHERNET/USB   | DSABL |
   | iLINK(FAM)     | DSABL |
   | REC AUDIO OUT  | EE    |
   | TEST OUT SAVE  | ON    |
   | Wi-Fi          | DSABL |

2 Move  to i.LINK(FAM) then press the MENU knob.

3 Turn the MENU knob to select “ENABL”, then press the MENU knob.
The message “Valid after power off.” appears.

4 Power the camcorder off, and then power it on again.
The setting made in step 3 is enabled.

Making FAM connections

1 Insert a disc into this unit, and put this unit into the following state.
Recording, playback, search and other disc operations: Stopped
THUMBNAIL indicator: Off
Disc access by clip deletion, disc formatting, or other operation: Stopped
Picture Cache function and Interval Rec function: Off
Connections between this unit and a computer by the Live Logging function: Disconnected
Setting of LIVE LOGGING on the REC FUNCTION page of the OPERATION menu: Values other than VIEW (OFF or LIVE)
MENU ON/OFF switch: OFF
Unsaved current clip list: Save or clear

2 If this unit is connected to a remote computer by FTP, log out from the FTP session (see page 234).

3 Connect the (i.LINK) S400 connector on this unit to the i.LINK (IEEE1394) connector on the remote computer, using an i.LINK cable.
Windows recognizes this unit as a removable disc, and displays one of the following icons on the remote computer’s taskbar:

- Windows XP: 
- Windows Vista or Windows 7: 

The remote computer is now able to perform file operations when a disc is inserted into this unit.

You will not be able to log in if you put the unit into the state described in step 1 after connecting the cable. To log in, disconnect the cable, put the unit into the state described in step 1, and connect it again.

When you make your first FAM connection
The Found New Hardware Wizard dialog appears when you connect this unit to your computer. Select “Install the software automatically (Recommended)”, and then click the Next button. Click the Finish button when the software installation finishes.

Operation limitations during FAM connections
- With the exception of the EJECT button, recording buttons and playback control buttons are disabled.
- VDR of this unit cannot be controlled from devices connected to the REMOTE connector (8-pin) and (i.LINK) S400 connector.

You can operate in the same way that you operate on local drives and files on network computers.

Notes
- If you power this unit off during a FAM connection, the data transferred thus far is discarded.
- All file operations are not possible for some types of files.

For details, see “File operation restrictions” (page 224).

To eject discs from a remote computer
Right click the icon representing this unit in Explorer, and select Eject from the menu which appears.

Exiting file operations

For Windows XP or Windows Vista

Note
Do not disconnect the cable before performing steps 1 to 3.

1 Do one of the following on the or icon displayed in the remote computer’s taskbar.
- Double click.
- Right click to display the context menu and select “Safely Remove Hardware” from the context menu.
The Safely Remove Hardware dialog appears.

2 Select “Sony XDCAM PDW-680 IEEE 1394 SBP2 Device” and click “Stop”. The Stop a Hardware device dialog appears.

3 Select “Sony XDCAM PDW-680 IEEE 1394 SBP2 Device” and click “OK”. In Windows XP, “Sony XDCAM PDW-680 IEEE 1394 SBP2 Device” is deleted from the list of hardware devices. In Windows Vista, the message “This device can be safely removed from your computer.” appears. This unit can now resume normal operations. (The limitations described in “Operation limitations during FAM connections” on page 230 no longer apply.)

Operating on files

1 Start Explorer.
Check that a drive letter has been assigned to this unit. (The drive letter will differ depending on the number of other peripherals connected to the remote computer.)

2 Use Explorer to perform file operations on the disc loaded in this unit.
Disconnect the i.LINK cable as required.

For Windows 7

**Note**

Do not disconnect the cable before performing step 1.

1. Click the icon displayed in the remote computer's taskbar, and then click “Eject Solid state disk”.
   “The ‘Sony XDCAM PDW-680 IEEE 1394 SBP2 Device’ device can now be safely removed from the computer” appears. This unit can now resume normal operations. (The limitations described in “Operation limitations during FAM connections” no longer apply.)

2. Disconnect the i.LINK cable as required.

**To make a reconnection**

To reconnect after exiting file operations, do one of the following, depending on whether an i.LINK cable is connected.

**i.LINK cable is not connected:** Connect this unit and a remote computer with an i.LINK cable.

**i.LINK cable is connected:** Disconnect the i.LINK cable from either this unit or the remote computer, wait for at least 10 seconds, and then reconnect the disconnected cable.

The unit is powered off and an i.LINK cable is connected: Power the unit on.

---

### File Operations in File Access Mode (for Macintosh)

#### File access mode operating environment

Operating system requirements for file operations by file access mode are as follows.

**Computer operating system:** Mac OS X v10.4.11 or higher

#### Preparations

Do the following on the remote computer and this unit.

- Install the FAM driver on the remote computer (see the next item).
- Set i.LINK(FAM) on the POWER SAVE page of the OPERATION menu to ENABL (see page 207).

#### To install the FAM driver

Insert the (supplied) application software CD-ROM into the CD-ROM drive of your computer, and execute the FAM >Mac >dmg file of the FAM Driver, then follow the installation instructions.

#### To check the FAM driver version

Connect this unit to your computer with an i.LINK cable, and then, with a disc loaded, start the system profiler utility of the application. The version appears to the right of “prodisk_fs” when you select “Advanced Functions” under “Software”.

#### Making FAM connections

1. Insert a disc into this unit, and put this unit into the following state.
   - Recording, playback, search and other disc operations: Stopped
   - THUMBNAIL indicator: Off
   - Disc access by clip deletion, disc formatting, or other operation: Stopped
   - Picture Cache function and Interval Rec function: Off
Connections between this unit and a computer by the Live Logging function: Disconnected
Setting of LIVE LOGGING on the REC FUNCTION page of the OPERATION menu: Values other than VIEW (OFF or LIVE)
MENU ON/OFF switch: OFF
Unsaved current clip list: Save or clear

2 If this unit is connected to a remote computer by FTP, log out from the FTP session (see page 234).

3 Connect the (i.LINK) S400 connector on this unit to the i.LINK (IEEE1394) connector on the remote computer, using an i.LINK cable.
When a disc is inserted into this unit, the remote computer recognizes this unit as a removable disc. The following icon appears in the Finder on the remote computer, indicating that the computer is now able to perform file operations.

Operating on files

1 Start the Finder.
Check to be sure that a drive has been assigned to this unit.

2 Operate from the Finder on the files on the disc in this unit.
You can operate in the same way that you operate on local drives and files on network computers.

