SD record and playback software
option key for PDW-700

Overview

MPEG IMX and DVCAM record and playback software for the PDW-700 XDCAM HD422 camcorder

This software key enables the PDW-700 to record and playback standard definition signals on the XDCAM disk as MPEG IMX or DVCAM MXF files. Without this key, the PDW-700 will up convert an SD input signal and record it as an HD MXF file.

SD record and playback software

Allows the PDW-700 to record and playback SD (MPEG IMX and DVCAM), in a variety of frame frequencies.

Features

SD record and playback software

Allows the PDW-700 to record and playback SD (MPEG IMX and DVCAM), in a variety of frame frequencies.
