PWSK-4504

SDI Interface Board

Overview

Interconnecting an SDI signal with external devices via existing coax infrastructure

The PWS-4504 is an optional SDI interface board that adds SDI I/O interfaces to the PWS-4500 live server. The PWS-4500 is equipped with the two SDI interface boards as standard, which handles up to four HD I/O signals or up to two 4K I/O signals (when additionally installed the PWSL-HR45 4K/HD Cut Out software). Up to two PWSK-4504 boards can be installed, which enables to handle up to eight HD I/O signal or up to four 4K I/O signals (when additionally installed the PWSL-HR45 4K/HD Cut Out Software).

Providing additional SDI input and output terminals to the PWS-4500

Newly Designed SDI Interface (I/O's) Board for PWS-4500