Exiting file operations

Note
Do not disconnect the cable before performing steps 1 and 2.

1 Eject the disc by clicking the eject button to the right of the icon for this unit in the Finder, or by dragging the icon for this unit from the Finder to the Trash.

2 Disconnect the i.LINK cable as required.

To make a reconnection
To reconnect after exiting file operations, do one of the following, depending on whether an i.LINK cable is connected.

i.LINK cable is not connected: Connect this unit and a remote computer with an i.LINK cable.
i.LINK cable is connected: The unit is mounted automatically, so you do not need to do anything.
The unit is powered off and an i.LINK cable is connected: Power the unit on.

Notes
- If you power this unit off during a FAM connection, the data transferred thus far is discarded.
- All file operations are not possible for some types of files.

For details, see “File operation restrictions” (page 224).

To eject discs from a remote computer
Click the eject button to the right of the icon for this unit in the Finder, or drag the icon for this unit from the Finder to the Trash.
FTP File Operations

File operations between this unit and a remote computer can be carried out by the File Transfer Protocol (called FTP below).

Preparations

1 Connect the network connectors of this unit and a remote computer with a network cable. Or connect this unit to the network to which the remote computer is connected.

2 On the NETWORK SETTING page of the MAINTENANCE menu, set the IP address and other network setting items for this unit. 1)

   For details on menu operations, see “Basic menu operations” on page 189.

   If network settings have already been made

   Check the IP address of this unit.

   1) This unit is able to acquire an IP address automatically from a DHCP server. It also supports an Auto-IP function to assign an IP address automatically when access from this unit to the DHCP server times out. You can check DHCP settings and the assigned IP address on the NETWORK 1 page of the MAINTENANCE menu.

   Note

   If this unit is directly connected to a computer running Windows Vista with a network cable, change the setting as follows:

   (1) Open “Network and Sharing Center” >“Manage network connections” >“Local Area Connection” in the control panel. (2) In the “Local Area Connection Properties”, uncheck the “Internet Protocol Version 6 (TCP/IPv6)”, and then click the OK button.

3 Turn the MENU knob to scroll to the POWER SAVE page of the OPERATION menu, then press the MENU knob.

4 Move ● to ETHERNET/USB then press the MENU knob.

5 Turn the MENU knob to select “ENABL”, then press the MENU knob.

Making FTP connections

FTP connections between this unit and a remote computer can be made with either of the following.

- The command prompt
- FTP client software

This section explains how to use the command prompt. For more information about using FTP client software, refer to the documentation of the FTP client software on your system.

To log in

If this unit is connected to a remote computer with a FAM connection, first exit file operations on the FAM connection (see page 230).

1 Load a disc into this unit and put the unit into the following state.

   Recording, playback, search, and other disc operations: Stopped
   THUMBNAIL indicator: Off
   Disc access by clip deletion, disc formatting, or other operation: Stopped
   Picture Cache function and Interval Rec function: Off
   Recording of video from external devices: Disabled
   Connections between this unit and a computer by the Live Logging function: Disconnected
   Setting of LIVE LOGGING on the REC FUNCTION page of the OPERATION menu: Values other than VIEW (OFF or LIVE)
MENU ON/OFF switch: OFF
Unsaved current clip list: Save or clear

Note
Login is not possible unless the unit is in the state described above.

2 Start the command prompt.

3 Enter “ftp <SP> <IP address>”, and press the Enter key. (<SP> refers to a space.)
For example, if the IP address of this unit is set to 192.168.001.010, enter “ftp 192.168.1.10”.
Refer to the Windows help for more information about the FTP command.

If the connection succeeds, you are prompted to enter a user name.

4 Enter the user name “admin” and press the Enter key.
When the user name is verified, your are prompted to enter a password.

5 Enter the password and press the Enter key.
The password is set to the model name (“pdw-680”) when the unit is shipped from the factory.
The login is complete when the password is verified.
See “Command list” (page 234) for the protocol supported by this unit.

If the connection times out
This unit terminates FTP connections if no command is received within 90 seconds of the last command. If this occurs, log out (see the next section) and repeat steps 2 to 4.

Note
If you power this unit off during an FTP connection, the data transferred thus far is discarded.

Command list
This unit supports standard protocol (see the next section), and extended protocol (see page 237).

Notes
• To execute FTP commands, you must install application software with FTP function on your computer.
• The commands supported by application software vary.
• An FTP client that supports UTF-8 is required to use Unicode characters other than ASCII characters. Command prompt FTP commands do not support UTF-8.

Standard commands
In the command syntax column, <SP> means a space, entered by pressing the space bar, and <CRLF> means a new line, entered by pressing the Enter key.

USER
Send this command to begin the login process.
Syntax: USER <SP> <username> <CRLF>
Input example: USER admin

PASS
After sending the USER command, send this command to complete the login process.
Syntax: PASS <SP> <password> <CRLF>
Input example: PASS pdw-680

QUIT
Terminates the FTP connection. If a file is being transferred, terminates after completion of the transfer.
Syntax: QUIT <CRLF>

PORT
Specifies the IP address and port to which this unit should connect for the next file transfer (for data transfer from this unit).
Syntax: PORT <SP> <h1,h2,h3,h4,p1,p2> <CRLF>
   h1 (most significant byte) to h4 (least significant byte): IP address
   p1 (most significant byte), p2 (least significant byte): Port address
Input example: PORT 10,0,0,1,242,48
   (IP address: 10.0.0.1, Port number: 62000)
PASV

This command requests this unit to “Listen” on a data port (which is not its default data port). It puts this unit into passive mode, waiting for the remote computer to make a data connection.

Syntax: PASV <CRLF>

TYPE

Specifies the type of data to be transferred.

Syntax: TYPE <SP> <type-code (options delimited by <SP>)> <CRLF>

$type-code$ can be any of the following. However, for XDCAM, data is always transferred as “I”, regardless of the type-code specification.
- A: ASCII
  - N: Non-print
  - T: Telnet format
  - C: ASA Carriage Control
- E: EBCDIC
  - N: Non-print
  - T: Telnet format
  - C: ASA Carriage Control
- I: IMAGE (Binary) (default)
- L: LOCAL BYTE
  - SIZE: byte size

Input example: TYPE I

STRU

Specifies the data structure.

