

HKC-VND50

Variable ND filter unit

Overview

The HKC-VND50 facilitates smooth transitions between different lighting conditions without any visible physical filters, thereby ensuring seamless ND filter switching. It can also switch between deep/shallow depth of field, making it ideal for sports applications that require capturing fast-paced action and dramatic shots.

Features

Virtual IRIS

Virtual IRIS allows users to take control of Sony camera system's exposure settings. This enables adjustment to brightness between lens IRIS/variable ND/master GAIN using a single joystick.

Seamless ND filter switching

Seamless ND filter switching without any visible physical filters. This allows for smooth transitions between different lighting conditions without any disruption to the broadcast. Additionally, it is switchable between deep/shallow depth of field, making it well-suited for sports applications where capturing fast-paced action and dramatic shots is essential. The variable ND filter unit allows for smooth exposure adjustments without affecting image quality.

Compatible models

Customers can install HKC-VND50 on compatible models.