Syntax: STRU <SP> <structure-code> <CRLF>

$structure-code$ can be any of the following. However, for XDCAM, the structure is always “F”, regardless of the structure-code specification.
- F: File structure (default)
- R: Record structure
- P: Page structure

Input example: STRU F

MODE

Specifies the transfer mode.

Syntax: MODE <SP> <mode-code> <CRLF>

$mode-code$ can be any of the following. However, for XDCAM, the mode is always “S”, regardless of the mode-code specification.
- S: Stream mode (default)
- B: Block mode
- C: Compressed mode

Input example: MODE S

LIST

Sends a list of files from this unit to the remote computer.

Syntax: LIST <SP> <options> <SP> <path-name> <CRLF>

$options$ can be any of the following.
- -a: Also display file names that begin with “·”.
- -F: Append “/” to directory names.

The following data is transferred, depending on whether $<path-name>$ specifies a directory or file.
- Directory specified: A list of the files in the specified directory
- File specified: Information about the specified file
- No specification: A list of the files in the current directory.

The wildcard characters “*” (any string) and “?” (any character) may be used in $<path-name>$.

Input example 1: LIST -a Clip
Input example 2: LIST Clip/*.MXF

NLST

Sends a list of file names from this unit to the remote computer, with no other information.

Syntax: NLST <SP> <options or path-name> <CRLF>

The following options may be specified when no path name is specified.
- -a: Also display file names that begin with “·”
- -I: Display information other than file name (gives the same result as the LIST command).
- -F: Append “/” to directory names.

The following data is transferred, depending on whether $<path-name>$ specifies a directory or file.
- Directory specified: A list of the file names only in the specified directory
- No specification: A list of the file names only in the current directory.

The wildcard characters “*” (any string) and “?” (any character) may be used in $<path-name>$.

Input example 1: NLST-I
Input example 2: NLST Clip/*.MXF

RETR

Begins transfer of a copy of a file in the specified path on this unit to the current directory on the remote computer.

Syntax: RETR <SP> <path-name> <CRLF>

Input example: RETR Clip/C0001.MXF
**FTP File Operations**

Chapter 8  File Operations

### STOR

Begins transfer of a copy of a file in the specified path on the remote computer to the current directory on this unit. Depending on the type of file transferred, the following items are created.

- **C* .MXF file** 1), 3)
  - C*M01.XML file (metadata)
  - C*M02.KLV file (user metadata)
  - C*S01.MXF file (proxy AV data)
  - For C* .MXF files, the UMID of the copy source file is not saved. However, it is saved if an immediately preceding SITE UMMD extended command has been issued.
- **E*E01.SMI file** 2), 3)
  - E*M01.XML file (metadata)

1) *: 0001 to 9999
2) *: 0001 to 0099
3) The unit can handle files with user-defined names in the “C*” and “E*” parts.

For details, see “File operation restrictions” (page 224).

**Syntax:** DELE <SP> <path-name> <CRLF>

**Input example:** DELE Clip/C0099.MXF

### STAT

Sends information about properties of the specified file, or about data transfer status, from this unit to the remote computer.

The following property information is sent, depending on the file type.

- **MXF file**
  - File name
  - File type
  - CODEC type
  - Frame rate
  - Number of audio channels
  - Duration
  - UMID
- **non-MXF file**
  - File name

**Syntax:** STAT <SP> <path-name> <CRLF>

The following data is transferred, depending on whether a file is specified with <path-name>.

- **File specified:** The properties of the specified file
- **No specification:** The size of the data transferred thus far (unit: bytes)

**Input example:** STAT Clip/C0001.MXF

### ABOR

Requests this unit to abort a file transfer currently in progress.

**Syntax:** ABOR <CRLF>

### SYST

Displays the system name of this unit.

**Syntax:** SYST <CRLF>

### HELP

Displays a list of the commands supported by this unit, or an explanation of the specified command.

**Syntax:** HELP <SP> <command-name> <CRLF>

The following data is transferred, depending on whether a command name is specified with <command-name>.

- **Command name specified:** Explanation of the specified command.
- **No specification:** Command list

### Notes

- For C* .MXF files, some data, such as file header metadata, may be missing.
- Depending on the transfer destination directory and the file type, transfer may not be possible.
- For C* .MXF files, the UMID of the copy source file is not saved. However, it is saved if an immediately preceding SITE UMMD extended command has been issued.

For details, see “File operation restrictions” (page 224).

**Syntax:** STOR <SP> <path-name> <CRLF>

**Input example:** STOR Edit/E0001E01.SMI
• **Input example:** HELP RETR

---

**NOOP**

Does nothing except return a response. (Used to check whether this unit is running.)

**Syntax:** NOOP <CRLF>

---

**PWD**

Displays the current directory (“/” if the directory is the root directory).

**Syntax:** PWD <CRLF>

---

**CWD**

Changes the current directory (moves from the current directory to another directory).

**Syntax:** CWD <SP> <path-name> <CRLF>

Moves to a directory as follows, depending on whether a directory is specified with <path-name>.
- Directory specified: To the specified directory
- No specification: To the root directory

**Input example:** CWD General

---

**CDUP**

Moves one level up in the directory structure (makes the parent of the current directory be the current directory).

**Syntax:** CDUP <CRLF>

---

**MKD**

Creates a new directory.

**Note**

Directories can be created only in the General directory.  
*For details, see “File operation restrictions” (page 224).*

**Syntax:** MKD <SP> <path-name> <CRLF>

---

**RMD**

Deletes a directory.

**Note**

Directories can be deleted only in the General directory.  
*For details, see “File operation restrictions” (page 224).*

**Syntax:** RMD <SP> <path-name> <CRLF>

---

**MDTM**

Acquires the date and time of the most recent modification of the file in the format “YYYYMMDDhhmms” (YYYY: year, MM: month, DD: day, hh: hour, mm: minute, ss: second).

**Note**

The date and time cannot be acquired in the following cases.
- When the path name includes a wildcard (“*”, replaced by any string of characters, or “?”, replaced by any single character).
- When the size of the path name is greater than 1023 bytes.

**Syntax:** MDTM <SP> <path-name> <CRLF>  
**Input example:** MDTM PROAV/DISCMETA.XML

---

**Extended commands**

In the command syntax column, <SP> means a space, entered by pressing the space bar, and <CRLF> means a new line, entered by pressing the Enter key.

**SITE REPF**

Sends an MXF file from the specified path on this unit to the remote computer. This command allows you to specify a segment in the body of the MXF file (composed of video and audio data), for transfer of the required segment only.

**Notes**

- A segment greater than the file size cannot be specified.
- This command cannot be used when the path name contains a space. Use the SITE REPFL command instead.

**Syntax:** SITE REPF <SP> <path-name> <SP> <start-frame> <SP> <transfer-size> <CRLF>

- **<start-frame>** specifies an offset from the start of the file. Data is transferred from the video frame at the offset (the first frame is 0).
- **<transfer-size>** specifies the number of video frames to transfer (specify 0 to transfer to the end of the file).

**Input example:** SITE REPF Clip/C0001.MXF 5 150 (Transfer C0001.MXF. Body data is transferred only from frame 6 to frame 150.)

---

**SITE REPFL**

Sends an MXF file from the specified path on this unit to the remote computer. This command allows you to...
specify a segment in the body of the MXF file (composed of video and audio data), for transfer of the required segment only.

**Note**

A segment greater than the file size cannot be specified.

**Syntax:** SITE REPFL <SP> "<path-name>" <SP> <start-frame> <SP> <transfer-size> <CRLF>

<path-name> specifies the path name of the file to transfer. Enclose the path name in double quotation marks.

<start-frame> specifies an offset from the start of the file. Data is transferred from the video frame at the offset (the first frame is 0).

<transfer-size> specifies the number of video frames to transfer (specify 0 to transfer to the end of the file).

**Input example:** SITE REPFL “Clip/sakura 0001.MXF” 5 (Transfer sakura 0001.MXF. Body data is transferred only from frame 6 to frame 150.)

**SITE FSTS**

Acquires the system status of this unit.

One of the following status codes is sent.

0: Initial state, or no disc is loaded.

1: File system mount is OK.

3: File system mount is not OK.

**Syntax:** SITE FSTS <CRLF>

**SITE MEID**

Acquires the media ID of the disc loaded in this unit.

**Syntax:** SITE MEID <CRLF>

**SITE FUNC**

Acquires the function and version of the expanded commands.

Information is sent in the following format.

<main function> <SP> <branch function> <SP> <branch function version>

For XDCAM, sent in a format like “200 MXF DISK 1” (200 is a response code).

**Syntax:** SITE FUNC <CRLF>

**SITE UMMD**

When C*.MXF file is sent with the STOR, the copy source UMID is saved if this command is invoked immediately before the STOR command.

**Syntax:** SITE UMMD <CRLF>

**SITE DF**

Acquires the amount of free disc space.

**Syntax:** SITE <SP> DF <CRLF>

**SITE CHMOD**

Locks and unlocks clips. Also sets permissions for directories and files in the General directory.

**Syntax:** SITE CHMOD <SP> <flag> <SP> <path-name> <CRLF>

Specify one of the following values in <flag>, according to the specification in <path-name>.

- When a clip is specified in <path-name>:
  - 444: Lock.
  - 666: Unlock.

- When a directory in the General directory is specified in <path-name>:
  - 555: Forbid writing to the directory.
  - 777: Allow writing to the directory.

- When a file in the General directory is specified in <path-name>:
  - 444: Forbid writing to and execution of the file.
  - 555: Forbid writing to the file, but allow execution.
  - 666: Allow writing to the file, but forbid execution.
  - 777: Allow writing to and execution of the file.

**Input example:** SITE CHMOD 444 Clip/C0001.MXF (Lock clip C0001.MXF)

**SITE TCPR**

Presets the starting timecode of a clip copied with the STOR command. Specify the timecode in the format “ffssmmhh” (ff: frames, ss: seconds, mm: minutes, hh: hours).

**Notes**

- This command remains in effect until a STOR command is executed, or (if no STOR command is executed) until the FTP connection is terminated.

- If a SITE UMMD command is executed after this command, the SITE UMMD command takes priority and this command is discarded.

- If this command is executed several times in sequence, the last command takes priority.

**Syntax:** SITE TCPR <SP> <timecode> <CRLF>

**Input example:** SITE TCPR 00050001 (The starting timecode is preset to 01:00:05:00.)
When you are connected to the unit by FAM or FTP, you can create new clips with timecode that is continuous with the timecode of the last frame of the last clip on the disc. To record continuous timecode, set PRESET/REGEN/CLOCK switch to “REGEN”, and then proceed as follows.

**FAM connection**
Write clip files to the unit from the computer or other device that is connected to this unit.

**FTP connection**
Use the “STOR” command to transfer clip files from the computer that is connected to this unit. If you issue the “SITE UMMD” command immediately before the “STOR” command, the original timecode of the transferred file is recorded, regardless of the setting of PRESET/REGEN/CLOCK switch.
Testing the Camcorder before Shooting

Check the functions of the camcorder before setting out for a shooting session, preferably by operating the camcorder together with a color video monitor.

Preparations for testing

1. Attach a fully charged battery pack.
2. Set the POWER switch to ON and check that the HUMID indicator does not appear and that the BATT indicator shows at least five segments.
   - If the HUMID indicator appears, wait until it disappears.
   - If the BATT indicator does not show at least five segments, replace the battery pack with a fully charged one.
3. Check that there are no obstructions near the disc compartment, and then press the EJECT button to open the disc compartment lid.
4. After confirming that the disc is not write-protected, load the disc and close the disc compartment lid.

Testing the camera

Set the switches and selectors as follows.

1. Iris switch: Automatic
2. Zoom selector: SERVO/MAN
3. VDR SAVE/STBY switch: SAVE
4. GAIN selector: Set as low as possible
5. OUTPUT/DCC switch: BARS
6. WHITE BAL switch: A or B

Testing the viewfinder

1. Adjust the position of the viewfinder.
2. Check that the color bars are displayed on the viewfinder screen, and adjust the BRIGHT, CONTRAST, and PEAKING controls to give the best color bar display.
Check each of the following operations.
- The menu is displayed on the viewfinder screen.
- Turn the MENU knob and check that the menu page changes to the next page.
- Press the MENU knob and check that settings of each item of the selected page are displayed.
- Turn the MENU knob and check that a moves within the page.
- Press the MENU knob and check that a placed before the item changes to b and b placed before the setting of the item changes to ?.
- Turn the MENU knob and check that the setting of the selected item changes.

Set the OUTPUT/DCC switch to CAM, and change the FILTER selector position in the sequence of 1, 2, 3 and 4.
Check that the FILTER indicator on the viewfinder screen displays the correct numbers.

Carry out the following operations, and check that the ! indicator lights if the corresponding item has been turned on on the ‘!’ LED page of the USER menu.
- Set the gain to anything but 0 dB by using the GAIN selector and the GAIN SW page of the OPERATION menu.
- Set the SHUTTER selector to ON.
- Set the WHITE BAL switch to PRST.
- Use the lens extender.
- Set the reference value of the auto iris to other than the standard value.

Flick the SHUTTER selector from ON to SELECT repeatedly, and check that the shutter setting changes on the viewfinder screen.

Pointing the camera at a suitable subject, focus the camera and check the picture on the viewfinder screen.

Set both of the AUDIO IN switches to FRONT, and check that when sound is input to a microphone connected to the MIC IN connector on the front of the camcorder, the audio level indicators appear on the viewfinder screen.

Check that setting the ZEBRA switch to ON and OFF makes the zebra pattern appear and disappear on the viewfinder screen.

The results of checking in steps 3 to 9 may not be as expected, depending on the settings relating to the viewfinder display function. In this case, set the desired items on the VF DISP 1 and VF DISP 2 pages of the USER menu.

For details, see “Selecting the display items” on page 197.

Testing the iris and zoom functions

Set the zoom to automatic zoom mode and check that the power zoom operates correctly.

Set the zoom to manual zoom mode and check the zoom functions manually.

Set the iris switch on the lens to AUTO and point the camera at objects of different brightness. Check that the automatic iris adjustment operates correctly.

Set the iris switch on the lens to MANUAL and check that turning the iris ring manually adjusts the iris correctly.

Set the iris switch on the lens back to AUTO and check the following points when the GAIN selector is moved from L to M to H.
- Even when the brightness of the object does not change, the iris is automatically adjusted in accordance with the change in the gain setting.
- The gain indicator on the viewfinder screen changes to correspond to the change in setting.
If an extender mechanism is incorporated in your lens, put the extender lever of the lens into the 2x position and check the following points.

- The indication “EX” appears at the top left on the viewfinder screen.
- The auto iris functions correctly.

**Testing the VDR**

Perform tests (1) to (7) consecutively.

(1) Testing the recording and playback functions

1. Set the VDR SAVE/STBY switch to SAVE and check that the SAVE indicator in the viewfinder goes on.

2. Set the VDR SAVE/STBY switch to STBY and check that the SAVE indicator in the viewfinder goes off.

3. Set the switches located below the color LCD as follows.
   - BRIGHT button: H, M or L
   - DISP SEL/EXPAND button: STATUS
   - DISPLAY switch: COUNTER

4. Set the PRESET/REGEN/CLOCK switch to PRESET, and set the F-RUN/SET/R-RUN to R-RUN.

5. Press the REC START button and check the following points.
   - The indication in the counter display on each of the LCD monitor and monochrome LCD is changing.
   - The REC indicator in the viewfinder is on.
   - The RF and SERVO indicators on the color LCD are off.

6. Press the REC START button again. Check that recording stops and that the REC indicator in the viewfinder goes off.

7. Repeat the checks of steps 5 and 6, this time using the VTR button on the lens. Press the RESET/RETURN button and check that the indication in the counter display on each of the LCD monitor and monochrome LCD is “00:00:00:00”.

8. Press the F REV button, then press the PLAY/PAUSE button. Check that fast reverse playback and normal playback are performed.

9. Press the STOP button, then press the F FWD button. Check that playback stops and fast forward playback are performed.

10. Press the STOP button again, then press the PREV button. Check that the image of the beginning of the current or previous clip is displayed.

11. Press the NEXT button, and check that the image of the beginning of the next clip is displayed.

(2) Testing the automatic audio level adjusting functions

1. Set the AUDIO IN CH-1/CH-2 switches to FRONT.

2. Set the AUDIO SELECT (CH-1/CH-2) switches to AUTO.

3. Set the AUDIO IN CH-3/CH-4 switches to F (FRONT).

4. Aim the microphone connected to the MIC IN connector at a suitable sound source. Check that the level indications for channels 1 to 4 correspond to the sound level, respectively.

(3) Testing the manual audio level adjusting functions

1. Set the AUDIO IN CH-1/CH-2 switches to FRONT.

2. Turn the MIC LEVEL control. Check that the channel-1 and -2 audio level meters on the LCD monitor and monochrome LCD show more and more segments as you turn the control counterclockwise as seen from the front of the camcorder.
(4) Testing the earphone and speaker

1. Turn the MONITOR volume control and check that the speaker volume changes accordingly.
2. Connect an earphone to the front or rear EARPHONE jack.
3. Check that the speaker sound is cut off and that you can hear the sound from the microphone in the earphone.
4. Turn the MONITOR volume control and check that the earphone volume changes accordingly.
5. Connect the earphone to the other EARPHONE jack. Check the earphone as in step 3.

(5) Testing external microphones

1. Connect external microphones to the AUDIO IN CH1/CH2 connectors.
2. Set the +48V/OFF switches as follows.
   - If the connected microphone is of the internal power supply type, set the switch to OFF.
   - If the connected microphone is of the external power supply type, set the switch to +48V.
3. Set the AUDIO IN switches to REAR.
4. Aim the microphones at a sound source.
5. Check that the audio level meters on the LCD monitor and monochrome LCD and the audio level indicators in the viewfinder reflect the changing sound level.

(6) Checking the XLR connection automatic detection function

Before starting to check, remove the front microphone connected to the MIC IN connector if it is connected.

1. Perform the operations of steps 1 and 2 explained in “(5) Testing external microphones”.
2. Set the AUDIO IN CH-1/CH-2 switches to FRONT.
3. Perform the operations of steps 4 and 5 explained in “(5) Testing external microphones”. If the audio level meters on the color and monochrome LCDs and the audio level indicators in the viewfinder reflect the changing sound level, the function of the XLR connection automatic detection is working correctly. If it does not reflect the changing sound level, the function of the XLR connection automatic detection function is off. Set REAR XLR AUTO to “ON” on the VDR MODE 1 page of the MAINTENANCE menu. If it does not reflect even after making this setting, the XLR connection automatic detection function does not work correctly.

(7) Checking the user bit and timecode functions

1. Set the user bits as required. For the operation, see “Setting the user bits” on page 67.
2. Set the timecode. For the operation, see “Setting the timecode” on page 67.
3. Set the F-RUN/SET/R-RUN switch to R-RUN.
4. Press the REC START button, and check that recording starts and that the timecode indication in the counter display changes.
5. Press the REC START button again, and check that recording stops and that the timecode indication stops changing.
6 Set the F-RUN/SET/R-RUN switch to F-RUN, and check that the timecode indication starts changing again and continues to change even when you restart recording and stop recording again.

7 Set the DISPLAY switch to U-BIT, and check that the user bit data that was set is displayed.

**Maintenance**

**Cleaning the viewfinder**

Use a dust blower to clean the CRT screen and mirror inside the viewfinder barrel.

Clean the lens and protecting filter with a commercially available lens cleaner.

**Caution**

Never use organic solvents such as thinners.

**Disassembling the eyepiece for cleaning**

1 Detach the eyepiece from the viewfinder barrel.

   *For the detaching procedure, see “Detaching the eyepiece” on page 37.*

2 Remove the eyecup from the eyecup holder.

3 Remove the protecting filter, together with the packing ring, from inside the eyecup holder.

4 Detach the protecting filter from the packing ring.
**Fog-proof filter**

Depending on the temperature and humidity, the protecting filter may mist because of vapor or your breath. To ensure that the viewfinder is always clear, replace the protecting filter with a fog-proof filter (option, part No. 1-547-341-11).

**Fitting the fog-proof filter**

Replace the protecting filter on the packing ring with the fog-proof filter. Be sure to correctly assemble the fog-proof filter, the packing ring, and the eyecup so that the reassembled eyepiece is waterproof.

**Note**

When cleaning the fog-proof filter, wipe it very gently with a soft cloth to avoid damaging the anti-fogging coating.

**Note about the battery terminal**

The battery terminal of this unit (the connector for battery packs and AC adaptors) is a consumable part. Power may not be supplied to the unit properly if the pins of the battery terminal are bent or deformed by shock or vibrations, or if they become corroded due to prolonged outdoor use. Periodic inspections are recommended to keep the unit working properly and to prolong its usable lifetime. Contact a Sony service or sales representative for more information about inspections.
If a problem occurs when the camcorder is powered or is being operated, a warning is issued by various visible and audible indicators. These visible and audible indicators are:

- In the status display on the LCD monitor: a warning message (“A” in the “Layout of the table of warning messages” below) and a warning indication (“B”)
- The WARNING indicator on the side panel of the camcorder (“C”), and a warning sound from the speaker and earphones (“D”)
- In the viewfinder: a warning message (“A”), and an indicator above or below the viewfinder screen (“E”)

The volume of the warning sound can be adjusted with the ALARM knob. Set the ALARM knob to the minimum position to suppress the sound.

**Layout of the table of warning messages**

<table>
<thead>
<tr>
<th>Warning indication</th>
<th>State</th>
<th>WARNING indicator</th>
<th>Warning sound</th>
<th>REC/TALLY</th>
<th>BATT</th>
</tr>
</thead>
<tbody>

---

**Operation/Alarm Messages**

Operation and alarm messages are displayed in the operation/alarms message display area (see page 31) of the viewfinder screen.

#### Notes

- Asterisks (*) are replaced by digits in the display.
- During recording
- During playback, fast forward, fast reverse, or stop
- During recording pause
- 1 flash/s
- 4 flashes/s
- During recording, displayed in the LCD monitor only (When the DISP SEL/EXPAND button is set to STATUS)
- During recording and recording pause, displayed in the LCD monitor only (When the DISP SEL/EXPAND button is set to STATUS)

*For details about the warning displays and alarm messages on the viewfinder, see the next item.*
# Chapter 9  Maintenance

## Operation Warnings

<table>
<thead>
<tr>
<th>Warning</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>a)</strong> Contact a Sony service representative to replace the battery.</td>
<td></td>
</tr>
<tr>
<td>VDR operation messages are displayed in the setting change and adjustment progress message display area of the viewfinder screen (see page 30). Take the actions listed in the following table.</td>
<td></td>
</tr>
<tr>
<td><strong>AUTO INTERVAL <strong>M</strong>S</strong></td>
<td>The unit is operating in Auto Interval Rec mode (<strong>M</strong>S: Indicates the shooting interval in minutes and seconds).</td>
</tr>
<tr>
<td>**MANU INTERVAL <strong>FRAME</strong></td>
<td>The unit is operating in the single-shot mode of Manual Interval Rec mode (<strong>FRAME</strong>: Indicates the number of frames recorded in one shot).</td>
</tr>
<tr>
<td>**INTERVAL **S (M/H) <strong>FRAME</strong></td>
<td>The unit is operating in the consecutive mode of Manual Interval Rec mode (<strong>S (M/H)</strong>: Indicates the trigger interval, in seconds (minutes or hours), <strong>FRAME</strong>: Indicates the number of frames recorded in one shot).</td>
</tr>
<tr>
<td><strong>LOW LIGHT</strong></td>
<td>Depending on the setting, the subject illumination is inadequate.</td>

</tr>
<tr>
<td><strong>M. access!</strong></td>
<td>An attempt was made to switch GUI screens during a USB flash drive write operation.</td>
</tr>
</tbody>
</table>

**Cannot Expand Clip any Further.**

The clip cannot be expanded into more blocks. This alarm appears when the DISP SEL/EXPAND button is pressed when the number of blocks is maximum, or when the duration of an expanded thumbnail is one frame.

**Selected Essence Mark Does not Exist.**

The selected essence mark does not exist. This alarm appears in the essence mark selection screen when the specified essence mark does not exist on the disc.

**Sub Clip is Invalid. Set Appropriate IN/OUT Points.**

The temporal relationship between the specified In and Out points in a TRIM operation (see page 125) is not correct. Reset so that the value of the Out point timecode is larger than the value of the In point timecode.

**Duration of One Clip List must be Less than 24 Hours.**

The total duration of the current clip list exceeds the upper limit of 24 hours as the result of an Add Sub Clips (see page 123) or Trim Sub Clip (see page 125) operation.

**No More Sub Clips can be Added to the Clip List.**

The total number of the sub clips of the current clip list exceeds the upper limit of 300 as the result of an Add Sub Clips (see page 123) or Trim Sub Clip (see page 125) operation.

**Sub Clip does not Exist.**

An attempt is made to execute a Move Sub Clips (see page 124), Trim Sub Clip (see page 125), Delete Sub Clips (see page 125), or Set Start Time Code (see page 126) operation with no sub clips in the current clip list.
<table>

</tr>
<tr>
<td>No Clip Meets the Condition.</td>
<td>No clip meeting the clip filtering conditions was found.</td>
</tr>
</tbody>
</table>
Important Notes on Operation

Use and storage

Do not subject the unit to severe shocks
The internal mechanism may be damaged or the body warped.

Do not cover the unit while operating
Putting a cloth, for example, over the unit can cause excessive internal heat build-up.

After use
Always turn off the POWER switch.

Before storing the camcorder for a long period
Remove the battery pack.

Shipping
• Remove the disc before transporting the unit.
• If sending the unit by truck, ship, air or other transportation service, pack it in the shipping carton of the unit.

Care of the unit
Remove dust and dirt from the surfaces of the lenses or optical filters using a blower.
If the body of the unit is dirty, clean it with a soft, dry cloth. In extreme cases, use a cloth steeped in a little neutral detergent, then wipe dry. Do not use organic solvents such as alcohol or thinners, as these may cause discoloration or other damage to the finish of the unit.

In the event of operating problems
If you should experience problems with the unit, contact a Sony representative.

Use and storage locations
Store in a level, ventilated place. Avoid using or storing the unit in the following places.
• In excessive heat or cold (operating temperature range: –5°C to +40°C (+23°F to +104°F))
• Remember that in summer in warm climates the temperature inside a car with the windows closed can easily exceed 50°C (122°F).
• In damp or dusty locations
• Locations where the unit may be exposed to rain
• Locations subject to violent vibration
• Near strong magnetic fields
• Close to radio or TV transmitters producing strong electromagnetic fields.
• In direct sunlight or close to heaters for extended periods

To prevent electromagnetic interference from portable communications devices
The use of portable telephones and other communications devices near this unit can result in malfunctions and interference with audio and video signals.
It is recommended that the portable communications devices near this unit be powered off.

Note on laser beams
Laser beams may damage the CMOS image sensors.
If you shoot a scene that includes a laser beam, be careful not to let the laser beam be directed into the lens of the camera.

Condensation
If you move the camcorder from a very cold place to a warm place, or use it in a damp location, condensation may form on the optical pickup.
Then, if the camcorder is operated in this state, recording and playback may not be performed properly.
Do the following to prevent this from happening.
• When you move or operate the camcorder in an environment where condensation may form, be sure to load a disc in advance and close the disc compartment lid.
• Whenever you turn on the power, check that the HUMID indicator does not appear on the color LCD. If it appears, wait until it disappears before loading a disc.

For details, see “Loading and unloading a disc” on page 72 and “Operation Warnings” on page 246.
Fitting the zoom lens

It is important to fit the lens correctly, as otherwise damage may result. Be sure to refer to the section “Mounting the Lens” on page 40.

Viewfinder

- Do not leave the unit with the eyepiece pointing directly at the sun. The eyepiece lens can concentrate the sun’s rays and melt the interior of the viewfinder.
- Do not use the viewfinder close to strong magnetic fields. This can cause picture distortion.

On Burn-in (when using a viewfinder with a built-in OLED panel)

Due to the characteristics of the material used in the OLED panel for its high-precision images, permanent burn-in may occur if still images are displayed in the same position on the screen continuously, or repeatedly over extended periods.

About the LCD panels

LCD panels are manufactured with extremely high-precision technology that yields effective pixel rates of 99.99% or higher. However, very rarely, one or more pixels may be permanently dark or permanently lit in white, red, blue, or green.
This phenomenon is not a malfunction. Such pixels have no effect on the recorded data, and the unit may be used with confidence even if they are present.

Phenomena specific to CMOS image sensors

The following phenomena that may appear in images are specific to CMOS image sensors. They do not indicate malfunctions.

White flecks

Although the CMOS image sensors are produced with high-precision technologies, fine white flecks may be generated on the screen in rare cases, caused by cosmic rays, etc.
This is related to the principle of CMOS image sensors and is not a malfunction.

The white flecks especially tend to be seen in the following cases:
- When operating at a high environmental temperature
- When you have raised the master gain (sensitivity)

The problem may be alleviated by executing the APR (automatic pixel noise reduction) function on the APR page of the MAINTENANCE menu (see page 179). Pixel noise is reduced to some extent by automatic black balance adjustment (see page 54), but the detection capabilities of that function are limited. For the most effective correction, execute the APR function.
If “No More White Pixel” appears after the APR function is executed, then there are no more detectable white flecks.

In SLS mode, white flecks are more prominent when you set the shutter speed (number of frames) to higher values. Executing the APR(SLS) function on the APR page (see page 179) may alleviate the problem of white flecks in SLS mode.

Aliasing

When fine patterns, stripes, or lines are shot, they may appear jagged or flicker.

Flicker

If recording is made under lighting produced by discharge tubes, such as fluorescent, sodium, or mercury-vapor lamps, the screen may flicker, colors may vary, or horizontal stripes may appear distorted.

In such cases, set the flicker-reduction function to auto mode (see page 183).
If the frame rate selected for recording is close to the power-supply frequency, flicker may not be reduced sufficiently even if you activate the Flicker-Reduction function. In such cases, use the electronic shutter.
Focal plane
Owing to the characteristics of the pickup elements (CMOS image sensors) for reading video signals, subjects that quickly move across the screen may appear slightly skewed.

Flash band
The luminance at the top and bottom of the screen may change when shooting a flashlight beam or a light source that quickly flashes. You can use the supplied application software to correct clips that contain frames with flash bands.

Specifications

General

Mass
Approx. 4.3 kg (9 lb 8 oz) (body)
Approx. 6.0 kg (13 lb 4 oz) (with VF, Mic, Disc, BP-GL95 battery)

Power Requirements
DC 12 V +5.0 V/–1.0 V

Power Consumption
Approx. 35 W (while recording, without options, color LCD on)
Approx. 39 W (while recording, with viewfinder, color LCD on, manual lens, microphone)

Note
Do not allow the total power consumption of peripherals to exceed 60 W when peripherals are connected.

Operating Temperature
–5°C to +40°C (23°F to 104°F)

Storage Temperature
–20°C to +60°C (–4°F to +140°F)

Humidity
10% to 90% (relative humidity)

Continuous Operating Time
Approx. 135 min with BP-GL95 battery

Recording Format (Video)
MPEG HD422 (CBR: 50 Mbps)
MPEG HD:
- HQ mode (VBR, 35 Mbps max.)
- SP mode (CBR, 25 Mbps),
- LP mode (VBR, 18 Mbps max.)
  (playback only)
MPEG IMX (CBR, 50/40/30 Mbps)
DVCAM (CBR, 25 Mbps)

Recording Format (Audio)
MPEG HD422: 4 ch/24 bits/48 kHz
MPEG HD: 4 ch/16 bits/48 kHz
MPEG IMX: 4 ch/24 bits/48 kHz or 4 ch/16 bits/48 kHz
DVCAM: 4 ch/16 bits/48 kHz

Recording Format (Proxy Video)
MPEG-4

Recording Format (Proxy Audio)
A-law (4 ch/8 bits/8 kHz)

Recording/Playback Time (MPEG HD422)
50 Mbps:
Approx. 95 min (PFD50DLA)
Approx. 43 min (PFD23A)

Recording/Playback Time (MPEG HD)
35 Mbps, 4-ch audio:
More than 145 min (PFD50DLA)
More than 65 min (PFD23A)
35 Mbps, 2-ch audio (playback only):
More than 150 min (PFD50DLA)
More than 68 min (PFD23A)
25 Mbps, 4-ch audio:
Approx. 190 min (PFD50DLA)
Approx. 85 min (PFD23A)
25 Mbps, 2-ch audio (playback only):
Approx. 200 min (PFD50DLA)
Approx. 90 min (PFD23A)
18 Mbps, 4-ch audio (playback only):
More than 248 min (PFD50DLA)
More than 112 min (PFD23A)
18 Mbps, 2-ch audio (playback only):
More than 265 min (PFD50DLA)
More than 122 min (PFD23A)

Recording/Playback Time (MPEG IMX)
50 Mbps:
Approx. 100 min (PFD50DLA)
Approx. 45 min (PFD23A)
40 Mbps:
Approx. 120 min (PFD50DLA)
Approx. 55 min (PFD23A)
30 Mbps:
Approx. 150 min (PFD50DLA)
Approx. 68 min (PFD23A)

Recording/Playback Time (DVCAM)
25 Mbps:
Approx. 185 min (PFD50DLA)
Approx. 85 min (PFD23A)

### Supplied accessories

Shoulder strap (1)
Stereo microphone (1)
Operation Guide (1)
CD-ROM manual (1)
(Supplied) application software CD-ROM (1)

### Recommended additional equipment

#### Power supply and related equipment

- BP-GL65/GL95/L60S/L80S Battery Pack
- BC-L160/L500/L70 Battery Charger
- AC-DN10/DN2B AC Adaptor

#### Viewfinder and related equipment

- HDVF-20A/200/C35W/C30WR Viewfinder
- BKW-401 Viewfinder Rotation Bracket

**Note**
Contact a Sony service representative for information about the viewfinders able to use the BKW-401.

#### Equipment for remote control

- RM-B170/B750 Remote Control Unit

**“Memory Stick”**

- “Memory Stick”
- “Memory Stick PRO” (4 GB or less)
- “Memory Stick Duo”
- “Memory Stick PRO Duo”

#### Audio equipment

- ECM-680S Stereo/Monaural Microphone
- ECM-678/674 Monaural Microphone
- CAC-12 Microphone Holder
- DWR-S01D Digital Wireless Receiver
- WRR-855S UHF Synthesized Tuner Unit

### Other Equipment

**Built-in LCD Monitor**
3.5-inch type color LCD monitor
Specifications

WRR-860A/861/862 UHF Synthesized Diversity Tuner
WRT-850/860 UHF Synthesized Transmitter
DWT-B01 Digital Wireless Transmitter
DMX-P02 Portable Digital Mixer

Expansion boards and upgrade software
CBK-HD01 HD/SD SDI Input Board
CBK-SC02 Analog Composite Input Board
CBKZ-UPG01 Software Upgrade Key

Other peripheral devices
CBK-WA01 Wi-Fi Adapter

Equipment for maintenance and easier handling
LC-H300 Hard Carrying Case
LC-DS300SFT Soft Carrying Case
VCT-14 Tripod Adaptor
Maintenance Manual

Design and specifications are subject to change without notice.

Notes

- Always make a test recording, and verify that it was recorded successfully.
SONY WILL NOT BE LIABLE FOR DAMAGES OF ANY KIND INCLUDING, BUT NOT LIMITED TO, COMPENSATION OR REIMBURSEMENT ON ACCOUNT OF FAILURE OF THIS UNIT OR ITS RECORDING MEDIA, EXTERNAL STORAGE SYSTEMS OR ANY OTHER MEDIA OR STORAGE SYSTEMS TO RECORD CONTENT OF ANY TYPE.
- Always verify that the unit is operating properly before use. SONY WILL NOT BE LIABLE FOR DAMAGES OF ANY KIND INCLUDING, BUT NOT LIMITED TO, COMPENSATION OR REIMBURSEMENT ON ACCOUNT OF THE LOSS OF PRESENT OR PROSPECTIVE PROFITS DUE TO FAILURE OF THIS UNIT, EITHER DURING THE WARRANTY PERIOD OR AFTER EXPIRATION OF THE WARRANTY, OR FOR ANY OTHER REASON WHATSOEVER.
a) The carrying case is large enough to hold the camcorder with lens and microphone mounted. However, remove them if they protrude more than 25 cm from the front of the main unit.
The following Sony USB flash drives are recommended for use with this unit.

**Pocket Bit L Series**
- USM16GL
- USM8GL
- USM4GL

**Pocket Bit Hi-Speed LX Series**
- USM16GLX
- USM8GLX
- USM4GLX (available in Japan only)

**Note**
USB flash drives other than the recommended flash drives listed above may not be recognized when connected to the USB connector.

About a “Memory Stick”

Precautions

- Do not attach anything other than the supplied label to the “Memory Stick” labeling position.
- Attach the label so that it does not stick out beyond the labeling position.
- Carry and store the “Memory Stick” in its case.
- Do not touch the connector of the “Memory Stick” with anything, including your finger or metallic objects.
- Do not strike, bend, or drop the “Memory Stick”.
- Do not disassemble or modify the “Memory Stick”.
- Do not allow the “Memory Stick” to get wet.
- Do not use or store the “Memory Stick” in a location that is:
  - Extremely hot, such as in a car parked in the sun
  - Under direct sunlight
  - Very humid or subject to corrosive substances
- To prevent data loss, make backups of data frequently. In no event will Sony be liable for any loss of data.
- Unauthorized recording may be contrary to the provisions of copyright law. When you use a “Memory Stick” that has been pre-recorded, be sure that the material has been recorded in accordance with copyright and other applicable laws.
